### **Sample Code**

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at [www.netsuite.com/tos](http://www.netsuite.com/tos).

Oracle may modify or remove sample code at any time without notice.

### **No Excessive Use of the Service**

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

### **Beta Features**

Oracle may make available to Customer certain features that are labeled "beta" that are not yet generally available. To use such features, Customer acknowledges and agrees that such beta features are subject to the terms and conditions accepted by Customer upon activation of the feature, or in the absence of such terms, subject to the limitations for the feature described in the User Guide and as follows: The beta feature is a prototype or beta version only and is not error or bug free and Customer agrees that it will use the beta feature carefully and will not use it in any way which might result in any loss, corruption or unauthorized access of or to its or any third party's property or information. Customer must promptly report to Oracle any defects, errors or other problems in beta features to [support@netsuite.com](mailto:support@netsuite.com) or other designated contact for the specific beta feature. Oracle cannot guarantee the continued availability of such beta features and may substantially modify or cease providing such beta features without entitling Customer to any refund, credit, or other compensation. Oracle makes no representations or warranties regarding functionality or use of beta features and Oracle shall have no liability for any lost data, incomplete data, re-run time, inaccurate input, work delay, lost profits or adverse effect on the performance of the Service resulting from the use of beta features. Oracle's standard service levels, warranties and related commitments regarding the Service shall not apply to beta features and they may not be fully supported by Oracle's customer support. These limitations and exclusions shall apply until the date that Oracle at its sole option makes a beta feature generally available to its customers and partners as part of the Service without a "beta" label.

# Employee Management

NetSuite provides you with the tools that you need to manage your employees. You can:

- Add employee records to NetSuite. For more information, see [Employee Information Management](#).
- Give employees access to NetSuite. For more information, see [Giving an Employee Access to NetSuite](#).
- Log employee expenses and purchase requests. For more information, see [Expense Reports and Purchase Requests](#).
- Track employees' time with the Time Tracking feature. For more information, see [Managing Time Tracking](#).

NetSuite also offers SuitePeople, a comprehensive and integrated Human Capital Management (HCM) solution. SuitePeople enables Human Resources professionals to manage employees within NetSuite, thus eliminating repetitive and manual processes with one source of where employee data is kept.

For more information, see [SuitePeople Overview](#). For more information about SuitePeople, contact your NetSuite account manager.

# SuitePeople Overview

NetSuite now offers SuitePeople, a comprehensive and integrated Human Capital Management (HCM) solution. SuitePeople eliminates repetitive and manual processes by providing one source for employee data. This enables Human Resource (HR) professionals to efficiently manage employees within NetSuite.

At the same time, SuitePeople empowers employees and managers with self-service functionality to complete most everyday tasks. SuitePeople leverages NetSuite to provide customizable workflows tailored for how you do business.

SuitePeople provides the following:

- **Time-Off Management** – Create and manage time-off plans, and assign them to employees. Employees can request time off and view the status of their requests in the Employee Center. Managers can review and approve time-off requests either from an email message or from the Employee Center.
- **Effective Dating for Employee Information** – Edit the employee record as of a certain date, whether in the past, present, or future.
- **Job Management** – Track different job types within your organization.
- **Kudos** - Recognize the achievements of your coworkers.
- **Effective Dating for Employee Information** – Browse your organization's structure, and search for employees, filtering by location, department, and other parameters.
- **Employee Center Dashboard Publishing** - Create a standard Employee Center dashboard for your organization. This includes a dashboard specifically designed for supervisors and managers.
- **News Items** - Create and share company news with your employees. News items appear on the Company News portlet in the Employee Center.
- **Tracking an Employee's Compensation** - Track basic wage and salary information on the employee record, and, if applicable, integrate compensation with NetSuite Payroll.
- **Advanced Employee Permissions** - Use employee permissions that give you more control and flexibility over which fields and sublists on the employee record are available to NetSuite roles.
- **Workforce Analytics** - Measure and analyze headcount and turnover trends in your company.
- **Employee Reports** - Use reports to keep you up to date with time-off balances, payroll, employee change history, and more.
- **Employee Offboarding** - Manage the offboarding of employees, including the creation of custom termination reasons.
- **Compliance** - Ensure that your organization is compliant with government regulations, such as the Affordable Care Act.

For more information about SuitePeople, contact your NetSuite account manager.

**Note:** For information about recent changes to SuitePeople features, see [What's New in SuitePeople](#).

## What's New in SuitePeople

### Time-Off Tracking SuiteApp

Version 1.05, released on November 14, 2017, includes the following improvements:

- The Time-Off Request page has improved load times.
- Fields are no longer overlapping on the Time-Off Summary page.
- Issues with selecting a partial day when requesting time-off have been resolved.

Version 1.04, released on October 24, 2017, included the following improvements:

- Managers or approvers can now provide comments when rejecting a time-off request.
- Time-off requests can be approved or rejected from the email notification that the approver receives. The approver must be signed into NetSuite in a browser.
- Notification emails for time-off requests and approvals appeared to come from an incorrect sender. In 1.04.1, they now come from the appropriate user, the requester or the approver.

## SuitePeople Permission Requirements

**Note:** If you want more control over what employee information is accessible by different NetSuite users you can use the Advanced Employee Permissions feature. When this feature is enabled, you can use the employee permissions that come with this feature, which give you more control over what employee information certain roles can access. You can also customize employee permission that include all or set of standard fields and sublists from the employee record. For more information, see [Advanced Employee Permissions](#).

The following section contains information about the permission requirements you need when working with the various SuitePeople features.

NetSuite includes four different types of permissions; Lists, Reports, Setup, and Transactions. Generally, permissions have four possible access levels; View, Create, Edit, and Full.

You can control what a role can do based on the level of access you set for a permission. In general, each successive level (view, create, edit, full) of a permission provides increased usage of the related record type, task, or page, but the usage of some permissions does not fit exactly into this model. Generally, any user with at least View access to a record type has the ability to print records of that type. For some permissions, not all access levels are supported. All SuitePeople features require some level of employee access to view employee information. For more information, see the help topic [Permissions Documentation](#).

## Advanced and Basic Government-Issued ID Tracking Permission Requirements

If you have the Advanced and Basic Government-Issued ID Tracking features enabled in your NetSuite account, the Advanced Government-Issued IDs permission must be assigned to roles who need to track a variety of government-issued identifications for your employees.

In addition, if users need to add or edit government-issued IDs on the employee record, the Government-Issued ID Types permission should be assigned at access level Create or Edit.

These permissions are located on the Lists subtab of the Role page. For a list of the standard roles assigned to this permission, see the help topic [Standard Roles Permissions Table](#). You can create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

The following table lists the permission level a user must have to perform certain tasks related to the Advanced and Basic Government-Issued ID Tracking features.

Permission	Subtab	Permission Access Level	Supported Functionality
Advanced Government-Issued IDs	Permissions > Lists	View	Allows users to view and search for employee government-issued ID information. Users cannot create, edit, or delete government-issued ID information.
		Create	Allows users to create driver's license, passport and other IDs through entry forms. Users cannot edit or delete government-issued IDs.
		Edit	Allows users to create, view, and edit government-issued IDs. Users cannot delete government-issued IDs.
		Full	Allows users to create, view, edit, and delete government issued-IDs.
<div>  <b>Note:</b> IDs are always masked unless the Full access level is used. </div> Government-Issued ID Types	Permissions > Lists	View	Allows users to view and search for government-issued ID types. Users cannot create, edit, or delete government-issued ID types.
		Create	Allows users to create and view government-issued ID types for employees. Users cannot edit or delete government-issued ID types.
		Edit	Allows users to create, view, and edit government-issued ID types. Users cannot delete government-issued ID types.
		Full	Allows users to create, view, edit, and delete government-issued ID types.

For more information about these features, see [Government-Issued ID Tracking](#).

## Compensation Tracking Permission Requirements

If you have the Compensation Tracking feature enabled in your account, any standard roles that have the Employees permission can use this feature. This permission is located on the Lists subtab of the Role page. For a list of the standard roles assigned to this permission, see the help topic [Standard Roles Permissions Table](#). You can create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

The following table lists the permission level a user must have to perform certain tasks related to compensation tracking.

Permission	Subtab	Permission Access Level	Supported Functionality
Employees	Permissions > Lists	View	Allows users to view and search compensation tracking information on the employee record. Users cannot create or edit compensation tracking information on the employee record, and users cannot delete compensation tracking from the employee record.
		Create	Allows users to create and view compensation tracking information on the employee record. Users cannot edit or delete compensation tracking information from the employee record.

Permission	Subtab	Permission Access Level	Supported Functionality
		Edit	Allows users to create, view, and edit compensation tracking information on the employee record. Users cannot delete compensation tracking information from the employee record.
		Full	Allows users to create, view, and edit compensation tracking information on the employee record, and delete compensation tracking information from the employee record.

For more information about this feature, see [Tracking an Employee's Compensation](#).

## Effective Dating Permission Requirements

If you have the Effective Dating feature enabled in your account, the Employee Effective Dating permission must be assigned to roles to use the feature. In addition, if users need to add to or edit the change reasons record, the Employee Change Reason permission should be assigned at access level Create or Edit. These permissions are located on the Lists subtab of the Role page.

For a list of the standard roles assigned to these permissions, see the help topic [Standard Roles Permissions Table](#). You can create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

The following table lists the permission level a user must have to perform certain tasks related to effective dating.

Permission	Subtab	Permission Access Level	Supported Functionality
Employee Effective Dating Access levels Create and Full are not supported.	Permissions > Lists	View	Allows users to view and search for effective dated changes. Users cannot create, edit, or delete effective dated changes.
		Edit	Allows users to create, view, and edit effective dated changes. Users cannot create or delete effective dated changes.
Employee Change Reason Permission	Permissions > Lists	View	Allows users to view and search change reasons records. Users cannot create, edit, or delete change reason records.
		Create	Allows users to create and view change reasons records. Users cannot edit or delete change reason records.
		Edit	Allows users to create, view, and edit change reasons records. Users cannot delete change reasons records.
		Full	Allows users to create, view, edit, and delete change reasons records.

For more information about this feature, see [Effective Dating for Employee Information](#).

## Employee Center Publishing Permission Requirements

If you have the Employee Center Dashboard Publishing feature enabled, you must assign the Employee Center Publishing global permission to any users who are responsible for publishing a standard

Employee Center dashboard for your company. The permission is assigned to users on their employee record.

For more information about the Global Permissions feature, see the help topic [Using the Global Permissions Feature](#). For more information about the Employee Center Publishing feature, see [Employee Center Dashboard Publishing](#).

## Job Management and Job Requisitions Permission Requirements

If you have either the Job Management or the Job Requisitions feature enabled, the Job Management and Job Requisitions permissions must be assigned to roles to use these features. Additionally, if users need to assign jobs, the Employees permission should be assigned at access level Edit.

These permissions are located on the Lists subtab of the Role page. For a list of the standard roles assigned to these permissions, see the help topic [Standard Roles Permissions Table](#).

The following table lists the permission levels that a user must have to perform certain tasks related to these features.

Permission	Subtab	Permission Access Level	Supported Functionality
Employees	Permissions > Lists	Edit	Allows users to assign jobs on the employee record.
Job Management (Access level View is not supported)	Permissions > Lists	Create	Allow users to create and view job records. Users cannot edit or delete job records.
		Edit	Allows users to create, view, and edit job records. Users cannot delete job records.
		Full	Allows users to create, view, edit, and delete job records.
Job Requisitions (Access level View is not supported)	Permissions > Lists	Create	Allow users to create and view job requisition records. Users cannot edit or delete job requisition records.
		Edit	Allows users to create, view, and edit job requisition records. Users cannot delete job requisition records.
		Full	Allows users to create, view, edit, and delete job requisition records.

For more information about these features, see [Managing Jobs](#) and [Job Requisitions](#).

## Kudos Permission Requirements

If you have the Kudos feature enabled in your account, the Kudos permission must be assigned to roles to use this feature. Additionally, if users need to create or edit existing values, the Organizational Values permission should be assigned at access level Create or Edit.

These permissions are located on the Lists tab of the Role page. For a list of the standard roles assigned to this permission, see the help topic [Standard Roles Permissions Table](#).

The following table lists the permission level a user must have to perform certain tasks related to these features.

Permission	Subtab	Permission Access Level	Supported Functionality
Kudos	Permissions > Lists	View	Allow users to receive and view Kudos. Users cannot create new, edit, or delete Kudos.
		Create	Allows users to give Kudos. Users cannot edit or delete Kudos.
		Edit	Allows users to edit the Inactive field. Users cannot delete Kudos.
		Full	Allows users to edit the Inactive field and delete Kudos.
Organization Value	Permissions > Lists	View	Allow users to view company organizational values. Users cannot create, edit, or delete organizational values.
		Create	Allow users to create and view organizational values. Users cannot edit or delete organizational values.
		Edit	Allows users to create, view, and edit organizational values. Users cannot delete organizational values.
		Full	Allows users to create, view, edit, and delete organizational values.

For more information about this feature, see [Managing Kudos](#).

## News Items Permission Requirements

If the Employee Center Dashboard Publishing feature is enabled in your account, the News Items permission allows you to create news items that appear on the Company News portlet of the Employee Center.

This permission is located on the Lists tab of the Role page. For a list of the standard roles assigned this permission, see the help topic [Standard Roles Permissions Table](#).

The following table lists the permission access level a user must have to perform certain tasks related to this feature.

Permission	Subtab	Permission Access Level	Supported Functionality
News Items	Permissions > Lists	View	Allows users to view and search for news items. Users cannot create, edit, or delete news items.
		Create	Allows users to view and create news items. Users cannot edit or delete new items.
		Edit	Allows users to create, view, and edit news items. Users cannot delete news items.
		Full	Allows users to create, view, edit, and delete news items.

## Termination Reason Tracking Permission Requirements

If you have the Termination Reason Tracking feature enabled in your account, the Termination Reasons permission must be assigned to roles to use this feature.

This permission is located on the Lists tab of the Role page. For a list of the standard roles assigned to this permission, see the help topic [Standard Roles Permissions Table](#).

The following table lists the permission access level a user must have to perform certain tasks related to this feature.

Permission	Subtab	Permission Access Level	Supported Functionality
Termination Reasons	Permissions > Lists	View	Allows users to view and search for termination reasons. Users cannot create, edit, or delete termination reasons.
		Create	Allows users to view and create termination reasons. Users cannot edit or delete termination reasons.
		Edit	Allows users to create, view, and edit termination reasons. Users cannot delete termination reasons.
		Full	Allows users to create, view, edit, and delete termination reasons.

For more information about this feature, see [Termination Reason Tracking](#).

## Time-Off Management Permission Requirements

If you have the Time-Off Management feature enabled in your account, the Time-Off Administration permission must be assigned to roles to use this feature. This permission is located on the Lists subtab of the Role page. For a list of the standard roles assigned to this permission, see the help topic [Standard Roles Permissions Table](#).

You can also create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

The following table lists the permission level a user must have to perform certain tasks related to this feature.

**Note:** The Time-Off Tracking SuiteApp must be installed when you are using the Time-Off Management feature. The Time-Off Tracking SuiteApp enables users to request or approve time-off from the Employee Center..

Permission	Subtab	Permission Access Level	Supported Functionality
Time-Off Administration	Permissions > Lists	View	Allows users to view and search for time-off plans, time-off types, and time-off rules. Users cannot create, edit, or delete time-off information.
		Create	Allows users to create time-off plans, time-off types, and time-off rules. Users cannot edit or delete time-off information.
		Edit	Allows users to create, view, and edit time-off plans, time-off types, and time-off rules. Also, users can change the time-off plan assigned on the employee record. Users cannot delete time-off plans, time-off types, or time-off rules.

Permission	Subtab	Permission Access Level	Supported Functionality
		Full	Allows users to create, view, edit, and delete time-off plans, time-off types, and time-off rules.

For more information about this feature, see [Time-Off Management](#).

## Workforce Analytics Permission Requirements

If you have the Workforce Analytics feature enabled in your account, any standard roles that have the Workforce Analytics permission can use this feature. This permission is located on the Lists tab of the Role page. For a list of the standard roles assigned to this permission, see the help topic [Standard Roles Permissions Table](#). You can create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

The following table lists the permission level a user must have to perform certain tasks related to this feature.

Permission	Subtab	Permission Access Levels	Supported Functionality
Employees	Permissions > Lists	View	Allows users to view and search for headcount, hire, and turnover trends in your company. Users cannot create, edit or delete information.
		Create	Allows users to create hire and termination details on the employee record. Users cannot edit or delete hire or termination details on the employee record.
		Edit	Allows users to create, view, and edit hire and termination details on the employee record. Users cannot delete hire and termination details on the employee record.
		Full	Allows users to create, view, edit, and delete hire and termination details on the employee record.

For more information about this feature, see [Workforce Analytics](#).

## Adding an Employee

Employee records enable you to store and maintain information about each of your employees. This information includes contact details, payroll, human resources data, and access permissions.

From the employee record, you can grant an employee login access to your NetSuite account by entering an email address, password, and assigning a role. For example, you can give employees access to the Employee Center, where they can enter time, submit expense reports, and manage their events.

### To add an employee:

Go to Lists > Employees > Employees > New.

To modify the details of an existing employee record, go to Lists > Employees > Employees and then click **Edit** next to the name of the employee.

**Note:** If you have the Editing feature enabled, you can edit employee records from the Employees list. Click the information you want to change and make your changes. These changes are automatically saved on the record.

### Primary Information

1. If you use a custom form for employee records, select the name of the form from the **Custom Form** dropdown list.

To create a custom form for employee records, click Customize > Customize Form at the top of the page.

2. If you use templates to quickly enter data for employees, select the name of the template from the **Template** dropdown list.

To set up employee record templates, go to **Lists > Employees > Employees** and then click **New Template**. For more information, see [Creating an Employee Template](#).

3. In the **Employee ID** field, enter or verify the ID for this employee.
4. Enter a salutation for this employee.
5. Enter the employee's name.
6. Verify the employee's initials.  
The Initials field fills in automatically based on the name you entered in the **Name** field.
7. In the **Job Title** field, enter this employee's title.
8. In the **Supervisor** field, select the employee's supervisor.  
For more information, read [Assigning a Supervisor to an Employee](#) and [Updating an Employee's Supervisor](#).
9. Verify the selected currency for the employee.  
The currency defaults to the base currency of the associated subsidiary or company. This currency must be used for transactions with this employee.
10. Enter any comments in the **Notes** field.
11. In the **Image** field, select a picture for this employee.  
Select **New** to upload an image to your NetSuite file cabinet.

## Email | Phone | Address

1. Enter an email address for this employee.
2. Enter the employee's phone number.
3. Enter this employee's office, home, and mobile phone numbers.
4. Enter the employee's fax number.

You enter the employee's address on the Address subtab. For information, see [Entering Address Information for an Employee](#).

## Classification

1. (NetSuite OneWorld accounts) Select the subsidiary to associate with this employee.  
You cannot enter transactions for this employee unless a subsidiary is assigned.  
If you select this employee on time transactions, the transaction is associated with this subsidiary. The employee is able to access only information associated with this subsidiary.  
After a transaction has posted for the employee, you are not able to change the selected subsidiary on the employee record.  
You can grant an employee access to data for additional subsidiaries by customizing the **Subsidiaries** field for the employee's assigned role at **Setup > Users/Roles > Manage Roles**. See the help topic [Controlling Employee Access to Subsidiaries](#).
2. If you track departments, classes or locations, select the appropriate information for those fields.
3. If you use billing classes, select a billing class to associate with this employee.

Complete the fields on the record subtabs. The subtabs listed on this page may vary depending on the features enabled in your account.

Subtabs can include the following:

## Communication

This subtab lists all email messages sent or received by this employee's email address. If you have NetCRM or NetSuite and have the Mail Merge feature enabled, this subtab also lists letters, faxes, and PDF files sent by this person.

You can also attach messages received by this employee, send email to this employee, or send a letter, fax, or PDF to this employee through mail merge from this subtab.

For more information, see [Entering Communication Information on the Employee Record](#).

## Address

See [Entering Address Information for an Employee](#).

## Human Resources

See [Entering Employee Human Resources Information](#).

## Time-Off

See [Assigning a Time-Off Plan to an Employee](#).

## ACH/Direct Deposit

You can set up employees to be paid by direct deposit. For more information, see the help topic [Setting Up Employees for Direct Deposit](#).

 **Note:** You can use NetSuite to pay only those employees who reside in the United States.

## Time Tracking

On the **Time Tracking** subtab, in the **Time Approver** field, select the person who approves the employee's time transactions. If no time approver is selected, then the employee's supervisor approves time entries. If both a supervisor and a time approver are selected, then only the time approver can approve time entries using their Employee Center role.

This subtab lists all the time transactions entered by this employee. This subtab does not show if you do not track time.

## Compensation Tracking

See [Tracking an Employee's Compensation](#).

## Payroll

If you have enabled NetSuite Payroll, a **Payroll** subtab is added to your employee records. This subtab contains information that you must enter to use NetSuite to pay your employees.

For information, see the help topics [Updating Employee Records for Payroll](#) and [Setting Up NetSuite Payroll](#).

 **Note:** You can use NetSuite to pay only those employees who reside in the United States.

## Commission

Mark an employee as eligible for commission and select the method of paying commission.

## Marketing

**Subscriptions** – On this subtab, set the global subscription status for this employee and view any subscriptions.

**Campaigns** – This subtab lists all campaigns that have been sent to this employee's email address. The **Campaigns** subtab appears only if you use NetSuite or NetCRM and have the Marketing Automation feature enabled.

## Access

See [Giving an Employee Access to NetSuite](#) and [Assigning Roles to an Employee](#).

## System Information

This subtab shows the date this record was created. You can mark the record **Inactive** to prevent it from showing in lists.

This subtab lists system-generated entered notes about this employee or employee record. Because a contact record is created for each employee, these notes also appear on the corresponding contact record.

To prevent specific user roles from viewing notes on contact records that refer to the employee record, ensure that the role has **Self Only** or **Self and Subordinates Only** selected in the **Employee Restrictions** field at Setup > Users/Roles > Manage Roles.

## Jurisdictions

Review the information on the **Jurisdictions** subtab and resolve any conflicts. This subtab appears only if you use NetSuite to pay your employees.

For details on jurisdictions, read the help topic [Updating Employee Records for Payroll](#).

## Affordable Care Act (ACA)

This subtab appears only if you have the ACA SuiteApp installed. This subtab contains information that you must enter to setup and track the benefits coverage offered to full-time employees. For more information, see [Affordable Care Act \(ACA\) Reporting](#).

**Important:** After you have finished entering information on all areas of the record, click **Save**.

## Entering Communication Information on the Employee Record

On the **Communication** subtab of employee records, view and enter information on the following additional subtabs.

1. **Files** – This subtab lists files that you want to associate with this employee. To add another file, select the file from the file cabinet, and click **Attach**. Select **New** if the file you want to attach has not yet been uploaded to the file cabinet.
2. **User Notes** – This subtab lists manually entered notes about this employee or employee record. Because a contact record is created for each employee, these notes also appear on the corresponding contact record.  
  
To prevent specific user roles from viewing notes on contact records that refer to the employee record, ensure that the role has **Self Only** or **Self and Subordinates Only** selected in the **Employee Restrictions** field at Setup > Users/Roles > Manage Roles.
3. Click **Save**.

## Entering Address Information for an Employee

On the **Address** subtab of the employee record, you can enter multiple addresses for an employee. The address might be mandatory.

When using NetSuite Payroll, the home address you enter for an employee is used to calculate state and local taxes.

### To enter an address for an employee:

1. Go to Lists > Employees > Employees.
2. On the Employees list, click **Edit** next to the name of the employee for whom you want to enter an address.
3. On the Employee record, click the **Address** subtab.
4. Check the **Default Shipping** box to indicate that this address is the default shipping address for the employee.
5. Check the **Home** box to indicate that this address is the employee's home address.
6. In the **Label** field, enter a descriptive title to appear for this address in dropdown lists.  
For example, you could enter a label of **Home** or **Mailing Address**.
7. To add or edit values for other address fields, click the pencil icon in the **Edit** column.  
An address popup displays address fields.

**Note:** The following steps list the address fields included in the default address form. The address form shown for each employee may vary according to the country where the employee is located, and depends on the custom address forms defined in your account. For more information, see the help topic [Customizing Address Forms](#).

- a. Ensure the value for **Country** is correct. If it not, select a different country.

 **Note:** If you use NetSuite to pay your employees, you can pay only those employees who live and reside in the United States.

- b. In the **Attention** field, enter the person at this address who should be notified of receipt of documents or goods.

The value you enter autofills on forms if this address is marked as default for **Shipping** or **Billing**.

- c. In the **Addressee** field, enter the company name that should show on the shipping label here.

This name appears under the name entered in the **Attention** field.

- d. Enter a phone number for your employee.

This number appears on the Employee List report.

- e. Enter the employee's street address.

If you enter the zip code first, city and state populate automatically.

- f. By default, the information entered for the employee's address in the **Attention**, **Addressee**, **Address 1**, **Address 2**, **City**, **State**, **Zip**, and **Country** fields appears in read-only format in the **Address** free-form text box.

 **Note:** To edit the read-only text, check the **Override** box.

- g. Click **OK**.
- 8. To enter additional addresses, click **Add**.
- 9. Repeat steps 5-7 for each additional address.
- 10. Click **Save**.

## Entering Employee Human Resources Information

On the Human Resources subtab of the employee record, you can enter the employee's social security number, supervisor, hire date, and other information usually maintained in the employee's file in your HR department.

### To enter Human Resources information for an employee:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee's name.
3. Click the **Human Resources** subtab.
4. In the **Social Security** field, enter the employee's social security number. This number can be entered with or without hyphens.  
  
For information regarding social security number masking and encrypting, see [Working with Employee Social Security Numbers](#).
5. Enter this employee's birth date.

### Job Information

1. From the **Type** dropdown list, select the type category that applies to this employee.

The categories available in this dropdown list depend upon the employee types that have been created in your system for descriptive and reporting purposes. Employees' 'types' determine whether their data is included in employee-related key performance indicators.

You can create new **Types** by going to Setup > Accounting > Employee Related Lists > New.

2. Select the current status of this employee's employment with your company.  
You can create new selections for this field by going to Setup > Accounting > Employee Related Lists > New.
3. Enter a job description for this employee.
4. For sales reps, choose one of the following:
  - If you do not use the **Team Selling** feature, check the **Sales Rep** box to be able to assign sales territories to this employee or select this person in the **Sales Rep** field on customer records and sales transactions.
  - If you use the **Team Selling** feature, select a sales role in the **Sales Role** field if this employee is a part of sales teams. For more information, see the help topic [Team Selling](#).
  - When an employee has the **Sales Rep** box checked or a **Sales Role** selected on this subtab, NetSuite creates a customer record and that employee is selected as the default sales rep.
5. Check the **Support Rep** box if you want to be able to assign cases or case territories to this employee.
6. Check the **Project Resource** box to assign this employee to complete project tasks or manage projects.  
Project Resource employees appear in the **Name** dropdown list on the **Resource** subtab of project records, and also in the **Manager** dropdown list on the Create Projects from Sales Orders page. For more information, read the help topic [Using Project Management](#).
7. If this employee is a project resource, select a default project role in the **Default Projects Resource Role** field. When this employee is assigned to a project, the selected role is automatically assigned.
8. Select a work calendar for this employee.
9. In the **Labor Cost** field, enter the hourly overhead labor cost rate for this employee to calculate project costs and profitability.
10. In the **Hire Date** field, enter the date the employee was hired.
11. In the **Last Review Date** field, enter the date of the employee's last review.
12. In the **Next Review Date** field, enter the date of the employee's next review.
13. In the **Termination/Release Date** field, enter this person's last date of employment.

## Expense and Purchasing

1. In the **Expense Limit** field, enter the amount the employee can expense without supervisor or approver approval.  
This field defaults to \$0, which requires all expenses to be approved.
2. In the **Expense Approver** field, select the person that approves the employee's expense reports.  
If no approver is selected, the supervisor approves expense reports. If both a supervisor and an expense approver are selected, either can approve expense reports. For more information on approvers and approval limits, see the help topic [Approval Routing](#).
3. In the **Expense Approval Limit** field, enter the maximum amount an employee is allowed to approve on an expense report when specified as an approver for another employee.
4. In the **Purchase Limit** field, enter the amount the employee can purchase without supervisor or approver approval.

This field defaults to \$0, which requires all purchases to be approved.

5. In the **Purchase Approver** field, select the person that approves the employee's purchase requests.  
If no approver is selected, the supervisor approves purchase requests. If both a supervisor and a purchase approver are selected, either can approve the purchase request.
6. In the **Purchase Approval Limit** field, enter the maximum amount an employee is allowed to approve on a purchase request when specified as an approver for an employee.
7. In the **Account** field, enter this employee's account number if you, your payroll company or another company you deal with assigns account numbers to your employees.
8. Use the following information to enter or verify information on the additional subtabs on the **Human Resources** subtab.

After you have entered all necessary information, click **Save**.

## Job

For more information, see [Job Management](#).

## Subordinates

1. On the **Subordinates** subtab, if this employee is a supervisor, a list of this employee's direct subordinates are provided.
  - In the **View** field, select a custom list view to apply to the list shown on this subtab.
  - Click **Customize View** if you want to create a new list view for the list shown on this subtab.
  - Click **Edit** next to the name of a subordinate to edit the subordinate's employee record.

## Supervisor Change Hist.

1. This subtab shows system notes about changes to the employee's supervisor. For more information, see [Updating an Employee's Supervisor](#).

## Work Status

1. Select the Employee's resident status.  
This information is located in Section 1 of the employee's completed I-9 form.  
You can create new selections for this field by going to Setup > Accounting > Employee Related Lists > New.
2. Select the employee's **Visa Type**.  
You can create new selections for this field by going to Setup > Accounting > Employee Related Lists > New.
3. Enter the Visa's expiration date.
4. Enter the **Alien Number**.  
This information is located in Section 1 of the employee's completed I-9 form.  
This step is required only if the employee's work status is **Alien authorized to work**.
5. Enter the date through which the employee is authorized to work.  
This information is located in Section 1 of the employee's completed I-9 form.  
This step is required only if the employee's work status is **Alien authorized to work**.
6. On the **Work Status** subtab, check **I-9 Verified** if the employee has completed an I-9 form.

## Emergency Contacts

1. On the **Emergency Contacts** subtab, enter the name of the employee's emergency contact.
2. Enter the relationship the contact has with the employee.
3. Enter the address of the emergency contact.
4. Enter the phone number provided for the emergency contact.
5. Click **Add/Edit**.
6. Repeat these steps if the employee provided additional emergency contacts.

## Education

1. On the **Education** subtab, select the employee's level of education.  
You can create new selections for this field by going to Setup > Accounting > Employee Related Lists > New.
2. Enter the **Degree** received.
3. Enter the date the degree was conferred.
4. Click **Add/Edit**.
5. Repeat these steps for each level of education completed.

## Personal

1. Select the employee's marital status.  
You can create new selections for this field by going to Setup > Accounting > Employee Related Lists > New.
2. Select the employee's ethnicity.  
You can create new selections for this field by going to Setup > Accounting > Employee Related Lists > New.
3. On the **Personal** subtab, select the employee's gender.

# Giving an Employee Access to NetSuite

To give an employee access to your NetSuite account, you must ensure the employee record includes an email address, which serves as the user ID, and then set up access information on the Access subtab of the employee record. This setup includes the following:

- Enabling the Give Access option
- Providing a password for login to NetSuite
- Assigning roles and/or permissions

**Note:** If you have the Effective Dating feature enabled, the **Give Access** box and the **Email** address field on the employee record are not effective-dated. If you grant access to an employee or change the employee's email address, as part of an effective-dated change, those two changes are immediate.

You also can set up IP address restrictions to limit where employees can log in to NetSuite.

 **Note:** Only active users with access count against the Full User Count purchased for your account. Inactive users that have access do not count. For details about making users inactive, see [Inactivating Employee Records](#).

### To set up employee access to NetSuite:

1. Go to **Lists > Employees > Employees**.
  2. Click **Edit** next to the name of the employee for whom you want to set up access.
  3. Under **Email | Phone | Address**, enter the employee's email address.  
The email address is required for login.
  4. Click the **Access** subtab.
  5. Check the **Give Access** box.
  6. If you want to send an automatic email message notifying this employee of access privileges to NetSuite, check the **Send Notification Email** box.  
This email explains login procedures, however, it does not contain the employee's password. You must communicate this information to the employee.
  7. In the **Password** field, enter a password for the employee to use to log in.  
You must tell the employee the password you created because passwords are not provided in email notifications. For employees who can view unencrypted credit card numbers, the password must be at least 10 characters or the minimum length required for your account, whichever is greater. This is required to comply with Payment Card Industry (PCI) Data Security Standard.  
Follow the guidelines provided in the Password Strength field. For more information, see the help topic [NetSuite Password Requirements](#).
  8. In the **Confirm Password** field, re-enter the password.
  9. Check the **Require Password Change on Next Login** box to require this employee to change their password on their next login to NetSuite.  
When the employee next logs in, the **Change Password** page appears and the user cannot access other NetSuite pages until a new password is created and saved.  
Requiring this action protects your account from unauthorized access using generic passwords and prepares your account for an audit.
-  **Important:** The **Require Password Change on Next Login** box never appears as checked. When you check this box and save the record, an internal flag is set. When the password change occurs, the flag is cleared. If you later check the box again and resave the record, the internal flag is reset to require another password change.
10. Check the **Inherit IP Rules from Company** box to provide this employee NetSuite login access at the IP addresses listed at **Setup > Company > Company Information**.  
If you check this box, this employee has access to NetSuite at every company computer with access unless you specify an IP address(es) in the **IP Address Restriction** field.  
If you do not check this box, you must specify one or more IP addresses in the **IP Address Restriction** field or this employee will not be able to log in to NetSuite.  
For information about setting IP address rules, see the help topic [Enabling and Creating IP Address Rules](#).
  11. If needed, in the **IP Address Restriction** field, specify one or more IP addresses that this employee can use to log in to NetSuite.

**Note:** IP address rules may prevent users from accessing Web queries of NetSuite data. For example, this issue occurs when a user with an IP address rule creates a Web query and sends it to other users who are logging in from different IP addresses.

12. Check the **Concurrent Web Services User** box to permit this employee to have standard UI login access plus up to ten concurrent Web services sessions.
13. On the **Roles** subtab, assign one or more roles to this employee.  
Each role includes a set of associated permissions that determine the data assigned users can see and the tasks they can perform. For more information, see [Assigning Roles to an Employee](#).
14. If the **Global Permissions** feature has been enabled on the **Employees** subtab at Setup > Company > Enable Features, a **Global Permissions** subtab is available where you can assign permissions directly on the employee record.  
These permissions apply for all of the employee's assigned roles. For more information, see the help topic [Using the Global Permissions Feature](#).

## Assigning Roles to an Employee

You must assign one or more roles to each employee to whom you want to provide access to NetSuite. Each role is a set of associated permissions that determine the data assigned users can see and the tasks they can perform.

You assign roles to an employee on the Roles subtab of the Employee record's Access subtab.

**Note:** If you have the Effective Dating feature enabled, the Role field is not effective-dated. If you change an employee's role settings, as part of an effective-dated change, this change is immediate.

- For general information about roles and NetSuite access, see the help topic [NetSuite Access Overview](#).
- NetSuite provides many standard roles with predefined permissions. To view a list of the standard roles and permissions, click [Standard Roles Permissions Table](#).
- You can customize the standard roles to fit the unique needs of your business. To learn how to customize a role, see the help topic [Customizing or Creating NetSuite Roles](#).
- If the Global Permissions feature is enabled, in addition to assigning roles to employees, you can assign permissions directly on each employee record. For more information, see the help topic [Using the Global Permissions Feature](#).
- You can restrict employee access to data by location. For information, see [Associating an Employee with a Location](#).
- For information regarding employee roles and social security data, read [Working with Employee Social Security Numbers](#).

Employees can have multiple roles in your company.

### To assign one or more roles to an employee:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the name of the employee you want to assign a role to.
3. Under **Email | Phone | Address**, enter an email address in the **Email** field if one has not been entered already.

4. Click the **Access** subtab.
5. Complete all access-related fields, if you have not already.  
For details, see [Giving an Employee Access to NetSuite](#).
6. In the **Role** field, select a role for this employee.
7. Click **Add**.
8. Repeat steps 6-7 for any other roles you want to assign to this employee.
9. Click **Save**.

Your employee now has a role and can access your NetSuite account. When the employee logs in, the employee sees only the links that the role gives permission to see.

If you need to remove a role for an employee, open the record, click the name of the role on the **Access** subtab. Click **Remove**, and then click **Save**.

## Assigning a Supervisor to an Employee

In NetSuite, supervisors can approve the following for their supervised employees:

- Expense reports, if no expense approver is assigned
- Purchase orders, if no purchase approver is assigned
- Time-off requests, if the Time-Off Management feature is enabled

For someone to be considered a supervisor in NetSuite, that person must be selected as the supervisor of another employee on that employee's record. The supervisor then receives an email when one of his employees enters a new time-off request, a new expense report, or a new purchase request that needs approval. For more information, see [Approving or Rejecting Time-Off Requests](#) and [Approval Routing](#).

### To assign supervisors on employee records:

1. Create employee records for your supervisors at Lists > Employees > Employees > New.  
After you have added employee records for all of your supervisors, select the supervisors' names on the other employee records you need to add.
2. If you have already set up employee records and want to assign supervisors, go to Lists > Employees > Employees. Click **Edit** next to the name of the person to whom you want to assign a supervisor.
3. Under Primary Information, in the **Supervisor** field, select the employee that supervises the employee whose record you are creating.
4. When you have finished editing the employee's record, click **Save**.

## Updating an Employee's Supervisor

When a supervisory change is being made, an employee may transfer from one supervisor to another earlier or later than the date on which that employee's record is updated. To accurately maintain records, employee records must be able to reflect an effective date for supervisory changes. For example, to calculate commissions correctly after a supervisory change, the effective date of the change can be edited to a future or past date, providing more accurate commission calculations for manager schedules.

Jack, a sales rep, began reporting to his new supervisor, Mary, on April 1st. The Human Resources department is not notified of the change until April 15th, and the employee record is updated on that date. Unless the effective date of the supervisory change is modified, Mary's commissions related to Jack for the first part of April are understated and are incorrectly credited to Jack's former supervisor, Jim. Jack's employee record can be updated to reflect the correct effective date of April 1st, even after that date as passed. After a commission recalculation is performed, the commission based on the activity from April 1 to April 15 is credited to Mary.

**Note:** A change to a supervisor effective date does not cause a commission recalculation, which may be necessary to correct the commission amount.

Supervisor changes are entered on the Human Resources subtab of employee records.

Existing expense or time approvals already queued remain in the same supervisor's queue, despite effective date changes. New approvals, however, are routed to the new manager.

**Note:** You cannot enter effective dates of assignments that overlap. For example, an employee cannot report to two supervisors at the same time.

### To update a supervisor assignment:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee.
3. Under Primary Information, in the **Supervisor** field, select the supervisor's name.
4. Click **Save**.

After a new supervisor is selected and the record is saved, the change is recorded on the **Human Resources** subtab under the **Supervisor Change Hist.** subtab, in addition to the system date on which the field was changed.

On the **Supervisor Change Hist.** subtab, click **Edit** on a change line to do the following:

- Modify the effective date when an employee reports to a supervisor to a later or earlier date
- Modify the supervisor assignment

In the **Valid Range** field, limitations to changes are governed by the reporting relationships of an employee's superior and subordinates.

For example, employees may have the following hierarchy:

- President
- Vice President

effective reporting date: 5/1/13

cannot change date after 10/1/13

- Manager

effective reporting date: 10/1/13

cannot change date before 5/1 or after 2/1

- Sales Rep

effective reporting date: 2/1/14

cannot change date to before 10/1

The manager, who reported to the Vice President on 10/1/13, could have an effective date change between 5/1/13 or 2/1/14.

You have more flexibility, however, if you change the dates of the superior or subordinates. For example, if you change the reporting date of the manager to the Vice President from 10/1 to 5/1, the Rep's Valid Range for date changes becomes from 5/1 through any date.

## Viewing and Editing an Employee Record with Effective Dating

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Effective Dating feature enables you to make changes to the employee record that are back-dated or future-dated to a specific date. These changes represent when a particular piece of information became effective or true, regardless of when you made the change. To use the effective dating feature, you must be logged into NetSuite as an Administrator, a Chief People Office (CPO), or an HR Generalist.

Many fields on the employee record are supported by effective dating, but others are not. When you view an employee record, fields that are not supported are labeled Not Effective-Dated. For more information, see [Effective Dating for Employee Information](#).

### Viewing an Employee's Record as of a Date

If you are using the Effective Dating feature, you can view many of the fields on an employee's record as of a specified date.

#### To view an employee record as of a date:

1. Go to List > Employees > Employees.
2. Click **View** next to the name of the appropriate employee.
3. On the employee record page, under **Actions**, click **View As Of Date**.
4. In the Select Effective Date Information window, enter or select a date and click **OK**.

The employee record page is refreshed showing the Viewing As Of banner to indicate that you are viewing an effective-dated view of the employee record. Note that the fields that are not effective-dated are labeled.

### Editing an Employee's Record as of a Date

If you are using the Effective Dating feature, you can edit many of the fields on an employee's record as of a specified date. This allows you to back-date a change to employee information and specify when a particular piece of information was valid or true.

#### To edit an employee record as of a date:

1. Go to List > Employees > Employees.

2. Click **Edit** next to the name of the appropriate employee. You can also click **Edit** from a view of an employee record.
3. In the Select Effective Date Information window, enter or select the date as of which you would like to edit the employee record.
4. Select a change reason from the **Change Reason** dropdown list. Optionally, enter details of the change to further describe it. Click **OK**.  
The employee record page appears showing the Editing As Of banner to indicate that you are editing an effective-dated view of the employee record. Note that the fields that are not effective-dated are labeled.
5. Make the required changes to the employee record.
6. Click **Save**.

## Searching for Effective-Dated Changes to the Employee Record

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

After you have used the Effective Dating feature to make back- or future-dated changes to employee information, you can use the NetSuite search features to determine when particular aspects of the employee record were true or valid. You use the Valid Date option on the Employee Change Search page to do this.

### To search for effective-dated changes to the employee record:

1. Go to Reports > New Search.
2. Click **Employee Change**.
3. On the Employee Change Search page, under **Valid Date**, specify the date or date range that you want to search.
4. Specify any other search parameters you want to include. For example, you can look for employees who have effective-dated changes with a particular change reason by selecting one or more reason from the **Change Reason** list.
5. Click **Submit**.

The Employee Change Search: Results page shows the results of your search.

## Tracking an Employee's Compensation

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Compensation Tracking feature enables you to track basic wage and salary information for employees directly from the employee record. When this feature is enabled, the Compensation Tracking tab is added to each employee record.

Compensation tracking is available to any standard roles that have the Employees permission. For more information, see [Compensation Tracking Permission Requirements](#). You can create custom roles

that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

If the NetSuite Payroll feature is also enabled in your implementation of NetSuite, the wage and salary information that you enter in the Compensation Tracking tab can be copied to Payroll, so that you only need to update wage and salary information in one place. For more information, see the help topics [Setting Up the Integration of Payroll and Compensation Tracking](#) and [Setting Up Earnings for an Employee](#).

 View the Introduction to Compensation Tracking video.

### To track an employee's compensation:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee you want to setup compensation tracking for.
3. Click the **Compensation Tracking** subtab.
4. From the **Compensation Currency** list, select the currency to use.

 **Note:** If you set up Compensation Tracking to work with NetSuite Payroll, and if the employee is included in payroll, the currency is automatically set to U. S. Dollars (USD) and cannot be edited.

5. From the **Base Wage Type** list, select the base wage type. Selections include annual salary, hourly, and monthly salary.

 **Note:** If you set up Compensation Tracking to work with NetSuite Payroll, and if the employee is included in payroll, the value in the **Base Wage Type** list is automatically copied to the **Compensation Type** field on the Payroll tab. This value cannot be edited.

6. In the **Base Wage** field, enter the employee's base wage.
7. Click **Save**.

## Kudos

 **Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Kudos feature enables your employees to give social-based recognition to each other for accomplishments, achievements, and milestones. When they give Kudos to a coworker, they include a short message explaining the recognition and optionally indicate any of the organizational values at your company that the employee's actions support. These Kudos then appear in a newsfeed portlet on the Employee Center, where other employees can indicate support. Kudos can be filtered by department and location.

When you first enable the Kudos feature, NetSuite provides you with a list of sample organizational values. You can use these as they are, delete or edit ones that you want to repurpose, or create new ones that match your organizational culture.

For more information about Kudos, see the following topics:

- [Managing Kudos](#)
- [Working with Kudos in Employee Center](#)

## Managing Kudos

The Kudos feature enables your employees to give social-based recognition to each other for accomplishments, achievements, and milestones. When they give Kudos to a coworker, they include a short message explaining the recognition and optionally indicate any of the organizational values at your company that the employee's actions support. These Kudos then appear in a newsfeed portlet on the Employee Center, where other employees can indicate support. Kudos can be filtered by department and location.

When you first enable the Kudos feature, NetSuite provides you with a list of sample organizational values. You can use these as they are, delete or edit ones that you want to repurpose, or create new ones that match your organizational culture.

## Roles and Permissions

For details about the permission requirements for Kudos, see [Kudos Permission Requirements](#).

## Managing Organizational Values

When you first enable the Kudos feature, NetSuite provides you with a list of sample organizational values. You can use these as they are, delete or edit ones that you want to repurpose, or create new ones that match your organizational culture.

### To manage organizational values:

1. Go to Setup > Performance Management > Organization Values. The Organization Values list page shows the values that employees can assign to Kudos.
2. To add a new organization value, click **New Organization Value**.
3. Enter a unique name for the value in the **Name** field.
4. Optionally, enter a description of what the value means in the **Description** field.
5. Optionally, select an image to show with the value from **Image** dropdown list.
6. Click **Save**.

## Giving Kudos to Employees

Most employees within your organization will give Kudos to their coworkers using the Kudos portlet in their Employee Center role. However, if you are an Administrator, an HR Generalist, or a Chief People Officer, you can give Kudos and view, edit, and delete Kudos that have been given from a list page.

### To give Kudos to an employee through list page:

1. Go to Setup > Performance Management > Kudos. The Kudos list page shows all Kudos that have been given in your organization.
2. Click **Give Kudos**.
3. To add a new Kudos, click **New Kudos**.
4. On the Kudos page, begin typing an employee's name in the **Recipients** field. As you type, suggested names appear that match what you have typed.
5. If you want to give Kudos to more than one employee at once, then keep adding names.

6. In the **Description** field, type a description for the Kudos that explains why you want to recognize your coworker(s).
7. In **Organization Values** list, click one or more organizational values that this Kudos demonstrates.
8. Click **Save**.

## Implications of Deleting Employees

When an employee leaves your company, you would usually inactivate or terminate them, but not delete their employee record entirely. If you decide to delete an employee record from your NetSuite account, this has the following effects on Kudos:

- If the employee was the only recipient of any Kudos, those Kudos are deleted from the system.
- If the employee was one of several recipients of Kudos, their name is removed from the Kudos, but the Kudos is not deleted.
- If the employee gave Kudos to coworkers, you cannot delete their employee record until you delete all of those Kudos.

## Giving Kudos to Coworkers using Employee Center

You use Kudos to recognize your coworkers for a job well done. You could give Kudos to someone for making an outstanding contribution, providing a great idea, or giving you help on a project. You can give Kudos to more than one coworker. You describe why you are giving them Kudos, and then choose some organizational values that your coworker demonstrated. To give Kudos, you must be using your Employee Center role.

### To give Kudos to coworkers:

1. From the Employee Center, in the Kudos portlet, click in the **Give Kudos to...** box. If your Kudos portlet is in the narrow configuration, click **Give Kudos**.
2. Begin typing a coworker's name. As you type, suggested names appear that match what you have typed.
3. If you want to give Kudos to more than one coworker at once, then keep adding names.
4. In the text field, type a description for the Kudos that explains why you want to recognize your coworker(s).
5. Under Supported Values, click one or more organizational values that this Kudos demonstrates. When you hover over a values icon, a description of that value appears.
6. Click **Give Kudos**.

Your kudos appears in the Kudos portlet.

## Working with Kudos in Employee Center

The Kudos portlet shows a newsfeed-style display of the Kudos that have been given in your company. Here are some ways you can interact with the Kudos feed:

- To show support for a Kudos that someone else has given, click the Support button beside the Kudos. The button shows how many people have shown their support for the Kudos.

- By default, the Kudos portlet shows Kudos given across your entire company. To filter the Kudos to just one department, click the **My Company** dropdown list and select a department.
- To search for a person's name or a word or phrase in Kudos descriptions, enter a term in the search field and click the **Search** button.

## Associating an Employee with a Location

You can associate employees with a specific location to ensure that employees have access to only the information associated with that location. For example, you can restrict access for warehouse personnel who handle item receipts or fulfillments at a single location. You can also refine employee reports and searches by location.

### To associate an employee with a location:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee to whom you want to assign a location.
3. Under Classification in the **Location** field, select the location of this employee.  
For more information, read the help topic [Creating Locations](#).
4. Click **Save**.

To search for employee records based on location, go to Lists > Employees > Employees > Search. In the **Location** field, choose the company location whose employee records you want to access, and click **Submit**. A list of employee records for that location appears.

### To restrict employee access by location:

1. Go to Setup > Users/Roles > User Management > Manage Roles.
2. Click **Customize** next to the role you would like to restrict.
3. Click the **Restrictions** subtab.
4. Click the blank line in the list and select **Location** from the **Segment** column.
5. From the **Restrictions** column, choose a level of access for the location field on transactions and records.
6. In the **Location Restrictions** field, choose a level of access for the location field on transactions and records.
  - **None - default to own** - There is no restriction on what can be selected and the default selection is the location set on the user's record.  
All transactions and records are accessible.
  - **Own, subordinate, and unassigned** - Users can select their own location, sublocations of their location, locations and sublocations of their subordinates, or leave the **Location** field blank.  
Users can access only those transactions and records with one of these selections in the location field.
  - **Own and subordinates only** - Users can select only their location and sublocations of their location, or locations and sublocations of their subordinates in the **Location** field.  
Users can access only those transactions and records with their location or sublocations selected in the **Location** field.
7. Check the **Allow Viewing** box to allow users logged in with this role to see, but not edit, data for employees to which the role does not have access.

**Important:** This setting does not allow viewing of employee payroll or commissions data. Also, users cannot view non-subordinate employee records other than their own record when the **Restrictions** column is set to **own and subordinates only**.

8. Check the **Apply to Items** box to apply the department restrictions defined here to item records, in addition to transaction, employee, or partner records.
9. Click **Save**.

## Creating an Employee Template

You can create a template for employee records to speed up the process of adding employees to NetSuite.

On the template record, you select default values for fields on the employee record. When creating an employee record, you select your template, and the default values automatically fill in the employee record. For example, you can create a template for customer support reps that are paid hourly. On the template, you select your support department and class, the location of this support team, payroll earnings, withholdings, and deductions, and designate the employee as a support rep.

When you go to Lists > Employees > Employees > New to add a support rep employee, you can select your template to fill in all the appropriate information. All you must do is enter the employee's name and contact information and set up access to NetSuite, if necessary.

### To create an employee template:

1. Go to Lists > Employees > Employees.
2. In the Employees list, click **New Template**.
3. In the **Employee ID Template** field, enter a name for this template.  
You will select this name in the **Template** field when creating new employee records.
4. Under Classifications, you can:
  - Select a default department, class, and location for employees. Click the plus sign next to any of these fields to create a new department, class, or location.
  - If you use NetSuite OneWorld, you can select a default subsidiary for employees.
  - If the **Project Management** feature has been enabled, you can select a default billing class for employees. An employee's billing class sets the rate billed for that employee's time.
5. On the **Human Resources** subtab, you can define defaults for the following:
  - **Type** - Select an employee type from those defined at Setup > Accounting > Employee Related Lists.
  - **Sales Role** - If this template is for sales reps, select a sales role from those defined at Setup > Sales > CRM Lists. If you select from this field, sales territories can be assigned to employees whose records are entered with this template. These employees can be selected in the **Sales Rep** field on customer records.
  - **Support Rep** - If this template is for support reps, check this box. If you check this box, case territories can be assigned to employees whose records are entered with this template. These employees can be selected in the **Assigned To** field on case records.
6. On the **Payroll** subtab, you can define defaults for the following:
  - **Include in Payroll** - whether or not employees created with this template are included in NetSuite Payroll

- **Compensation Type** - Wage or Salary
  - **Pay Frequency** - how often employees created with this template are paid
  - **Workplace** - select an existing workplace or click the plus sign to create a new one
  - Payroll items to be used for taxes, earnings, deductions, contributions, accrued time, and any or all combinations
    - For steps on setting up deductions, see the help topic [Setting Up Deductions for an Employee](#).
    - For steps on setting up company contributions, see the help topic [Setting Up Company Contributions for an Employee](#).
    - For steps on setting up accrued time such as vacation and sick time, see the help topic [Setting Up Accrued Time for an Employee](#).
    - You can create new payroll items of any of these types at Lists > Employees > Payroll Items > New.
7. Click **Save** to make your template available on employee records.

## Working with Employee Social Security Numbers

Social security numbers are masked and encrypted by default when displayed on the screen or when records or transactions are printed. Only administrators or users with permission to access social security number data can view the numbers unmasked.

Users permission to access social security number data is based on the level of the Employee Social Security Numbers permission that is associated with their assigned roles. This permission can be at one of the following two levels:

- **Masked** – Social security numbers appear in masked form such as (\*\*\*\*\* or \*\*\*\*\*). If 11 characters are displayed, it indicates that hyphens were used when the social security number was entered.
- **Full** – The complete social security numbers is displayed such as (123-11-1234).

Users assigned standard roles can access social security number data as follows:

Role	Permission Level
Administrator	Full
Employee Center	Masked
Full Access	Full
Payroll Manager	Full
Payroll Setup	Full
System Administrator	Full

Social security number data is masked or displayed based on role access level when a user does any of the following:

- Views the employee list
- Views or edits HTML or PDF formats of forms
- Views reports
- Customizes reports

- Saves or views saved reports

## Printing Mailing Labels for Employees

You can print mailing or shipping labels for employees without using mail merge or data export. For more information on printing mailing labels, see the help topic [Printing Mailing and Shipping Labels](#).

To print mailing or shipping labels, go to Transactions > Management > Print Checks and Forms. Click the Mailing Labels link.

# Effective Dating for Employee Information

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Effective Dating feature enables you to make changes to the employee record that are back-dated or future-dated to a specific date. These changes represent when a particular piece of information became effective or true, regardless of when you made the change. To use the effective dating feature, you must be logged into NetSuite as an Administrator, a Chief People Office (CPO), or an HR Generalist.

When you make an effective-dated change, you specify a change reason to document why the change was made. This enables you to track and distinguish changes by reason. When you enable the Effective Dating feature, several default change reasons become available, but you can create new ones that match your company's policies.

For more information about this feature, see these topics:

- [Using Effective Dating with the Employee Record](#)
- [Managing Employee Change Reasons](#)
- [Searching for Effective-Dated Changes to the Employee Record](#)
- [Using Effective Dating with Other NetSuite Features](#)
- [Using Effective Dating with Employee Workflows and SuiteScripts](#)

## Using Effective Dating with the Employee Record

The SuitePeople Effective Dating feature enables you to make changes to the employee record that are effective as of a past, current, or future date. These changes represent when a particular piece of information became effective or true, regardless of when you made the change. To use the effective dating feature, you must be logged into NetSuite as an Administrator, a Chief People Office (CPO), or an HR Generalist.

Many fields on the employee record are supported by effective dating, but others are not. When you view an employee record, fields that are not supported are labeled Not Effective-Dated.

Before using Effective Dating feature, you must enable it.

**Note:** If you decide to disable this feature after using it to make effective-dated changes to employee records, any back-dated or future-dated changes you make will be lost and only the current state of the employee records will be kept.

## Roles and Permissions

For details about the permission requirements for effective dating, see [Effective Dating Permission Requirements](#).

## Viewing an Employee's Record as of a Date

If you are using the Effective Dating feature, you can view many of the fields on an employee's record as of a specified date.

### To view an employee record as of a date:

1. Go to Lists > Employees > Employees.
2. Click **View** next to the name of the appropriate employee.
3. On the employee record page, under **Actions**, click **View As Of Date**.
4. In the Select Effective Date Information window, enter or select a date and click **OK**.  
The employee record page is refreshed showing the Viewing As Of banner to indicate that you are viewing an effective-dated view of the employee record. Note that the fields that are not effective-dated are labeled.

## Editing an Employee's Record as of a Date

If you are using the Effective Dating feature, you can edit many of the fields on an employee's record as of a specified date. This allows you to back-date a change to employee information and specify when a particular piece of information was valid or true.

### To edit an employee record as of a date:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the name of the appropriate employee. You can also click **Edit** from a view of an employee record.
3. In the Select Effective Date Information window, enter or select the date as of which you would like to edit the employee record.
4. Select a change reason from the **Change Reason** dropdown list. Optionally, enter details of the change to further describe it. Click **OK**.  
The employee record page appears showing the Editing As Of banner to indicate that you are editing an effective-dated view of the employee record. Note that the fields that are not effective-dated are labeled.
5. Make the required changes to the employee record.
6. Click **Save**.
7. If there are any conflicts between the changes you want to make and previously made effective-dated changes, they appear in the **Field Conflicts Found** window. To resolve the conflicts, do the following:
  1. To keep a previously created change, click **Keep** beside the change.
  2. To reject a previously create change, click **Override** beside the change.
  3. When you are finished resolving the conflicts, click **Confirm**.

## Searching for Effective-Dated Changes to the Employee Record

After you have used effective dating to make back-dated changes to employee information, you can use the NetSuite search features to determine when particular aspects of the employee record were true or valid. You use the Valid Date option on the Employee Search page to do this.

### To search for effective-dated changes to the employee record:

1. Go to Lists > Employees > Employees.
2. Click **Search**.

3. On the Employee Search page, in the **Valid Date** dropdown list, select **on** and then specify a date.
4. Click **Submit**.

The Employee Search: Results page shows the results of your search.

## Managing Employee Change Reasons

If you have the Effective Dating feature enabled, you must specify an employee change reason when you make an effective-dated change to an employee record. Several default change reasons are provided when the feature is enabled. You can edit or delete these, and create your own.

 **Note:** You cannot delete an employee change reason that has been used to make an effective-dated change. If you no longer want to use a particular employee change reason, you can make it inactive. This causes it to not be available when an effective-dated change is made.

### To create an employee change reason:

1. Go to Setup > HR Information System > Employee Change Reasons.
2. Click **New Employee Change Reason**.
3. On the Employee Change Reason page, enter a **Name** and **Description** for the reason.
4. Click **Save**.

### To edit or inactivate an employee change reason:

1. Go to Setup > HR Information System > Employee Change Reasons.
2. Click **Edit** next to the change reason you want to edit.
3. On the Employee Change Reason page, enter a **Name** and **Description** for the reason.
4. To inactivate the change reason so that it is no longer available to select when editing an employee record, check the **Inactive** box.
5. Click **Save**.

## Using Effective Dating with Other NetSuite Features

When the Effective Dating feature is enabled, some limits to NetSuite functionality exist.

### Overriding Future Changes

Any effective-dated change, whether past, present, or future, overrides any future-dated changes relative to the change being made.

## Impact of Effective Dating on Employee Workflows and SuiteScripts

With the Effective Dating feature enabled:

- When you make a change to the current version of an employee record, NetSuite executes all workflows and scripts that are triggered by employee record changes.

- When you make a past-dated change to an employee record, NetSuite does not execute workflows and scripts that normally are triggered by employee record changes.
- When you make a future-dated change, the system does not immediately execute workflows and scripts that normally are triggered by employee record changes. These workflows and scripts are run when the date specified in the future-dated change arrives.
- Any change that you make to the employee record will conflict with any future-dated changes that are dated after the change you making now. If you make this change in the user interface, the system displays a window showing the conflicts and prompting you to confirm them. With workflows and scripts, the future-dated change is automatically overridden. For example, if you change an employee's department from Sales to Marketing as of January 1, 2019, then change that employee's department from Sales to HR as of today, the future-dated change from Sales to Marketing is overridden.
- Every effective-dated change requires a change reason. If a workflow or script does not provide a change reason, a default change reason is provided so that the workflow or script will not fail. For information about providing a change reason while scripting, see [Using Effective Dating with Employee Workflows and SuiteScripts](#). Here is a list of the default change reasons provided:
  - CSV Import Change — This employee's information has been changed using CSV import.
  - New Employee Record — This employee is new to the SuitePeople system.
  - Web Service Change — This employee's information has been changed using web services.
  - SuiteScript Change — This employee's information has been changed using SuiteScript.

## Giving Employees Access and Assigning Roles

When you give an employee access to NetSuite, you check the Give Access box on the Access tab of their employee record, assign a role to the employee, and make sure that the employee's email address is accurate so that NetSuite can contact them. These fields are not effective-dated. If you change any of these settings, the change takes effect immediately, even if you do so as part of an effective-dated change. For more information, see [Giving an Employee Access to NetSuite](#) and [Assigning Roles to an Employee](#).

## Updating an Employee's Supervisor

When you change an employee's supervisor on their employee record, you can then go to the Human Resources > Supervisor Change Hist. subtab and change the effective date for this change. This is not governed by the Effective Dating feature.

## Payroll Effective Dates

If you are using NetSuite Payroll, note that the Payroll tab on the employee record has several fields that have an Effective Date and an Expiration Date. These values are not governed by the SuitePeople Effective Dating feature. These fields include: Earnings, Deductions, Company Contributions, and Accrued Time.

## Advanced Permissions Feature

The Advanced Permissions feature enables you to restrict a user's allowable actions by such characteristics as department, class, location, or subsidiary. For more information, see [How Advanced Employee Permissions Interacts with Effective Dating](#).

## Using Effective Dating with Employee Workflows and SuiteScripts

If the Effective Dating feature is enabled, you can make past, future, or current-day changes to the employee record using the user interface and using workflows and SuiteScripts. When you make an effective-dated change to the employee record, you specify a change reason. When you make past or future effective-dated changes, you also specify the effective date for the change.

### Current Day Changes

Here is a sample of how you make changes to today's version of the employee record:

```
var rec = nlapiLoadRecord('employee', '659')
rec.setFieldValue('initials', 'CC');
rec.setFieldValue('employeechangereason', '4')
nlapiSubmitRecord(rec, true)
```

### Future or Past Effective-Dated Changes

Here is a sample of how you make changes to the employee record on a future or past date:

```
var rec = nlapiLoadRecord('employee', '659', {'effectivedate':'2017-10-31'})
rec.setFieldValue('phone', '(111)-111-1111');
rec.setFieldValue('employeechangereason', '4')
nlapiSubmitRecord(rec, true)
```

Note that the effective date must be specified in YYYY-MM-DD format.

# Employee Directory and Org Browser

The Employee Directory SuiteApp enables your employees to quickly and easily search for their colleagues by name, location, department, and job title. If you use NetSuite OneWorld, employees can also search by subsidiary. This SuiteApp also provides an Org Browser that your employees can use to quickly browse through the organizational chart for your company, viewing the supervisors and direct reports of fellow employees.

If you have the Kudos feature enabled, your employees can give Kudos to colleagues directly from the employee directory. For more information on the Kudos feature, see [Kudos](#).

For more information on this SuiteApp, see the following topics:

- [Setting Up the Employee Directory SuiteApp](#)
- [Using the Employee Directory](#)
- [Using the Org Browser](#)

## Setting Up the Employee Directory SuiteApp

### Prerequisites for the Employee Directory SuiteApp

To install the Employee Directory SuiteApp, you must have Employee Center provisioned for your account. Before installing this SuiteApp, make sure that the following features are enabled in your NetSuite account (if you do not see all of these features on the Enable Features page, contact your NetSuite account manager):

- Custom Records
- Server SuiteScript

### Installing the Employee Directory SuiteApp

Install the Employee Directory SuiteApp:

Bundle Name: **Employee Directory**

Bundle ID: 112469

This is a managed bundle and is automatically updated whenever there are updates. These issue fixes and enhancements are available after the SuiteApp is updated in your account.

For more information about installing SuiteApps, see [Installing a Bundle](#) in the NetSuite Help Center.

### Configuring the Employee Directory and Org Browser

After installing the Employee Directory SuiteApp, you can configure the following aspects of the Employee Directory and Org Browser:

- Choose whether to use either the Employee Directory, the Org Browser, or both.
- Choose two fields that will be shown on the Employee Directory for all employees.

- Apply a filter to include or exclude employees based upon a NetSuite saved search.
- Specify a list of employees who are considered top-level employees in the Org Browser so that their manager does not appear above them in the hierarchy.

The Employee Directory SuiteApp includes a default saved search which filters out inactive and terminated users. You can create a saved search to filter employees in a different way by creating a new saved search and selecting it on the Employee Directory Configuration page.

For more information about creating saved searches, see *Using Saved Searches* in the NetSuite Help Center.

The directory listing for an employee always shows the following information:

- Employee Name
- Job Title
- Office Phone Number
- Mobile Phone Number
- Email Address
- Action Button

Three additional fields can appear in the directory listing for each employee. **Configurable Field 1** will be displayed following the employee name and job title. As an administrator, you can choose which fields appear from the following table:

Configurable Field	Standard Fields	Custom Field Types
Configurable Field 1	Subsidiary Location Department	Free-Form Text List/Record
Configurable Fields 2 & 3	Department Location Fax Hire Date Home Phone Phone Sales Role Subsidiary Supervisor Type	Free-Form Text List/Record Date Date/Time

**Note:** For standard fields such as Subsidiary and Sales Role to appear, you must first enable the appropriate features.

### To configure the employee directory and org chart:

1. Go to Setup > Employee Directory/Org Browser > Preferences.
2. To use the Employee Directory, check the **Enable Employee Directory** box.
  - a. The Directory Layout section shows the fields that are always visible in the Employee Directory. Select the field you want to appear under the employee name and title from the **Configurable Field 1** list.
  - b. Select the fields you want to appear on the righthand side of the directory listing from the **Configurable Field 2** and **Configurable Field 3** lists.
3. To use the Org Browser, check the **Enable Org Browser (Org Chart)** box.

- a. The Org Browser Layout sections shows the fields that are always visible in the Org Browser. Select the two additional fields you want to display from the **Configurable Field 1** and **Configurable Field 2** lists.
  - b. Under Org Browser Top-Level Employees, select one or more employees who should appear at the top of the Org Browser with no manager above them.
4. Under Directory and Org Browser Filters, select the saved search you want to use to filter employees out of the directory and org browser from the **Saved Search** dropdown list. To revert to the saved search that was included by default with the Employee Directory SuiteApp, select **Employee Directory (Default)** from the **Saved Search** dropdown list. For more information about saved searches, see
5. Click **Save**.

## Using the Employee Directory

You use the employee directory to search for employees by name, location, department, job title, or (with NetSuite OneWorld accounts) subsidiaries. After performing the search, you can filter your results further by all of these categories.

### To use the employee directory:

1. From your Employee Center role, go to My Company > Employee Directory.
2. On the Employee Directory page, start typing the string that you want to search for. As you type, the search field shows employees who match your search term in their name, location, department, job title, or (with NetSuite OneWorld accounts) subsidiary. The more characters you type, the more narrowed the search becomes.
3. To search for employees who have your search string in their location, department, job title, or subsidiary, click the appropriate link in the search field.
4. If you see the person you are searching for in search field, click their name.
5. To perform a full search, press Enter or click the **Search** button.
6. The Employee Directory page shows a list of employees who match your search term.
7. To view an employee in the org browser, click the **View In Org Browser** button on the righthand side of the employee entry.

For more information about the org browser, see [Using the Org Browser](#).

### To filter your search results:

1. If the search returned a large number of results and you want to narrow the results, click **Filters** to open the filter pane.
2. To apply a filter (that is, view only employees with particular characteristics), check the appropriate box under **Locations**, **Departments**, **Job Titles**, and/or **Subsidiaries**.
3. By default, the filters pane lists up to five entries for each category, ranked by the number of employees that match in each entry. To add another filter under a category, click **Add** and begin typing until you see the entry you want to use.
4. Below the filter area, the filters that you have applied appear. To remove a filter, clear the appropriate box or click the close button on the applied filter.

### To give Kudos from the employee directory:

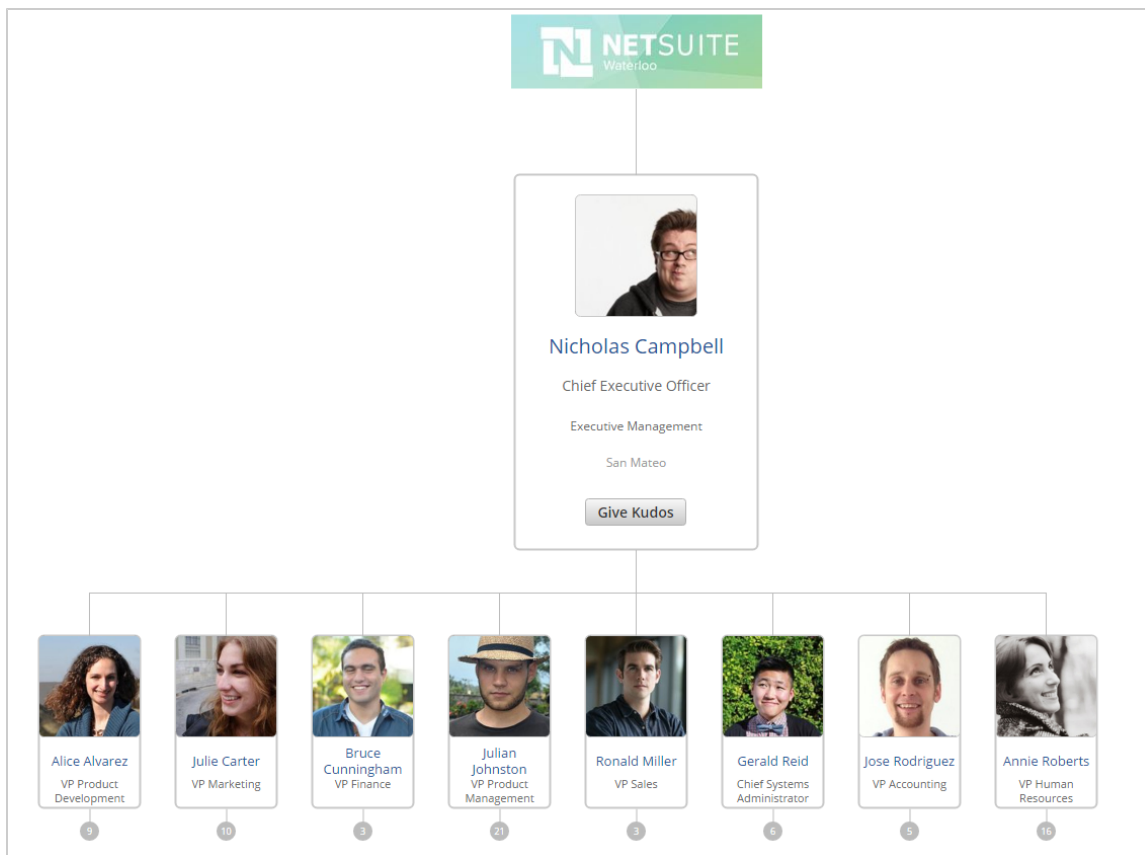

1. On the Employee Directory page, search for the person you want to give Kudos to.

2. Click the **Give Kudos** button on the righthand side of the employee entry.
3. Optionally, you can add names to give Kudos to more than one coworker at once. Begin by typing another coworker's name. As you type, suggested names appear that match what you have typed. Click the name to add the person.
4. In the text field, type a description for the Kudos that explains why you want to recognize your coworker(s).
5. Under Supported Values, click one or more organizational values that this Kudos demonstrates. When you hover over a values icon, a description of that value appears.
6. Click **Give Kudos**.

## Using the Org Browser

The Org Browser provides an intuitive, interactive, and graphic method of viewing the organizational chart for your company, viewing the supervisors and direct reports of fellow employees. You can also use the employee directory to locate employees. For more information, see [Using the Employee Directory](#).

To begin, from your Employee Center role, under My Company, click Org Browser. The Org Browser page appears showing a tree structure graphic depicting your organization's hierarchy, centered on the person at the top of your organization, such as your president or chief executive officer. On each person's card, below their name, their job title and other configurable information appears.

You can navigate around the org browser in the following ways:

- To center the org browser on any person, click that person's card.

- Underneath that person's card, you see the people who report directly to them.
- You can also center on a person by typing their name in the search field.
- To zoom in or out on the org browser, use the scroll button on your mouse or click the zooming tool on the left side.
- To move around the org browser, click and drag in the direction that you want to move.
- For employees who are not centered in your view, a number below their cards shows the number of people they have reporting directly to them.
- If you are viewing an employee lower down in your company's hierarchy, their direct manager is replaced on the org browser by a number that shows the number of levels of management above them. When you hover over that number, the reporting relationship up to the top of your organization appears.
- To download a copy of your current view of the org browser, click the Download button beside the search field.
- To find a person by name, start typing their name in the **Find people by name** field.

### To give Kudos from the Org Browser:

1. On the Org Browser page, locate the person you want to give Kudos to, and click their card to center them.
2. Click **Give Kudos** on their card.
3. Begin typing a coworker's name. As you type, suggested names appear that match what you have typed.
4. If you want to give Kudos to more than one coworker at once, then keep adding names.
5. In the text field, type a description for the Kudos that explains why you want to recognize your coworker(s).
6. Under Supported Values, click one or more organizational values that this Kudos demonstrates. When you hover over a values icon, a description of that value appears.
7. Click **Give Kudos**.

# Employee Center Management

The Employee Center is a role designed for regular employees in your organization. In the Employee Center, your employees can access their information, submit requests (such as time-off requests and purchase orders) for approval, submit timesheets, and so on. You can manage the Employee Center to ensure that employees have access to the tools and information they need.

## About the Employee Center Role

When you add the Employee Center role on an employee's record, you grant the employee access to the Employee Center. From the Employee Center, employees can do the following:

- View their paycheck history, employee profile, and W-4
- Enter and view time reports
- Enter and view expense reports
- Enter and view purchase requests
- Enter and view activities such as tasks and phone calls
- Access their calendar
- Access documents and relationship records

With NetSuite SuitePeople, employees can perform the following additional tasks in the Employee Center:

- Request time off and view their time-off balances
- Recognize the achievements of their peers with Kudos
- Browse the Org Chart and search the Employee Directory

For more information about SuitePeople, see [SuitePeople Overview](#).

The Employee Center dashboard can be customized by employees to show the information that they most need. Click **Personalize** in the upper right of the dashboard, or in the Settings portlet, click **Personalize Dashboard**. For more information about personalizing your dashboard, see the help topic [Dashboard Personalization](#).

**Note:** The Employee Center dashboard cannot be customized by an employee if the lock icon (🔒) appears beside the word “Home” on the left side of the home page.

The screenshot displays the Oracle NetSuite Employee Center dashboard for user M Wolfe. The dashboard is divided into several sections:

- Home:** Contains a 'Personalize' button (highlighted with a red box) and a 'Layout' dropdown.
- Payroll:** Includes a 'Paycheck History' table with columns for DATE, AMOUNT, and PRINT. It also has a 'Form W-4' link and a 'View All Paychecks' button.
- Purchases:** Includes a 'Purchase Orders/Requests' table with columns for REF #, SUBMITTED DATE, STATUS, and AMOUNT. It also has an 'Enter Purchase Request' button and a 'View All Requests' link.
- Tasks:** Includes a 'TOTAL: 1' summary, a 'VIEW' dropdown, a 'QUICK SORT' dropdown, and a table with columns for NEW, EDIT | VIEW, DUE DATE, TASK TITLE, COMPANY, PRIORITY, and STATUS.
- Kudos:** Includes a 'Give Kudos to...' form.
- Home Links:** Includes a 'Find Link...' search bar and a list of links including My Information, Time Tracking, and Activities.

## Understanding Restrictions for Employee Center Data

The standard Employee Center role is set up to filter the purchase orders, expense reports, and time reports that employees with this role are permitted to view. Employees logging in with this role can see purchase orders, expense reports, and time reports that they own. If they supervise other employees and are listed as an approver, they can also see purchase orders, expense reports, and time reports that their employees own.

In OneWorld accounts, subsidiary restrictions are not enforced to filter time and expense report records that users with this role can see. In OneWorld accounts, subsidiary restrictions are enforced to filter the records that users with this role can see, except for times reports, purchase orders, and expense reports. Subsidiary restrictions for the role are checked first, then subsidiary restrictions for the individual users.

Customized Employee Center roles built from the standard Employee Center role filter viewable records in this same manner by default.

## Purchase Approvals and Currencies

If you use the Multiple Currencies feature, when you view purchase requests and purchase orders that require approval, how currency fields are displayed depends on whether you customize the view.

### Non-customized View

- **Amount** – shows amount in base currency
- **Base Currency** – shows currency in base amount

### Customized View

- **Amount (Foreign Currency)** – shows amount in foreign currency

- **Currency** – shows foreign currency

## Standard Portlets

The following standard portlets are included in the Employee Center. Some of these portlets appear the first time that you log in to the Employee Center, and other portlets are accessible from the Personalize Dashboard palette. You can add custom portlets to the Employee Center as well.

Portlet	Description
Calendar	Lists activities for a selected period ordered by date and time, with links to drill down into individual activity records. In the portlet, you can select between a daily, weekly, monthly, or agenda view. You can choose to display your own calendar or a public calendar for another entity within the organization. You can click the <b>Set Up</b> menu option for the portlet to display a popup where you can define the types of activities to display in the calendar.
Custom Search	(Can display up to six on the Home page.) Shows results from a saved search. In the portlet, click <b>Set Up</b> to select the saved search, specify a custom title for the portlet, the number of results to display, whether to drill down into search results in the portlet or on a new page, and, if the Inline Editing feature is enabled, whether to enable inline editing of search results.  <div>  <b>Note:</b> When placed in the right or left columns of a dashboard, custom search portlets display only the first four results columns of the saved search. When placed in the center column, they display the first nine results columns. Custom search portlets also include New, Edit, and View columns with links for each result record. </div>
Employee Center — Home Links	Provides links to different records within your Employee Center, such as documents, contacts, and timesheets.
Expenses	Shows you the status of up to five of your latest submitted expense reports. You can also click the <b>Enter Expense Report</b> button to enter new expense reports. Links to your expense reports are not available from the Home Links portlet.  <div>  <b>Note:</b> To use this portlet, the Expense Reports feature must be enabled. </div>
Kudos	Enables you to give Kudos to your coworkers to recognize a job well done. You can also view the other Kudos given in your company. This portlet is only available if your administrator has enabled the Kudos feature.
List	Shows a list of records of a selected type, with links to view, and, if you have permission, to edit individual records. Shows nine columns when placed in the center column of the dashboard; shows four columns when placed in the right or left column. In the portlet, click <b>Set Up</b> to select a type of record and the number of records shown.  <div>  <b>Note:</b> On some tabs, the available List portlets are configured to show predefined types of records. For example, the Activities page offers Tasks and Phone Calls list portlets. </div>
My Team	Displays a list of your direct reports, if you are a manager. This portlet appears on the Manager view of your Employee Center dashboard.
Payroll	Shows you the status of your last five paychecks, and allows you to view your Form W-4 information. Paycheck amounts are hidden by default; you can view paycheck amounts by clicking the eye icon. You can not access your paycheck history and Form W-4 information from the Home Links portlet.

Portlet	Description
	 <b>Note:</b> To use this portlet, the Payroll feature must be enabled.
Purchases	<p>Shows you the status of up to five of your latest submitted purchase requests or requisitions. You can click the <b>Enter Purchase Request</b> button or the <b>Enter Requisition</b> button to enter new purchase requests or requisition. Links to your purchase requests or requisitions are not available from the Home Links portlet.</p>  <b>Note:</b> To use this portlet, the Purchases or Requisitions feature must be enabled.
Quick Search	<p>Shows a form where you can quickly search for records of a selected type, using one selected filter field and entered keywords.</p> <p>In the portlet, click <b>Set Up</b> to define the type of records to search, then enter keywords in the portlet's text box and select a field name from the Search For dropdown.</p>
RSS/Atom Feed	<p>(Can display up to two.)</p> <p>Shows RSS or Atom feed URL content, from an external website or HTML document.</p> <p>In the portlet, click <b>Set Up</b> to select display options and a URL. NetSuite provides a number of standard RSS feed URLs, or you can choose Custom and enter another URL.</p>
Recent Records	<p>Shows a list of records that you have recently created, modified, or viewed.</p> <p>In the portlet, click the record to view it. If you have permission, an Edit link is also available. You can click it to open the record in edit mode.</p>
Recent Reports	<p>(Available on the Reports tabbed page.)</p> <p>Shows a list of reports that you have recently created, modified, or viewed.</p> <p>In the portlet, click the report name to view the individual report.</p>
Reminders	<p>Shows important tasks of selected types, usually that are past due or soon due to be completed.</p> <p>In the portlet, click <b>Set Up</b> to select types of reminders and to define the number of days in advance that reminders should be shown. Click on a reminder to go to the page where you need to take an action.</p>
Report Snapshots	<p>(Can display up to 10.)</p> <p>Each added portlet provides a graphical or list summary of a selected standard or custom report's data, with a link to view the underlying report.</p> <p>In the portlet, you can select a date range for data and click thumbnails to choose among chart types for graphical data. You can click <b>Set Up</b> to select the type of display and other layout options, including chart themes. You also can click menu options to print the report snapshot chart, download it to a PNG, JPG, PDF, or SVG file, or view the underlying report results.</p> <p>When the report snapshot portlet is in the left or right dashboard column, the list text truncates at 25 characters. To avoid this truncation, place the portlet in the middle column.</p> <p>Report snapshot list amounts are rounded to the nearest whole number and do not display decimal places.</p>
Search Form	<p>Shows a form to search for records of a selected type. Filter fields are based on system-defined defaults or a custom search form that you defined as preferred.</p> <p>In the portlet, click <b>Set Up</b> to select the search form to be used. Click <b>Full Search</b> to switch to the default search page for the selected record type. Click <b>Edit</b> to open the definitions page for the selected search form and make edits.</p>
Settings	<p>Shows links to user-level setup tasks.</p>  <b>Important:</b> The contents of this portlet are system-defined. This portlet cannot be removed or modified.
Shortcuts	<p>Shows links to selected pages, so you can navigate quickly to frequently used pages.</p> <p>In the portlet, click <b>Set Up</b> to reorder the listing of existing shortcut links or click <b>New Shortcut</b> to add a shortcut, if you know the URL of the page. If you do not know the URL, go to that page and click More &gt; Add to Shortcuts in the upper right corner of that page.</p>

Portlet	Description
Tasks	Shows a list of upcoming CRM tasks assigned to you, with links to view, and if you have permission, to edit, individual records. In the portlet, select a view and a sorting method, and click <b>Set Up</b> to define the number of tasks shown.
Time-Off	Provides you with a quick view of the time-off you have for the rest of the year, along with the time-off that you have taken and the time-off that you have booked. You can also click <b>Book Time-Off</b> to schedule more time off. This portlet is available only if your administrator has enabled the Time-Off Management feature.
Trend Graphs	(Can display up to five.) Shows a chart of key performance indicator (KPI) data with a time-based X axis. In the portlet, click thumbnails to choose among different chart types. You also can change the graph's X axis scale by selecting different time intervals from the dropdown list. Click <b>Set Up</b> to select a KPI to be graphed and layout options, including chart themes. You also can click menu options to print the trend graph chart or download it as a PNG, JPG, PDF, or SVG file.

## Granting Access to the Employee Center

### To assign the Employee Center role to an employee:

1. Go to Lists > Employees > Employees.
2. Next to the name of the employee to whom you want to assign the Employee Center role, click **Edit**.
3. Under **Email | Phone | Address**, enter an email address, if one has not already been entered.
4. Click the **Access** subtab.
5. Complete all access-related fields. For details, see [Giving an Employee Access to NetSuite](#).
6. In the **Role** field, select **Employee Center**.
7. Click **Add**.
8. Click **Save**.

 **Note:** Employees with Full Access roles in addition to Employee Center access do not count against your Employee Center licenses. If you remove an employee's Full Access role, the employee counts against your Employee Center licenses. To purchase additional licenses, contact your account representative.

## Employee Center Dashboard Publishing

 **Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Employee Center Dashboard Publishing feature includes the following:

- **Employee Center Publishing global permission** – Users with this global permission can publish a standard Employee Center dashboard for all Employee Center users in your organization. All Employee Center users see the same layout and the same portlets when they log in to NetSuite with their Employee Center role.

- **News Item record and permission** – Users who are assigned roles that include the News Items permission can create News Item records. News items appear on the Company News portlet on the Employee Center dashboard. For more information, see [News Items](#).
- **Manager dashboards in the Employee Center** – Employee Center users who are supervisors or managers have two dashboards in the Employee Center:
  - An Employee dashboard, where they can book time off for themselves, enter their own expense reports, keep track of contacts, and so on.
  - A Manager dashboard, where they can see information about and approve requests from their direct reports.

More information about the Manager dashboard is available in the Employee Center help.

 **Important:** After you enable the Employee Center Dashboard Publishing feature, any Employee Center dashboards that individual employees previously customized are replaced with a default dashboard. This dashboard can be edited only by users with the Employee Center Publishing global permission. If you disable the Employee Center Dashboard Publishing feature, previous versions of the Employee Center dashboard are restored.

## The Employee Center Publishing Permission

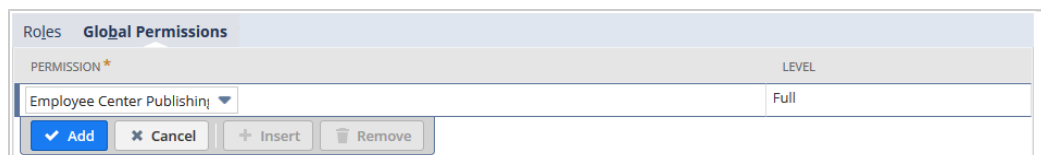

When you enable the Employee Center Dashboard Publishing feature, the Global Permissions feature is also enabled, if not already enabled (see the help topic [Using the Global Permissions Feature](#)). To use the publishing tool, which lets you create a standard Employee Center dashboard for all Employee Center users, you must assign the Employee Center Publishing global permission to a user. This user can then publish the Employee Center dashboard from the Employee Center role. Other users cannot customize their own dashboards, and a lock icon (🔒) appears on the dashboard. For more information about publishing the Employee Center dashboard, in the Employee Center help, see the section “Customizing the Employee Center for Your Organization”.

### To assign the Employee Center Publishing permission to a user:

1. Go to Lists > Employees > Employees.
2. Beside the employee who is responsible for publishing the Employee Center dashboard, click **Edit**.
3. Click the **Access** subtab.
4. On the **Roles** subtab, verify that the employee is assigned the Employee Center role.

5. On the **Global Permissions** subtab, from the **Permission** list, select **Employee Center Publishing**, and then click **Add**.

6. Click **Save**.

When this employee uses the Employee Center role, the Edit Dashboard button appears on the Employee Center home page.

## News Items

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

To share company news with your employees, you can create news items that appear on the Company News portlet in the Employee Center. If you have multiple locations set up for your company, you can create news items that appear for employees in specific locations. You can also create news items that appear for only managers. Managers can find manager-specific news on the Manager dashboard in the Employee Center.

## Prerequisites

To create news items, the Employee Center Dashboard Publishing feature must be enabled in your NetSuite account. For more information about the Employee Center Publishing feature, see [Employee Center Dashboard Publishing](#).

As well, you must be assigned a role that includes the News Item permission. By default, the News Item permission is included in the following NetSuite roles, with the full access level (view, create, edit, and delete access):

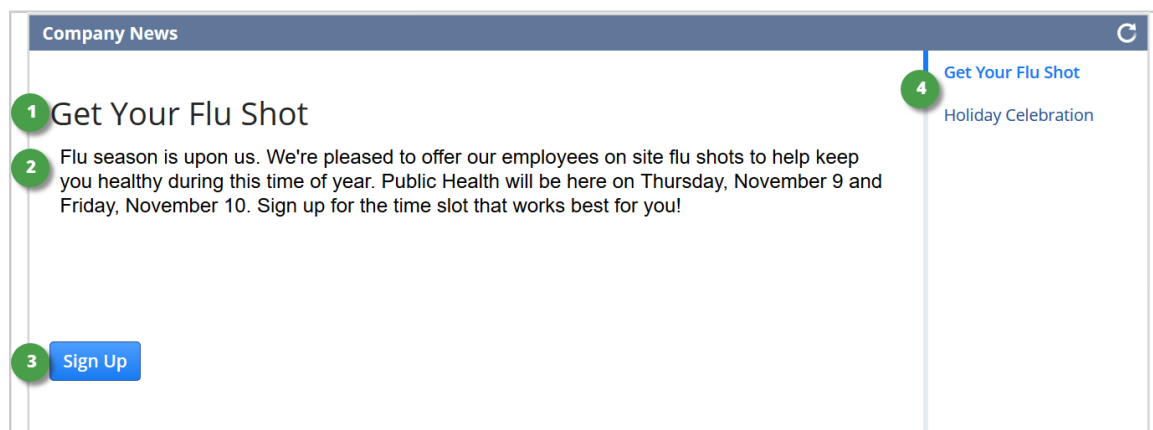

- Chief People Officer (CPO)
- Human Resources Generalist

For more information about permissions, see the help topic [NetSuite Permissions Overview](#).

## Adding News Items to the Company News Portlet

The five most recent news items appear on the Company News portlet in the Employee Center. Older news items do not appear.

The following image shows what a news item looks like in the Company News portlet:

1	The <b>headline</b> of the news item.
2	The <b>body</b> of the news item. You can format this text with different fonts, colors, and basic formatting (bold, italics, underline, numbered and ordered lists).
3	The <b>Call to Action</b> button. You can specify the text that should appear on the button and a link for the button. For example, you might want to link to a page on your company's intranet site.
4	Users can view headlines for other news items and click the headlines to read other news.

### To add news items to the Company News portlet:

1. Go to Lists > Web Site > News Items > New > New.
2. In the **Headline** field, enter a headline for the news item.
3. In the **Body** field, enter the text that makes up the body of the news item.
4. Additionally, you can set the following:
  - To include a button that users can click to learn more or perform a certain action, in the **Call to Action** field, enter the text that should appear on the button. In the **Call to Action Link** field, enter the link that opens when the user clicks the button.
  - To show this news item to only employees in a specific location, first, clear the **Available in All Locations** box. Then, in the **Locations** list, select one or more locations.

**Important:** Employees who are not associated with a location can see news items for any location. To learn how to associate an employee with a location, see [Associating an Employee with a Location](#).

- To show this news item to only managers, check the **Managers Only** box.
5. Click **Save**.

## Editing and Deleting News Items

### To edit news items:

1. Go to Lists > Web Site > News Items.
2. Beside the news item that you want to edit, click **Edit**.
3. Make your changes.
4. Click **Save**.

### To delete news items:

1. Go to Lists > Web Site > News Items.
2. Beside the news item that you want to delete, click **Edit**.
3. In the **Actions** menu, click **Delete**.

# Employee Offboarding

- [Terminating an Employee](#)
- [Termination Reason Tracking](#)
- [Deleting Employee Records](#)
- [Inactivating Employee Records](#)

## Terminating an Employee

When an employee leaves your company, you should modify the person's record to reflect the termination date and remove any previously granted user roles and access permissions. You can also inactivate the employee record if you want to prevent it from appearing in lists or as choices anywhere in your account. For more information, see [Inactivating Employee Records](#).

As part of terminating an employee, you specify a termination/release date. If you are using the Termination Reason Tracking feature, you also specify a termination category, termination reason, termination details, and whether or not the termination is regretted. For more information, see [Termination Reason Tracking](#).

If you are using NetSuite Payroll to pay this employee, you can create an individual paycheck to complete any financial obligation you have to the former employee. For more information, see the help topic [Viewing Individual Paychecks](#).

You can create an individual paycheck to complete any financial obligation you have to the former employee. For more information, see the help topic [Creating a One-Time Payroll](#).

### To modify a terminated employee's record:

1. Go to **Lists > Employees > Employees**.
2. On the Employees list, click **Edit** next to the name of the terminated employee.
3. Click the **Human Resources** subtab.
4. In the **Termination/Release Date** field, enter this person's last date of employment.

If you are using the Termination Reason Tracking feature, when you enter a termination/release date, you must also enter the following:

- a. **Termination Category** — Select whether the termination is voluntary or involuntary. A voluntary termination indicates the employee ended their employment and an involuntary termination indicates the company ended the employment.
  - b. **Termination Reason** — Select the reason for the termination. For details, see [Managing Termination Reasons](#).
  - c. **Termination Regretted** — Select whether or not the termination is regretted. A regretted termination indicates that the company regards the termination as a loss, meaning the employee was a high performer and an asset. A non-regretted termination indicates that the company does not see the termination as a loss. If you do not want to track this information, select **Unspecified** from the list.
  - d. **Termination Details** — Enter details of the termination.
5. Modify any other fields as required. For more information, see [Entering Employee Human Resources Information](#).
  6. Click the **Access** subtab.
  7. Remove all access permissions and assigned user roles.

8. Modify any other fields as required. For more information, see [Giving an Employee Access to NetSuite](#) and [Assigning Roles to an Employee](#).
9. Click the **System Information** subtab and then check the **Inactive** box if you do not want this employee's record to appear in lists or as choices anywhere in your account.  
To view inactivated employee records or reactivate them, go to Lists > Employees > Employees, and check the **Show Inactives** box.
10. Modify any additional fields on the employee record as required.
11. Click **Save**.

 **Note:** You cannot delete an employee record that has any associated transactions.

### To complete financial obligations to a former employee:

You must follow the laws set by your jurisdiction to complete financial obligations to a terminated employee. Depending on the state that an employee works in, you might need to pay an employee on the same day that employment is terminated. Otherwise, you might be able to process the employee's final paycheck in your regular payroll batch.

If you use NetSuite Payroll, the process for compensating a terminated employee is generally the following:

1. Update payroll information. For instructions, see the help topic [Updating Payroll Information](#). This ensures that the employee's new status is updated with the payroll tax engine.
2. If you need to process payroll on the same day that employment is terminated, create a one time payroll that includes only the terminated employee. For instructions, see the help topic [Creating a One-Time Payroll](#).

 **Important:** For same-day payroll batches, a fee applies. Direct deposits always take at least two business days to process. To pay the employee with a check instead of direct deposit, check the **No Direct Deposits** box on the Payroll Batch page.

If you do not need to process a one-time payroll batch for the terminated employee, then the employee is paid during the first regular payroll cycle that includes the termination date.

## Mass Deleting an Employee's Events

When an employee leaves your company, an administrator can use the delete events mass update to delete the events they have scheduled. This is the only way to delete another employee's events that are marked Private or Show as Busy.

Roles other than administrator cannot delete events for which they are not the organizer or owner. When performing the mass update, administrators may be presented with public events that they cannot delete.

### To perform the delete events mass update:

1. Go to Lists > Mass Update > Mass Updates.
2. Click **Activities**, and then click **Delete Events**.
3. On the **Criteria** subtab in the **Filter** column, select **Calendar**.
4. In the window that appears, select the employee whose calendar you want to delete.
5. Click **Set**.
6. Click **Preview**.
7. On the Mass Update Preview Results page, click **Perform Update**.

## Termination Reason Tracking

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

When you terminate an employee, you must specify a termination/release date. If you have the Termination Reason Tracking feature enabled, you must also select a termination category and a termination reason from a list of options, as well as specify termination details, and whether or not the termination is regretted.

If you view the employee record of an employee who was terminated before this feature was enabled, these fields are populated by the string "Unspecified".

NetSuite has several default termination reasons, but you can change them or create your own. For more information, see [Default Termination Reasons](#).

The Termination Reasons page shows all of the termination reasons in your account. If you no longer want to use a reason, but it has been used in the past, then you can make it inactive. To view inactivated termination reasons, select the **Show Inactives** box.

If the Workforce Analytics feature is also enabled, you can see a high-level snapshot and synopsis of the employees who are leaving your company and the reasons why they are leaving on the Turnover Analysis page (Reports > Employees/HR > Turnover Analysis). For more information, see [Workforce Analytics](#).

**Note:** When this feature is enabled mass update is not available, instead use NetSuite's Import Assistant to update data through import of a CSV file. For information, see the help topic [Importing CSV Files with the Import Assistant](#). Also, when this feature is enabled inline editing is disabled.

For more information about the Termination Reason Tracking feature, see the following help topics:

- [Managing Termination Reasons](#)
- [Default Termination Reasons](#)

## Termination Reason Tracking Roles and Permissions Requirements

For details about the permission requirements for termination reason tracking, see [Termination Reason Tracking Permission Requirements](#).

**Note:** If you want more control over what employee information is accessible by different NetSuite users, you can use the Advanced Employee Permissions feature. When this feature is enabled, you can use the employee permissions that come with this feature, which give you more control over what employee information certain roles can access. You can also customize employee permission that include all or set of standard fields and sublists from the employee record. For more information, see [Advanced Employee Permissions](#).

## Managing Termination Reasons

When you enable the Termination Reason Tracking feature, NetSuite provides several default termination reasons, but you can change them or create your own. For more information, see [Default Termination Reasons](#).

The Termination Reasons page shows all of the termination reasons in your account. If you no longer want to use a reason, but it has been used in the past, then you can make it inactive. Select the **Show Inactives** box to show all reasons.

#### To add a termination reason:

1. Go to Setup > HR Information System > Termination Reasons > New, or click **New Termination Reason** on the Termination Reasons page.
2. Enter a **Name** for the reason. Select a **Termination Reason Category** (Voluntary, Involuntary) from the list.
3. To make the reason inactive, check the **Termination Reason is Inactive** box.
4. To save and return to the Termination Reasons page, click **Save**. To save and create another new termination reason, click the down arrow, and click **Save & New**.

#### To edit a termination reason:

1. Go to Setup > HR Information System > Termination Reasons.
2. Click **Edit** beside the termination reason you want to edit.
3. Enter a **Name** for the reason. Select a **Termination Reason Category** (Voluntary, Involuntary) from the list.
4. To make the reason inactive, check the **Termination Reason is Inactive** box.
5. Click **Save**.

## Default Termination Reasons

If you are using the Termination Reason Tracking feature, you must specify a termination reason when you terminate an employee. NetSuite has a set of default termination reasons. You can change these or create your own. For more information, see [Managing Termination Reasons](#). For each termination reason, you also specify a termination category: Voluntary or Involuntary.

This is the list of default termination reasons that are available when you start using this feature.

Termination Reason Name	Termination Category
Attendance	Involuntary
Another Job	Voluntary
Disability	Involuntary
Dissatisfaction with Compensation	Voluntary
Dissatisfaction with Co-Worker	Voluntary
Dissatisfaction with Supervisor	Voluntary
Enlisted in Armed Forces	Voluntary
Family Reasons	Voluntary
Health Reasons	Voluntary
Insubordination	Involuntary
Involuntary Other	Involuntary

Involuntary Retirement	Involuntary
Job Abandonment	Voluntary
Job Position Eliminated or Changed	Involuntary
Leave of Absence and Did Not Return to Work	Voluntary
Marriage	Voluntary
Personal Reasons	Voluntary
Refusal to Follow Instruction	Involuntary
Refused Suitable Work	Voluntary
Relocation	Voluntary
Return to School	Voluntary
Unsatisfactory Performance	Involuntary
Violation of Rules	Involuntary
Voluntary Other	Voluntary
Voluntary Retirement	Voluntary
Without Notice or Reason	Voluntary
Working Conditions	Voluntary
Work Schedule	Voluntary

## Deleting Employee Records

You can delete an employee record, but normally only in an unusual situation, such as creating the employee record in error. If an employee record has any transactions associated with it, it cannot be deleted.

If an employee is no longer actively working for your company, you should inactivate the employee record instead. For more information, see [Inactivating Employee Records](#) and [Terminating an Employee](#).

### To delete an employee record:

1. Go to Lists > Employees > Employees.
2. On the Employees list, click **Edit** next to the name of the employee record you want to delete.
3. On the **Actions** menu, click **Delete**.
4. When prompted to confirm, click **OK**.

## Inactivating Employee Records

You can inactivate employee records for employees who no longer actively work for your company. This enables you to remove their access to NetSuite, while retaining the history of their employment with your company.

When you inactivate an employee record, you can no longer select it in employee fields in NetSuite.

You can also delete an employee record, but you normally would only do that if the record was created in error or if you had some other reason to recreate the employee record. For more information, see [Deleting Employee Records](#).

Here are some cases in which you would want to inactivate an employee record:

- You are terminating the employee. In this case, you do not want to delete the employee record because it contains information that you might need in the future for record-keeping or auditing purposes. Also, you might rehire the employee and could make their record active again. For more information, see [Terminating an Employee](#).
- The employee is taking a leave of absence, so you want to temporarily remove their access to NetSuite and restore it later.

When you inactivate an employee record:

- The employee's login credentials and role assignments remain intact. If they return to your company and you make their record active again, they can access NetSuite as they did before being inactivated.
- If the employee has scheduled reports, then the report schedules are automatically deleted.
- If the employee is the owner of calendar events, those events remain in the calendar.
- If the employee is the owner of saved searches, they remain in the list of saved searches.

#### To inactivate an employee record:

1. Go to Lists > Employees > Employees.
2. Check the **Show Inactives** box at the top of the list.
3. In the **Inactive** column, check the box next to the employee you want to inactivate.
4. Click **Submit**.

# Time-Off Management

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

- [Time-Off Management Overview](#)
- [Prerequisites for Using Time-Off Management](#)
- [Setting Up Time-Off Management](#)
- [Viewing an Employee's Time-Off Changes](#)
- [Viewing an Employee's Time-Off Balance](#)
- [Creating a Time-Off Change](#)
- [Approving or Rejecting a Time-Off Request as an Administrator](#)
- [Using Time-Off Management as an Employee or Manager](#)
- [Time-Off Reports](#)

## Time-Off Management Overview

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

NetSuite's Time-Off Management feature enables Human Resources to easily define and manage time-off plans according to company policies and assign them to employees based on location, department, class, or (with NetSuite OneWorld) subsidiary.

This includes the capability to:

- Create a set of time-off types for the different categories of time-off your employees can take.
- Define the time-off rules that accommodate the different policies at your company.
- Configure how NetSuite handles changes to these rules at specific employee milestones.
- Automatically set up the system to handle eligibility and entitlement.
- Automatically set up accruals based on a fixed amount per period or hours worked (NetSuite Payroll).
- Automatically set up the system to handle balance and carryover limits.
- Easily review and manually make adjustments to employee's time-off balances.

Employees assigned to a time-off plan must be logged into Employee Center to submit their time-off requests. Managers can review and approve time-off requests either from an email message or from the Employee Center. All time-off functions can be found in the **Home Links** portlet, under **Time-Off**.

NetSuite's Time-Off Management feature includes the following topics to get you started with managing time-off for employees:

- [Setting Up Time-Off Management](#)
- [Assigning a Work Calendar to an Employee](#)
- [Creating a Time-Off Type](#)

- [Creating a Time-Off Plan](#)
- [Creating a Time-Off Rule](#)
- [Assigning a Time-Off Plan to an Employee](#)

## Integrating Time-Off Management with Payroll

When you are using NetSuite Payroll (U.S. Payroll) and the Time-Off Management feature is enabled, accruals calculated in time-off are integrated with NetSuite Payroll and can be reported on employee's pay statements. Alternatively, accruals that are calculated in NetSuite Payroll based on hours worked can be automatically updated in time-off management when the payroll batch is committed. For more information, see the help topic [Time-Off Management and Accrued Time](#).

Accruals are calculated based on the options that you select when you create a time-off rule in a time-off plan. For more information, see [Creating a Time-Off Rule](#).

After you set up how accruals are calculated for a time-off plan, you must also set up accrued time on the employee record for each employee that uses NetSuite Payroll. For more information, see the help topic [Setting Up Accrued Time for an Employee](#).

## Integrating Time-Off Management with Time Tracking

If you are using time transactions to track employee time and to bill time to projects, or if you are using NetSuite Payroll, time usage is automatically reflected in payroll. Time entry records are automatically generated whenever a time-off request is approved. You can view automatically generated time entry records under the **Time Tracking** subtab of the employee record. For more information, see [Managing Time Tracking](#).

 **Note:** When the **Require Approvals on Time Records** box is checked on the Accounting Preferences page, under the Time & Expenses subtab, time-off entries generated from approved time-off requests cannot be edited. To allow employees to make updates, leave this box unchecked. For more information, see the help topic [Time Tracking](#).

## Prerequisites for Using Time-Off Management

This section outlines the prerequisites for using the time-off management feature.

### Installing the Time-Off Tracking SuiteApp

 **Important:** To install the Time-Off Tracking SuiteApp, you must have the Time-Off Management feature enabled (Setup > Company > Enable Features > Employees > HR Information System > Time-Off Management). If you do not see this feature on the Enable Features page, you need SuitePeople provisioned on your account. For more information, see [SuitePeople Overview](#).

The Time-Off Tracking SuiteApp enables employees to make time-off requests within their Employee Center role. It also provides a single-stage approval workflow that routes each request to the

employee's supervisor. To customize the logic, you can make a copy of the workflow and modify it as necessary.

Install the Time-Off Tracking SuiteApp:

- Bundle Name: **Time-Off Tracking**
- Bundle ID: 112449

This is a managed bundle and is automatically updated whenever there are updates. These issue fixes and enhancements are available after the SuiteApp is updated in your account.

For more information about installing SuiteApps, see the help topic [Installing a Bundle](#).

The Time-Off Tracking SuiteApp also includes a set of saved searches that you can use as reports. For more information, see [Time-Off Tracking Reports](#).

## Time-Off Management Roles and Permissions Requirements

The Time-Off Administration permission is required to use the Time-Off Management feature. The standard roles that come with this permission are HR Generalist, Administrator, and Chief People Officer (CPO). For details, see [Time-Off Management Permission Requirements](#).

You can also create custom roles that include this permission. For more information, [Customizing or Creating NetSuite Roles](#).

If your role has the appropriate permission, as many manager roles do, you can review time-off requests before employees take the time off, and approve or reject them as needed.

Employees in your company who are assigned a time-off plan can conveniently submit time-off requests and view their time-off balances from the Employee Center.

Managers can review requests from an email message or from the Employee Center.

 **Note:** If you want more control over what employee information is accessible by different NetSuite users you can use the Advanced Employee Permissions feature. When this feature is enabled, you can use the employee permissions that come with this feature, which give you more control over what employee information certain roles can access. You can also customize employee permission that include all or set of standard fields and sublists from the employee record. For more information, see [Advanced Employee Permissions](#).

## Setting Up Time-Off Management

 **Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

Before setting up time-off management, consider how your company's time-off policies are applied to employees. You should think about the differences between employees, with regards to the amount of time-off they are entitled to, how unused time-off is dealt with at the end of the year, and how time-off is accrued. You can create multiple time-off plans to accommodate these differences.

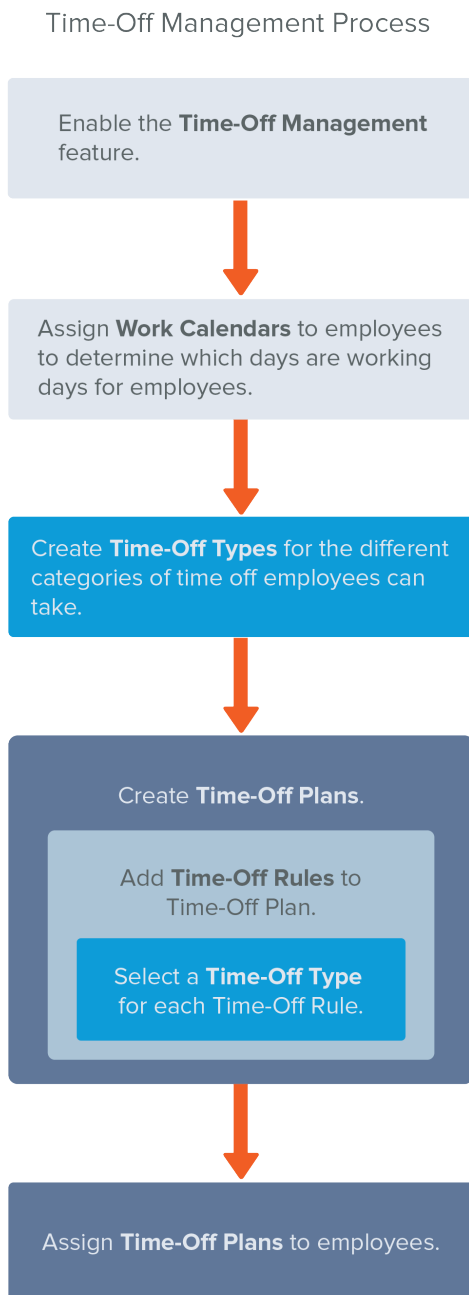

Time-off plans contain the time-off types and time-off rules that reflect your company's time-off policies. Create the time-off types so that they match the specific leave types at your company, such as

vacation time and sick leave. The time-off rules define how to handle time-off eligibility, entitlements, accruals, and carry over during an employee's tenure with the company.

The following topics must be completed to set up time-off management:

- Assigning a Work Calendar to an Employee
- Creating a Time-Off Type
- Creating a Time-Off Plan
- Creating a Time-Off Rule
- Assigning a Time-Off Plan to an Employee

The process for setting up Time-Off Management looks like this:

## Assigning a Work Calendar to an Employee

When you are using the Time-Off Management feature, you should assign a work calendar to employees on the employee record so that the system can determine which days are working days for the employee, which it uses to calculate the number of hours to deduct from an employee's balance when a time-off request is submitted. For more information, see the help topics [Setting Up a Work Calendar](#) and [Assigning a Time-Off Plan to an Employee](#).

## Creating a Time-Off Type

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

When setting up time-off management, the time-off types need to be created before the time-off plan. Time-off types enable you to define the different categories of time-off that employees at your company are entitled to take.

For example, you would create a time-off type for vacation and another time-off type for sick leave. It is important that when you create these time-off types that they are consistent with your company time-off policies.

You can create unlimited time-off types to reflect the various time-off policies at your company. You can add multiple rules to the same time-off type to specify the different rules to apply during an employee's tenure. For more information, see [Creating a Time-Off Rule](#).

View the [Creating Time-Off Types](#) video.

### To create a time-off type:

1. Go to Setup > HR Information System > Time-Off Type > New.
2. In the **Name** field, enter a unique name for the type. The name specified here appears in time-off lists for time-off requests, time-off plans, and time-off changes.
3. In the **Display Name** field, enter how you want the time-off type name to appear to employees. For instance, you might have different time-off types for different subsidiaries, departments, or locations, but you want the type to appear the same to all employees.

4. Check the **Track Only** box if you only want to record usage without having an entitlement and accruing a positive balance.

When you change an existing time-off type to track-only, future accruals are not calculated. All balance entries prior to the change are saved and displayed in the time-off changes record. For more information, see [Viewing an Employee's Time-Off Balance](#).

5. Select a **Payroll Item** if:
  - You want to configure the system to automatically create time entries with the correct payroll item. This is useful if you are running NetSuite Payroll because the time entries are used to calculate time-off usage against each payroll item. It is also useful for employees who track time because it enables them to see their booked time-off on their timesheet.
  - You want accruals to be calculated on an hourly basis when using NetSuite Payroll. For more information on calculating accruals on an hourly basis, see [Creating a Time-Off Rule](#).

**Important:** A time-off type can only be associated with one payroll item. Payroll items used with the Time-Off Management feature must be an Earning type. For more information, see the help topic [Creating Payroll Items](#).

6. In the **Minimum Increment** and **Increment Unit** fields, specify the minimum increment of time-off required for this type. Time-off requests cannot be for less than this amount and must be multiples of this amount. Leave the field value at zero or blank to allow employees to enter any value.
7. From the color picker, select the color that you want to associate with this time-off type.
8. Click **Save**.

Next, create the time-off plan and add the types you created to it. For more information, see [Creating a Time-Off Plan](#).

### To inactivate a time-off type:

1. Go to Setup > HR Information System > Time-Off Type.
2. Click **Edit** next to the time-off type you want to make inactive.
3. Check the **Inactive** box if you do not want this time-off type to appear in lists.

If the time-off type is assigned to a time-off plan, you first need to remove it from the plan before it can be inactivated. To view a list of inactive types, go to the list page view and check the **Show Inactives** box.

**Note:** When a time-off type is inactivated, any time-off rules associated with it are hidden, all future accruals are deleted, and any unused time-off expires at the end of the year without a carryover. Any manual changes and approved time-off requests for a future date need to be manually removed, if required.

### To delete a time-off type:

1. Go to Setup > HR Information System > Time-Off Type.
2. Click **Edit** next to the time-off type you want to delete.
3. Select **Delete** from the **Actions** menu.
4. When prompted to confirm the deletion, click **OK**.

You cannot delete time-off types if they are assigned to a time-off plan, or if a balance change or time-off request was made against it. The time-off type needs to be removed from the plan, and all time-off changes and requests must first be deleted before the time-off type can be deleted.

## Making Changes to a Time-Off Type

You can edit a time-off type at anytime, however, if you need to make a change that affects accruals for a large number of employees, NetSuite recommends that you make the change at the end of business day. This gives the system enough time to implement the changes. You should also avoid making any changes that affect accruals on an actual accrual day.

To edit a time-off type, go to Setup > HR Information System > Time-Off Type and click **Edit** beside the time-off type you want to change.

## Creating a Time-Off Plan

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

A time-off plan contains the time-off types and rules that dictate how each time-off type is applied. Rules define how eligibility, accruals, entitlements, and carryover work for employees in the plan, and how they evolve over each employee's tenure with the company.

Make sure you have set up and defined the time-off types before you create the time-off plan. For more information, see [Creating a Time-Off Type](#).

View the [Creating Time-Off Plans](#) video.

### To create a time-off plan:

1. Go to Setup > HR Information System > Time-Off Plan > New.
2. In the **Name** field, enter a name for the time-off plan. This name appears wherever you are required to select a time-off plan, such as the employee record. Name the plan so that you or someone else in HR can easily pick the right plan to assign to each employee.
3. Check the **Days Available Includes Future Accruals for the Year** box if you want the number of days available to employees who are requesting time-off to include their forecasted accruals through to the end of the year. Clear the box if you want the number of days available to include only time-off that employees have accrued to date.
4. From the **Reset Annual Entitlement At the Start Of** list, select when the entitlement period starts. For example, if employees are entitled to 15 days, and if April is selected from the list, the entitlement period starts on April 1st. The default setting is January.
5. You can only assign this plan to employees who are associated with the department, class, location, and subsidiary you set here. If you do not set a specific department, class, location, or subsidiary, there is no restriction on who can be assigned this plan.
6. Click **Save**.

After you have saved the plan, you can define the time-off rules. For more information, see [Creating a Time-Off Rule](#).

### To inactivate a time-off plan:

1. Go to Setup > HR Information System > Time-Off Plan.
2. Click **Edit** next to the time-off plan you want to make inactive.
3. Check the **Inactive** box if you do not want this time-off plan to appear in lists.

Time-off plans assigned to employees need to be removed from the employee record before they can be inactivated. To view a list of inactive plans go to the list page view and check the **Show Inactives** box.

### To delete a time-off plan:

1. Go to Setup > HR Information System > Time-Off Plan.
2. Click **Edit** next to the time-off plan you want to delete.
3. Select **Delete** from the **Actions** menu.
4. When prompted to confirm the deletion, click **OK**.

When you attempt to delete a time-off plan that has employees assigned to it, a popup window appears. Click the link in the window to view a list of all the employees that are assigned to the plan. For each employee, you must go to the employee record and remove or reassign the plan before it can be deleted.

## Making Changes to a Time-Off Plan

You can make changes to a plan at any time, including the rules within the plan. Any future time-off changes are automatically updated by the system to reflect the new settings after the plan is saved.

To make changes to a time-off plan, go to Setup > HR Information System > Time-Off Plan. Click **Edit** next to the time-off plan you want to change.

 **Note:** If you are removing rules from a plan, you cannot delete the last rule while it is assigned to employees. You must either add another rule or unassign the plan from all employees before it can be deleted.

## Creating a Time-Off Rule

 **Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

After you have created the time-off plan, you must define and apply rules to the time-off plan to be able to select and assign it to an employee. Time-off rules allow you to specify how you want employees to accumulate time-off over a period of time. Accruals can also be based on either a fixed amount per period or hours worked. When using NetSuite Payroll, accruals would be based on hours worked. If accruals are based on a fixed amount per period, you can choose whether accruals should be proactive or retroactive, and specify the frequency (weekly, bi-weekly, monthly, bi-monthly, annually). Select proactive if employees accrue time-off for the period they are about to work. Select retroactive if employees accrue time-off for the period they have already worked.

If required, you can also set up how to handle employee balance and carryover limits, which tells the system what to do with employees' unused time-off at the end of the year.

 [View the Creating Time-Off Rules video.](#)

### To create a time-off rule:

1. Go to Setup > HR Information System > Time-Off Plan.
2. Click **Edit** next to the plan that you want to define rules for.
3. Click **New Time-Off Rule**.
4. In the **Time-Off Type** field, select the type of time-off to apply to the plan.  
Click **New** to create a new type for this plan. For more information, see [Creating a Time-Off Type](#).
5. Specify the minimum tenure for this time-off type and whether the tenure is in months or years. Typically, minimum tenure is used to increase the amount of time-off employees are entitled to over a specific period of time, but it can also be used to automatically adjust an accrual or carryover rule at an employment milestone.

For example, you may want employees to start with 10 vacation days and then set an increase after five years of employment to 15 vacation days. To do this, you would add two time-off rules to the plan using the same time-off type; one rule would have a minimum tenure of zero with an

entitlement of 10 vacation days, and the second rule would have a minimum tenure of five years with an entitlement of 15 vacation days.

Next, set up how you want employees to accumulate time-off over a period of time.

### To set up time-off accruals:

1. To automatically calculate accruals, under **Accrual Method**, check the **Automatically Accrue** box.
2. Select whether accruals are based on a **Fixed Amount Per Period** or **Hours Worked (NetSuite U.S. Payroll)**.
3. If accruals are based on hours worked, the accruals must be configured on the employee record. For more information, see the help topic [Setting Up Accrued Time for an Employee](#).
4. If accruals are based on a **Fixed Amount Per Period**, select whether you want to accrue time proactively or retroactively, from the **Accrual Type** list. Select **Proactive** when you want employees to accrue time-off for the period they are about to work. Select **Retroactive** when you want employees to accrue time-off for the period they have already worked.
5. If you selected **Proactive** for the accrual type and set the **Minimum Tenure** to zero, choose one of the following in the **Opening Balance for New Employees** field:
  - **Full Amount for Accrual Period** — Employees' first accrual is the full amount specified for the accrual period, applied either on their start date or the first day they are eligible to accrue based on the rules defined in their plan.
  - **Prorated Amount for Accrual Period** — Employees' first accrual is a prorated amount based on the number of working days remaining in the accrual period, applied either on their start date or the first day they are eligible to accrue based on the rules defined in their plan.
  - **Zero** — Employees' first accrual takes place on the next regularly scheduled accrual date.
6. In the **Accrual Frequency** field, choose when time-off accrues.
7. If you select **Biweekly** or **Weekly** as the accrual frequency, set the day of the next accrual. This determines the calendar day on which the accrual is applied.

 **Note:** Annual and monthly accruals automatically occur on the first day of the year/month for proactive accruals and on the last day of the year/month for retroactive accruals. Semi-monthly accruals occur automatically on the 15th and the last day of each month for both proactive and retroactive accruals.

8. In the **Entitlement** field, enter the number of days or hours that employees earn each year.
9. In the **Entitlement Unit** field, specify whether the entitlement is in days or hours.  
The **Accrual Amount** and **Accrual Amount Unit** fields display the accrual rate based on your selections.
10. Check the **Set Accrual Limit** box if you want to enable an accrual limit.
11. In the **Accrual Limit** field, enter the default number of days that you want your employee's time-off to cap out at. For example, if you enter 15 days, your employee's accruals automatically adjust when they hit this cap. For employees with days that exceed this cap, it will not be debited from the employee's amount of time-off. Instead, they will stop accruing until their existing time-off does not exceed the cap.

The **Accrual Limit Unit** field displays the accrual limit rate based on your selections.

After setting up accruals, you can configure how time-off balances and carryover limits are handled. This determines how unused time-off is handled at the end of the year.

The process for setting up time-off accruals looks like this:

### To set up balance and carryover limits:

1. If you want unused time-off to be deducted from an employee's balance and not carried over into the next year, under **Balance and Carryover Limits**, clear the **Allow Employees to Carryover Unused Time-Off** box.
2. If you allow carry over, check the **Limit the Amount of Time-Off Employees Carry Over** box if you want to restrict how much unused time-off can be carried over into the next year.
3. If you limit the amount of carried over time-off, in the **Maximum Carryover** and **Maximum Carryover Unit** fields, enter the maximum amount of time each employee is allowed to carry over.

4. If you want carried over time-off to expire after a specific period of time, check the **Expire Unused Carryover** box, and select which month the carried over time should expire.

For example, if you select March, employees have up until the end of that month to take this time-off. If they do not book the time before it expires, it is removed from their plan and they are no longer able to use it.

 **Note:** If you select a date in the past, the expiry does not occur until the following year. Also, if you change a carryover expiry month from a future date to a past date (or vice versa), the change does not occur until the following year. The only time the change takes effect in the current year is if the existing expiry month is in the future, and it is changed to a future date.

5. If you do not want to carry over negative balances at the end of the year for this time-off type, check the **Reset Negative Balances to Zero at Year End** box.

6. Click **Save**.

Repeat these steps for each rule you want to apply to this time-off plan. You can create multiple rules for one time-off type.

The process for setting up balance and carryover limits looks like this:

### To delete a time-off rule:

1. Go to Setup > HR Information System > Time-Off Plan.
2. Click **Edit** next to the plan that contains the rule you want to delete.
3. From the **Time-Off Rule** subtab, select **Edit** beside the time-off type that contains the rule you want to delete.
4. Select **Delete** from the **Actions** menu.
5. When prompted to confirm the deletion, click **OK**.

**Note:** If you are deleting multiple rules from a time-off plan, you cannot delete the last rule when the plan is assigned to employees. Either add a new rule or unassign the plan from all employees before deleting all of the rules in the plan.

## Assigning a Time-Off Plan to an Employee

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

When the Time-Off Management feature is enabled, a **Time-Off** subtab is added to your employee records. From here you can assign a time-off plan to your employees and look up their current time-off balances. Employees assigned to a time-off plan can submit time-off requests and look up their balances from the Employee Center for the time-off types they are eligible for, based on the rules defined in their plan. For more information about setting up the Time-Off Management feature, see [Time-Off Management](#).

### Before assigning a time-off plan to an employee:

- If you have not done so already, create an employee record for employees that you want to give access to time-off management. For more information on creating employee records, see [Adding an Employee](#).
- Make sure employees have access to time-off management from the Employee Center. For more information, see [About the Employee Center Role](#).

 [View the Assigning a Time-Off Plan video.](#)

### To assign a time-off plan to an employee:

1. Go to List > Employees > Employees.
2. On the Employees list, click **Edit** next to the employee you want to set up for time-off management.
3. In the **Supervisor** field, select the employee's supervisor. The supervisor specified here automatically receives any time-off requests submitted by the employee.
4. Click the **Time-Off** subtab.
5. In the **Time-Off Plan** field, select the plan to assign to the employee. If the time-off plan does not appear, check that rules are assigned to the plan. For more information, see [Creating a Time-Off Rule](#).
6. In the **Start Date for Time-Off Calculations** field, enter the date when you want to start time-off calculations for this employee. The date entered here is used to determine which time-off rule currently applies to the employee based on how long that employee has been with the company. This is different from the hire date on the employee record so that HR can configure when employment milestones happen for each employee.

For example, if your company acquired another company, you might want to use the date that company's employees started working for that company instead of the date of the acquisition.

**Note:** If you change an employee's start date after they have been assigned to a time-off plan, all future accruals, carry over, and expiry are automatically updated based on the new date.

7. Click the **Human Resources** subtab.
8. In the **Work Calendar** field, select a work calendar for the employee.

When a work calendar is selected for time-off management, it:

- tells the system which days are working days for the employee
- blocks out the days that are not considered working days when an employee fills out a time-off request
- calculates the number of hours to deduct from the employee's balance when a day is taken off

If no work calendar is selected, the system assumes that the employee works eight hours a day, Monday to Friday, with no holidays. For more information, see the help topic [Setting Up a Work Calendar](#).

9. If using NetSuite Payroll to accrue time-off based on hours worked, click the Payroll > Accrued Time subtab to set up accruals. For more information, see the help topic [Setting Up Accrued Time for an Employee](#)
10. Click **Save**.

## Viewing an Employee's Time-Off Changes

The Time-Off Changes page displays a list view of all the time-off change records for the employees at your company. A time-off change is automatically created when a time-off request for an employee is approved, when manual adjustments are made, when carryover is applied, and when automatic accruals are calculated. Each of these changes are individually recorded so that you can easily distinguish between the different types.

To view an employee's time-off changes, go to Setup > HR Information System > Time-Off Change. Use the **Filters** section to find a time-off change, or view a history of time-off changes for a specific employee or time-off type. To make multiple selections, hold down the Ctrl key.

**Note:** When a time-off request for a future date that was previously approved is rejected, the associated time-off change record is automatically deleted.

## Viewing an Employee's Time-Off Balance

To view an employee's time-off balance, go to Lists > Employees > Employees. On the Employees list, click **View** next to the employee whose time-off balance you want to check. Click the **Time-Off** subtab to view a summary of an employee's time-off balance for the entire year.

The **Available Now** subtab displays how much time-off an employee has left, and how much they have used and scheduled for the current year.

The Available Now subtab includes:

- **Available This Year** — Includes all future accruals for the current year only when the **Days Available Includes Future Accruals** box on the Time-Off Plan page is selected. For more information, see [Creating a Time-Off Plan](#).
- **Used This Year** — The amount of time-off that has been used as of the current date.
- **Scheduled This Year** — The amount of time-off that has been requested and approved, but not yet taken.
- **Available Now** — Total remaining time-off for the current year.

The **Balances** subtab displays an employee's available balance as of the current date, based on the accruals and carry over rules defined in the time-off plan.

The Balances subtab includes:

- Carried Over — The amount of time-off that has carried over as of the current date.
- Accrued — The amount of time-off that has accrued as of the current date.
- Used — The amount of used time-off.
- Expired Carryover — The amount of time-off that has expired as of the current date.
- Balance — Displays the balance as of the current date based on the amount of time carried over, accrued, used, and any expired carry over.

## Creating a Time-Off Change

You can manually adjust an employee's time-off balance for any of the time-off types that are part of the employee's plan. If needed, you can correct mistakes to time-off balances by either deleting the existing time-off change and submitting a new one, or submitting a new time-off change with the required adjustment.

You cannot create a time-off change for yourself or makes adjustments to your own time-off balance.

 **Note:** To preserve employee data for auditing purposes, employees who have had changes made to their time-off balance cannot be deleted. Instead, these employees should be made inactive.

### To adjust an employee's time-off balance:

1. Go to Setup > HR Information System > Time-Off Change > New.
2. Select the employee and the time-off type that you want to make the adjustments to.
3. In the **Amount** field, enter either a negative or positive value.
4. In the **Amount Specified In** field, specify if this amount is in hours or days.  
 Note that even when days is selected the amount is saved and displayed in hours on the time-off change record. For example, if you enter two days, it appears as 16 hours on the record when the employee's work calendar is set to an eight-hour work day. For more information, see the help topic [Setting Up a Work Calendar](#).
5. Enter the date when you want to apply this change.
6. If required, enter a description.
7. Click **Save**.

To delete a time-off change, go to Setup > HR Information System > Time-Off Change to see the list page of all the time-off change records. Click **Edit** next to the time-off change record you want to delete. Choose Actions > Delete. At the prompt, click **OK** to confirm the action.

## Approving or Rejecting a Time-Off Request as an Administrator

### To approve or reject a time-off request:

1. Go to Setup > HR Information System > Time-Off Request.

2. Select **View** beside the time-off request that you want to approve or reject.
3. To approve the request, click **Approve**.
4. To reject the request, click **Reject**. Optionally, enter a reason for the rejection, and then click **OK**.

## Using Time-Off Management as an Employee or Manager

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

With the NetSuite Time-Off Management feature, you can get approval for time-off before you take it. You can create and submit time-off requests from the Book Time Off button on the Time-Off portlet on the Employee Center home page. The types of time-off and the rules that apply to your time-off plan are based on your company policies, and are set up by your HR administrator. After you submit a time-off request, an email notification is sent to the approver.

**Note:** To use time-off management as an employee or manager, you must use your Employee Center role.

## Submitting Time-Off Requests

### To submit a time-off request:

1. From the home page of your Employee Center, in the **Time-Off** portlet, click **Home**.
2. Click **Book Time-Off**.
3. On the Request Time-Off page, specify the start and end dates for your time-off request.  
You cannot enter time off for days that are not a part of your work week. Non-working days are grayed out and cannot be selected.  
After you specify the date range using the calendar, each day is displayed in chronological order.

### Request Time-Off

Dates\*

to

MON	FEBRUARY 06	
TUE	FEBRUARY 07	Days available accounts for time-off already approved for this year.
WED	FEBRUARY 08	<div>VACATION</div> <div>3.5 days available</div>
THU	FEBRUARY 09	<div>SICK DAY</div> <div>3 days available</div>
FRI	FEBRUARY 10	
MON	FEBRUARY 13	<div>FLEX</div> <div>2 days available</div>

Include a message to help make your case

Requesting 6 days of vacation.

4. For each date in your request, select the type of time off you are requesting. If the time-off type you select has multiple days available, the corresponding date entries in the list are automatically filled for you.

For example, if you select **Vacation** with three days available, the first three days in the list are tagged as vacation days.

You can also use a combination of time-off types for a time-off request. For example, you can specify that you want to use a combination of vacation days and floating holidays.

The displayed days available takes into account time off that has already been approved for the year, but that you have not taken.

If the time-off type is tagged as track only, no time off is accumulated, and your usage is only tracked. For example, if you have no limit to the number of sick days that you can take, the sick day time-off type is tagged as track only.

**Note:** If your company allows you to carry over unused time and you are booking time off for next year, you do not see your carryover balance in the forecasted balance. Your carryover days are calculated at the end of the year to ensure you do not overbook your time off for next year.

- To change a time-off type or to adjust the duration of the time off, click the **Edit** icon beside the entry that you want to change. Make any required changes in the popup window that appears, and click **Done**.

**Request Time-Off**

Dates\*

to

MON	FEBRUARY 06	VACATION	All day	
TUE	FEBRUARY 07	VACATION	All day	
WED	FEBRUARY 08	VACATION	All day	
THU	FEBRUARY 09	VACATION	0.5 day	
FRI	FEBRUARY 10			
MON	FEBRUARY 13			

Type\*

Duration\*

Include a message to help make your case

Requesting 6 days of vacation.

If your request exceeds the days you have available, a warning icon appears beside the request. If your request overlaps with another employee's request, a notification icon appears beside the request. Neither of these icons prevent you from submitting your request. For more information, hover over the icon, and make any necessary changes.

**Wait!**

You are requesting **4 Vacation days** which is more than the **3.5 days** available.

**You might want to change the requested days.** If you're sure, click **Submit**

### Request Time-Off

**Submit**

Dates\*

February 06, 2017

to

February 13, 2017

MON	FEBRUARY 06	VACATION	All day		
TUE	FEBRUARY 07	VACATION	All day		
WED	FEBRUARY 08	VACATION	All day		
THU	FEBRUARY 09	VACATION	All day		
FRI	FEBRUARY 10	FLEX	All day		
MON	FEBRUARY 13	FLEX	All day		

Include a message to help make your case

Requesting 6 days of vacation.

**Wait!**

Some of your co-workers will also be away.

**Jonathan Larson**

From February 6 to February 13, 2017

**Wait!**

You are requesting **4 Vacation days** which is more than the **3.5 days** available. **You might want to change the requested days.** If you're sure, click **Submit**

6. Optionally, you can include a message to your approver.
7. Review the summary box for a breakdown of your request, and then click **Submit**.

A request is sent by email to your approver. To view the status of your time-off request, in the **Time-Off** portlet, click **Requests**. For more information, see [Viewing Time-Off Requests](#).

## Viewing Time-Off Requests

### To view time-off requests:

1. From the home page of your Employee Center, in the **Time-Off** portlet, click **Requests**.
2. To see more time-off requests, in the portlet, click **View All Requests**.
3. On the Time-Off Request page, you can:
  - See the current status of the request, as well as who submitted it, the date range, and the time-off types used for the request.
  - Use the **Filters** section to find a specific time-off request, or view a history of requests for a specific employee, or a specific status. To make multiple selections, hold down the Ctrl key.
  - Click **View** beside a time-off request to see the original request.
4. To export the information, in the header row above the list, click one of the following icons:
  - the CSV Export icon

- the Excel icon
  - the PDF icon
5. To print the list of time-off requests, click the Printer icon.

## Viewing Time-Off Balances

From the Time-Off portlet, you can see a summary of time-off balances, pending requests, and any upcoming booked time-off for yourself, and if you your role has the appropriate permission for your subordinates.

Time-Off			⌂	☰
Home Balances Requests				
		To Be Booked	Scheduled + Used	
PERSONAL		2	0	
VACATION		15	0	
SICK TIME		2		
BEREAVEMENT		0		

**Note:** Your time-off balances are view only and cannot be edited. If you see something that is incorrect, contact your HR administrator.

### To view time-off balances:

1. From the home page of your Employee Center, in the **Time-Off** portlet, click **Balances**.
2. Click **View Balance Details** to see a list of pending requests, upcoming time-off, and past time-off.

## Approving or Rejecting Time-Off Requests

If your role has the appropriate permission, you receive an email notification when you have time-off requests that require approval. Using links in the body of the email, you can directly approve or reject the request.

### To quickly approve or reject a time-off request:

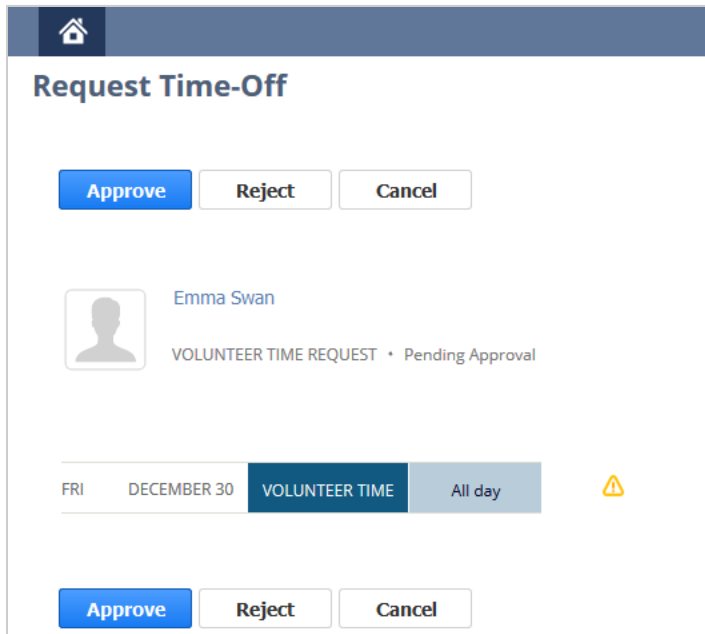

1. Do one of the following:
  - From the home page of your Employee Center, in the **Home Links** portlet, under **Time-Off**, click **Approve Time-Off Requests**.
  - From the email notification, use the links to take action on the request:
    - To approve the request, click **Approve**.
    - To reject the request, click **Reject**. Optionally, enter a reason for the rejection, and then click **OK**.

 **Note:** A rejected request cannot be resubmitted.

### To review details of a specific request before you approve it:

You can view more details of a specific request, such as whether the employee has enough time-off balance for the request, by viewing a detailed summary of the request.

1. From the email notification, click **View Record**.
2. On the Request Time-Off page, review the details of the request.

**Request Time-Off**

**Approve** **Reject** **Cancel**

 **Emma Swan**  
VOLUNTEER TIME REQUEST • Pending Approval

FRI DECEMBER 30 VOLUNTEER TIME All day 

**Approve** **Reject** **Cancel**

 **Tip:** On the Review Time-Off Requests page, if the request exceeds the employee's available days, a warning icon (⚠) appears beside the request. If the request overlaps with another employee's time-off request, a notification icon appears beside the request. For more information, hover over the icon.

3. Click **Approve**, **Reject**, or **Cancel**.

If you click **Reject**, you are prompted to enter a comment, which is sent to the employee.

 **Note:** A rejected request cannot be resubmitted or canceled.

### To view all time-off requests waiting for approval:

1. From the home page of your Employee Center, in the **Home Links** portlet, under **Time-Off**, click **Approve Time-Off Requests**.

✓ **Tip:** On the Review Time-Off Requests page, if the request exceeds the employee's available days, a warning icon (⚠) appears beside the request. If the request overlaps with another employee's time-off request, a notification icon appears beside the request. For more information, hover over the icon.

**Review Time-Off Requests** <sup>6</sup>

 Sandra Meyer VACATION REQUEST	OCTOBER 19 WED to OCTOBER 20 THU 2 days (16 hours)	<a href="#">Approve</a> <a href="#">View Request</a> ✓ Available hours/days ✓ No schedule conflicts
 Jeffrey Matthews Requesting 9 days of vacation. VACATION REQUEST	NOVEMBER 8 TUE to NOVEMBER 18 FRI 9 days (72 hours)	<a href="#">Approve</a> <a href="#">View Request</a> ⚠ Insufficient hours/days ⚠ Possible schedule conflicts
 Sandra Meyer Requesting 8.5 days of vacation VACATION REQUEST	NOVEMBER 8 TUE to NOVEMBER 18 FRI 8.5 days (68 hours)	<a href="#">Approve</a> <a href="#">View Request</a> ✓ Available hours/days ⚠ Possible schedule conflicts
 Jonathan Larson Requesting 2 flex days. FLEX REQUEST	DECEMBER 22 THU to DECEMBER 23 FRI 2 days (16 hours)	<a href="#">Approve</a> <a href="#">View Request</a> ✓ Available hours/days ✓ No schedule conflicts
 Rose Jordan Logging two sick days. SICK DAY REQUEST	OCTOBER 10 MON to OCTOBER 11 TUE 2 days (16 hours)	<a href="#">Approve</a> <a href="#">View Request</a> ✓ Available hours/days ✓ No schedule conflicts

2. Do one of the following:
- To approve a request, click **Approve**.
  - To reject a request, click **View Request**, and then click **Reject**. You are prompted to enter a comment, which is sent to the employee.

**Note:** A rejected request cannot be resubmitted.

## Canceling Time-Off Requests

After you submit a time-off request, you can cancel future dated pending and approved time-off requests.

**Note:** Approved time-off requests that are associated with a locked timesheet cannot be canceled.

### To cancel a time-off request:

1. From the home page of your Employee Center, in the **Time-Off** portlet, click **Requests**.
2. Select the time-off request that you want to cancel.
3. Click **Cancel Request**.

## Time-Off Reports

NetSuite provides the following reporting capabilities for time-off management and time-off tracking, which you can use to retrieve, present, and analyze real-time business results. For more information, see the help topic [Reporting Overview](#).

To find information on NetSuite reports, including how to run each report, search the NetSuite Help Center using the report name.

- [Time-Off Management Reporting](#)
- [Time-Off Management Ad Hoc Reports](#)
- [Time-Off Tracking Reports](#)

## Time-Off Management Reporting

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Time-Off Management feature includes a variety of reporting capabilities that you can use to retrieve, present, and analyze your time-off data. For more information, see [Time-Off Management Reports](#).

If no standard report fits your needs, you can create an ad hoc report. For more information, see [Time-Off Management Ad Hoc Reports](#).

You can also customize these standard reports in the Report Builder by clicking **Customize** on the results page. For more information, see the help topics [Report Builder Interface](#) and [Report Customization](#).

## Time-Off Management Ad Hoc Reports

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

You can use the ad hoc reporting feature to create your own reports to fit the specific needs of your company in relation to time-off management. For an ad hoc report, you can select the type of data you want to report on, the format of the report, and how you want to subtotal and group the information displayed on the report.

Ad hoc reports are available from a New Report link on the Reports Page and Reports tab menu. After you click a New Report link, you choose the data metric to include in your report.

For time-off management, the two available metrics are Available Time-Off and Time-Off Balance Adjustments.

For more information, see the help topics [Ad Hoc Reports](#) and [Choices for Ad Hoc Reports](#).

## Time-Off Tracking Reports

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Time-Off Tracking SuiteApp includes a set of saved searches that you can use as reports. For more information, see [Time-Off Tracking Reports](#).

# Job Management

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Job Management feature enables you to organize your employees according to the jobs that they perform.

There are two features that make up job management:

- Job Management — Enables you to create jobs with job descriptions and assign employees to them. For details, see [Managing Jobs](#).
- Job Requisitions — Enables you to create job requisitions for recruiting, associate them with jobs that you have defined, and track their status through the hiring process. For details, see [Job Requisitions](#).

A job is a description of what work and responsibilities an employee could have. A job can exist in several departments, locations, and subsidiaries. You can assign several employees to one job.

Depending upon the level of complexity your organization requires, you can choose to use the Job Management feature alone, or couple it with Job Requisitions.

Here are some notes highlighting how these features interact:

- The Job Requisitions features requires that the Job Management feature be enabled.
- When you enable the Job Management feature, any job names that exist in the **Job Title** fields on the employees' records are converted to job records. If you later decide to disable the Job Management feature, job names in the job records are converted back to text in the employees' **Job Title** fields.

## Job Management and Job Requisitions Prerequisites

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

## Job Management and Job Requisition Roles and Permissions Requirements

To use the Job Management and Job Requisitions features the following permissions are required:

- The List > Employees permission is required at a minimum level of Edit for both Job Management and Job Requisitions.
- To use Job Management the List > Job Management permission is required at a minimum level of Create.
- To use Job Requisitions the List > Job Requisitions permission is required at a minimum level of Create.

For details about the permission requirements, see [Job Management and Job Requisitions Permission Requirements](#).

The standard roles that come with these permissions are HR Generalist, Administrator, and Chief People Officer (CPO).

You can also create custom roles that include this permission. For more information, see [Customizing or Creating NetSuite Roles](#).

**Note:** If you want more control over what employee information is accessible by different NetSuite users you can use the Advanced Employee Permissions feature. When this feature is enabled, you can use the employee permissions that come with this feature, which give you more control over what employee information certain roles can access. You can also customize employee permission that include all or set of standard fields and sublists from the employee record. For more information, see [Advanced Employee Permissions](#).

## Managing Jobs

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

Job records enable you to store and maintain information about each of the jobs in your organization. A job is a description of what work and responsibilities an employee could have. A job can exist in several departments, locations, and subsidiaries. If you are using the Job Management feature alone, you assign jobs to employees.

## Adding or Editing Jobs

### To add or edit a job:

1. Go to Setup > HR Information System > Jobs > New, or click **New Job** on the Jobs list page. To modify the details of an existing job record, go to Setup > HR Information System > Jobs and click **Edit** next to the name of the job.
2. In the **Title** field, enter a name for the job.
3. In the **Description** field, enter a short unique description for the job.
4. Select the category (**Full-time**, **Part-time**) from the **Employment Category** list.
5. If this is a OneWorld account, select the subsidiary in which this job will exist from the **Subsidiary** list.
6. If you want this job to be inactive, check the **Job is Inactive** box. This affects how the job appears on the Jobs list.
7. Click **Save**.

**Note:** The Job ID is a read-only field generated by NetSuite when the job record is created.

### To view the list of jobs:

1. Go to Setup > HR Information System > Jobs.
2. To see all inactive job records, check the **Show Inactives** box.

3. To view an individual job record, click **View** beside the job.

### To delete a job:

1. Go to Setup > HR Information System > Jobs.
2. Click **Edit** beside the job you want to delete.
3. Select **Delete** from the **Actions** menu.
4. When prompted to confirm the deletion, click **OK**.

When you attempt to delete a job with one or more employees assigned to it you are redirected to the dependent records page, which lists all the employees currently assigned to the job. Each employee must be unassigned from the job before it can be deleted.

## Assigning Employees to Jobs

If you are using the Job Management feature, you can assign employees to jobs. A job is a description of what work and responsibilities an employee could have. A job can exist in several departments, locations, and subsidiaries.

### To assign an employee to a job:

1. Go to Lists > Employees > Employees.
2. Click **Edit** beside the employee you want to assign a job to.
3. Select a job from the **Job** list found in the primary information section of the employee record page.
4. If you are using both the Job Management and Position Management features, click the **Human Resources** > **Job** subtab, select **Job** under Work Assignment, and select a job from the **Job** list. To create a new job from this page, click **New**. For more information about creating a job, see [Adding or Editing Jobs](#).

**Note:** When an employee is assigned a job you can directly access the associated record by clicking the **Job Title** field from the employee record.

5. Click **Save**.

## Job Requisitions

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

If you are using the Job Management feature, you can also enable the Job Requisition feature to create job requisitions and associate them with jobs.

### To create a job requisition:

1. Go to Setup > HR Information System > Job Requisitions > New, or click **New Job Requisition** on the Job Requisition list page. To modify the details of an existing job requisition, go to Setup > HR Information System > Job Requisition, and click **Edit** beside the name of the job requisition.
2. Select the job associated with this job requisition from the **Job** list. The **Title**, **Job Description**, and **Posting Description** fields are populated from the job description for the selected job. The

**Job Description** field is read-only, but you can edit the **Title** and the **Posting Description**. The **Posting Description** is the description used for external job postings.

 **Note:** The **Posting Description** is the description used for external job postings.

3. Select a status for the job requisition from the **Status** list: **Pending Approval**, **Draft**, **On-Hold**, **Open**, **Closed**, or **Filled**.
4. In the **Headcount** field, enter the number of employees you need in order to fill this job requisition.
5. Select whether the job requisition posting is internal, external, or both from the **Posting Type** list.
6. If you have a OneWorld account, select the **Subsidiary** from the list.
7. Select the **Department**, **Location**, and **Class** for the job requisition from the lists.
8. Select the date when this job requisition becomes open from the **Open Date** field.
9. Select the date when this job requisition expires from the **Close Date** field. This must be after the open date.
10. Select the anticipated target date by which this job requisition should be filled from the **Target Hire Date** field. This date must either be between the open date and close date, or on either of these dates.
11. Select the appropriate employees from the **Hiring Manager**, **Recruiter**, and **Approved By** lists.
12. If you want this job requisition to be inactive, check the **Inactive** box. This affects how the job requisition appears on the Job Requisition list.
13. Click **Save**.

#### To view the list of job requisitions:

1. Go to Setup > HR Information System > Job Requisitions.
2. To see all inactive job requisitions, check the **Show Inactives** box.
3. To view an individual job requisition record, click **View** beside the job.

#### To delete a job requisition:

1. Go to Setup > HR Information System > Job Requisitions.
2. Click **Edit** beside the job requisition you want to delete.
3. Select **Delete** from the Actions menu.
4. When prompted to complete the deletion, click **OK**.

To access job requisition saved searches, see [Recruiting Reports](#).

# Advanced Employee Permissions

- [Before Enabling the Advanced Employee Permissions Feature](#)
- [Advanced Employee Permissions Overview](#)
- [Setting Employee Access for Advanced Employee Permissions](#)
- [Creating Custom Advanced Employee Permissions](#)

## Before Enabling the Advanced Employee Permissions Feature

NetSuite recommends you read the following topics before you enable the Advanced Employee Permissions feature.

- [Advanced Employee Permissions Best Practices](#)
- [How Advanced Employee Permissions Interacts with Effective Dating](#)

## Advanced Employee Permissions Best Practices

This section describes how to access the NetSuite employee record in different contexts when the Advanced Employee Permissions feature is enabled. It also outlines best practices for working with employee data in different contexts when this feature is enabled.

### Script Access

The following section outlines how script access changes when the Advanced Employee Permissions features is enabled.

- The fields and sublists a user has access to can change depending on which employee record is being viewed or edited. This is different from other records in NetSuite, where permissions granted to a role determine what the role can see for every instance of that record.

In general, scripts should always check to see if a field or sublist exists before trying to do something with it. Simply calling functions and methods that interact with fields and sublists before checking whether they are there may result in inconsistent behavior.

For example, the **Department** field is permitted on the employee record. When you check to see if this field exists and you do not have access, a null value is returned, and if the field is empty, an empty string is returned.

- When you run the following script, errors are generated because it does not check whether the field exists or whether you have access to the field.

```
var employeeRecord = nlapiLoadRecord('employee', '115');
employeeRecord.setFieldValue('department', '2');
nlapiSubmitRecord(employeeRecord);
```

- To check if your role has access to a field for a specific employee, load the employee record object and call `getAllFields().includes()`. If the field exists and you do have access, a `true` value is returned.

In the following example, the user has access to the **Department** field for the employee with ID:115.

```
var accessToDepartment = nlapiLoadRecord('employee', '115').includes('department');
```

- Taking the previous two script examples into consideration, you should use the following example to make sure your scripts do not fail.

```
var accessToDepartment = nlapiLoadRecord('employee', '115').getAllFields().includes('department');
var employeeRecord = nlapiLoadRecord('employee', '115');
if (accessToDepartment)
{
    employeeRecord.setFieldValue('department', '2');
}
nlapiSubmitRecord(employeeRecord);
```

- The search columns available to a user are also dependent on the permissions assigned to the role.

## Working with Scripts and Workflows

- If you have any scripts or workflows that add buttons to the employee record, make sure that they appear only when appropriate. Scripts should be configured so that the action being added respects the restrictions on the employee record.
- In NetSuite, account administrators have access to all data for all record types, including the employee record. This can create issues in the following situations:
  - When a user is assigned a role that has permission to create scripts or workflows.
  - When a user sets a script or workflow to run as administrator.

A user could write or deploy a script or workflow that gains access to employee data that they would normally not be able to access. This could potentially be used to compromise employee data. When the Advanced Employee Permissions feature is enabled, NetSuite recommends that you carefully track which roles have permission to create or alter scripts and workflows. In addition, track which scripts and workflows execute as administrator, and what they do to make sure employee data is not unintentionally leaked.

- Assigning any of the Advanced Employee Permissions to a role gives partial access to the employee record. Some scripts (including third-party scripts) may fail when they attempt to access parts of the employee record that they are not permitted to access, with the role they are assigned. If needed, consider running these scripts as administrator, or revise the scripts to handle cases where some fields and sublists are not accessible.
- It is not possible to know what fields or sublists are present on any employee record when the Advanced Employee Permissions feature is enabled. This means that workflows cannot safely perform operations, such as setting a default value on a field. To avoid this, utilize an after submit workflow as administrator, which gives access to the complete set of fields and sublists on the employee record.

For best practices for using the Advanced Employee Permissions feature with SuiteScript, see the help topics [Suitelets and UI Object Best Practices](#) and [Client Script Best Practices](#).

## Employee Searches

Before you enable the Advanced Employee Permissions feature, review existing saved employee searches and make sure that the audience for these searches is set up properly.

## NetSuite Reports

Use caution when you give access to reports, as data in NetSuite reports is not governed by the Advanced Employee Permissions feature. This means that it could be possible to accidentally disclose more information than an employee should have access to through a report. For details, see the help topic [Access to Reports](#).

## SuiteAnalytics Connect

SuiteAnalytics Connect access to the employee record, meaning access through ODBC, JDBC, or ADO.NET drivers, is only supported with the Employees permission. SuiteAnalytics Connect access is not supported for users with other permission levels to the employee record.

## Creating Custom Roles

Roles with the SuiteScript permission can configure scripts to run as administrator, which bypasses the Advanced Employee Permissions feature. Before creating custom roles with the SuiteScript permission, make sure that the role should have access to the information that is being exposed.

## SuiteTalk

Access to the employee record through SuiteTalk respects the permissions that are assigned to a role. However, be aware of the following:

- If you try to set a value for a field on the employee record in a web services program and the current role does not have access to that field, your program completes without errors, but the field is not set or updated.
- For web services in accounts with the Advanced Employee Permissions feature enabled, fields and sublists that the current role does not have access to are not returned through search or filtering. Also, edits made to these fields or sublists are ignored.

## How Advanced Employee Permissions Interacts with Effective Dating

The following permission requirements are required when you use the Effective Dating feature with the Advanced Employee Permissions feature enabled.

- To view effective dating changes, a role must be assigned the Effective Dating permission, as well as the Employees, Employee Confidential or Employee Administration permission.
- By default, only the Effective Dating permission gives access to the effective dating logs and the employee change search. However, you can customize any of the employee permissions to include effective dating logs. Users assigned to this customized employee permission see only what they are permitted to see based on the permission assigned to their role. For example, roles with the Employee Confidential permission see effective dating logs only for their direct reports and below.
- When the Effective Dating feature is enabled, inline editing is disabled.

For more information about the Effective Dating feature, see [Effective Dating for Employee Information](#).

## Advanced Employee Permissions Overview

The Advanced Employee Permissions feature gives administrators more flexibility and control over which fields and sublists on the employee record are available to the role based on the specific

employee permissions assigned to the role. This feature includes four different permissions: Employee Self, Employee Public, Employee Confidential, and Employee Administration. Each of these permissions has its own built-in restrictions.

## What happens when you enable the Advanced Employee Permissions Feature?

- The Employee Self permission is automatically added to the Employee Center role when the Advanced Employee Permissions feature is enabled. This means that employees with this role can access relevant information about themselves from their Employee Center. For details, see [Employee Self Permission Overview](#).
- The Employee Public permission is automatically added to a set of standard NetSuite roles. When the Advanced Employee Permissions feature is enabled, employees with this permission have access to basic employee information, such as job title, for all active/non-terminated employees. For details, see [Employee Public Permission Overview](#).
- The Employee Confidential permission is automatically added to a set of standard NetSuite roles. When the Advanced Employee Permissions feature is enabled, employees with this permission have access to a set of fields and sublists, such as the **Billing Class** field and the **Time-Off** subtab for their direct reports, and below. For details, see [Employee Confidential Permission Overview](#).
- The Employee Administration permission is not automatically assigned to any roles when the Advanced Employee Permissions feature is enabled. For more information about this permission, see [Employee Administration Permission Overview](#).

With this feature, you can customize employee permissions to include all or a set of standard fields and sublists from the employee record. For more information, see [Creating Custom Advanced Employee Permissions](#).

You can also create and add customized fields and sublists to customized employee permissions. For details, see [Creating Custom Fields for Advanced Employee Permissions](#) and [Creating Custom Sublists for Advanced Employee Permissions](#).

 **Note:** When the Advanced Employee Permissions feature is enabled, the **Show Employees as Contacts** field on the General Preferences page is not available.

## How Advanced Employee Permissions Interacts with Other NetSuite Features

### Advanced Employee Permissions and Effective Dating

The following permission requirements are required when you use the Effective Dating feature with the Advanced Employee Permissions feature enabled.

- To view effective dating changes, a role must be assigned the Effective Dating permission, as well as the standard or any customized version of the Employees, Employee Confidential or Employee Administration permissions.
- By default, only the Effective Dating permission gives access to the effective dating logs and the employee change search. However, you can customize any of the employee permissions to include effective dating logs. Users assigned to this customized employee permission see only what they are permitted to see based on the permission assigned to their role. For example, roles with the Employee Confidential permission see effective dating logs only for their direct reports and below.
- When the Effective Dating feature is enabled, inline editing is disabled.

For more information about the Effective Dating feature, see [Effective Dating for Employee Information](#).

## Advanced Employee Permissions and Standard NetSuite Roles

The following table outlines the standard NetSuite roles that are automatically assigned with existing employee permissions, and highlights which roles are assigned the employee permissions introduced by the Advanced Employee Permissions feature. Also listed are the default access levels for each permission. If you change the access level of the Employee Public, Employee Confidential, and Employee Administration permissions to level Edit, be aware that this will give users the ability to also create employees in NetSuite. For more information, see the help topic [Access Levels for Permissions](#).

Note that the existing Employees permission gives access to all the information on the employee record. This permission is intended for Human Resources Business Partners, Chief People Officers (CPO), and Human Resources Directors. For more information, see the help topic [Permissions and Restrictions](#). To restrict these roles to see only employee administration information, remove the Employees permission and add the Employee Administration permission. For details, see [Employee Administration Permission Overview](#).

The Employee Administration permission is not automatically assigned to standard roles when the feature is enabled.

**Important:** By default, when the Advanced Employee Permissions feature is enabled, any customizations created with NetSuite SuiteBuilder that are included with the standard Employees permission are preserved. However, customizations are not preserved when the Employees permission is customized. If required, customizations need to be manually added to the customized Employees permission. For more information, see [Creating Custom Advanced Employee Permissions](#).

**Note:** Customized roles that are already assigned to users must be updated to reflect the permissions associated with the Advanced Employee Permissions feature. If you add permissions to an existing role when a user is currently logged in to NetSuite, that user must log out and log back in to NetSuite to see the newly assigned role.

Standard Role	Assigned Employee Permissions — Level of Access
A/P Clerk	<ul style="list-style-type: none"> <li>Employee Public — View</li> <li>Employee Record — View</li> </ul>
A/R Clerk	<ul style="list-style-type: none"> <li>Employee Public — View</li> <li>Employee Record — View</li> </ul>

## Employee Self Permission Overview

The Employee Self permission is intended for all employees. Users assigned with a role that has this permission can see relevant information about themselves in the Employee Center. When the Advanced Employee Permissions feature is enabled, the Employee Self permission is automatically added to the Employee Center role, at access level View. For details, see [Advanced Employee Permissions and Standard NetSuite Roles](#).

## Employee Self Permission Fields and Sublists

Users assigned with a role that has the Employee Self permission can view the following fields and sublists for themselves from the Employee Center. Users are not able to view or edit future or past dated changes to their employee information when assigned with a role that has this permission. For information on how this permission works when combined with other permissions, see [Setting Employee Access for Advanced Employee Permissions](#).

Employee Self Permission Fields	Employee Self Permission Sublists
<ul style="list-style-type: none"> <li>Primary Information <ul style="list-style-type: none"> <li>Image</li> <li>Name</li> <li>Mr/Ms</li> <li>Initials</li> <li>Supervisor</li> <li>Job Title</li> </ul> </li> <li>Email, Phone, Address <ul style="list-style-type: none"> <li>Email</li> <li>Phone</li> <li>Office Phone</li> <li>Mobile Phone</li> <li>Home Phone</li> <li>Fax</li> <li>Address</li> </ul> </li> <li>Classification <ul style="list-style-type: none"> <li>Class</li> <li>Department</li> <li>Location</li> <li>Subsidiary</li> </ul> </li> <li>Government-Issued ID <ul style="list-style-type: none"> <li>Passport Number</li> <li>Driver's License Number</li> <li>Other Government-Issued IDs</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>Address <ul style="list-style-type: none"> <li>Default Shipping</li> <li>Home</li> <li>Label</li> <li>Address</li> </ul> </li> <li>Human Resources <ul style="list-style-type: none"> <li>SSN</li> <li>Birth Date</li> <li>Job Description</li> <li>Job <ul style="list-style-type: none"> <li>Job ID</li> <li>Employment Category</li> <li>Job</li> </ul> </li> <li>Subordinates <ul style="list-style-type: none"> <li>Image</li> <li>Name</li> <li>Job Title</li> <li>Location</li> <li>Department</li> <li>Subsidiary</li> <li>Contact Info</li> </ul> </li> <li>Education <ul style="list-style-type: none"> <li>Level of Education</li> <li>Degree</li> <li>Date Conferred</li> </ul> </li> <li>Personal <ul style="list-style-type: none"> <li>Marital Status</li> </ul> </li> </ul> </li> </ul>

## Employee Public Permission Overview

The Employee Public permission is intended for all employees. Users assigned with a role that has this permission can view basic employee information for all active, non-terminated employees. Basic information includes non-sensitive information, such as job title, and reporting relationships. When the Advanced Employee Permissions feature is enabled, the Employee Public permission is automatically added to a set of internal standard NetSuite roles, including the Employee Center role, at access level View. For more information, see [Advanced Employee Permissions and Standard NetSuite Roles](#). If you change the default access level of the Employee Public permission to Edit, be aware that this will give users the ability to also create employees in NetSuite. For more information, see the help topic [Access Levels for Permissions](#).

## Employee Public Permission Fields and Sublists

Users assigned with a role that has the Employee Public permission have access to the following fields and sublists for any active, non-terminated employee. For information on how this permission works when combined with other permissions, see [Setting Employee Access for Advanced Employee Permissions](#).

Employee Public Permission Fields	Employee Public Permission Sublists
<ul style="list-style-type: none"> <li>■ Primary Information <ul style="list-style-type: none"> <li>□ Employee ID</li> <li>□ Initials</li> <li>□ Supervisor</li> <li>□ Name</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>■ Subordinates <ul style="list-style-type: none"> <li>□ Image</li> <li>□ Name</li> <li>□ Job Title</li> <li>□ Location</li> </ul> </li> </ul>

Employee Public Permission Fields	Employee Public Permission Sublists
<ul style="list-style-type: none"> <li>□ Job Title</li> <li>□ Image</li> <li>■ <b>Email, Phone, Address</b> <ul style="list-style-type: none"> <li>□ Email</li> <li>□ Phone</li> <li>□ Office Phone</li> <li>□ Fax</li> <li>□ Mobile Phone</li> </ul> </li> <li>■ <b>Classification</b> <ul style="list-style-type: none"> <li>□ Location</li> <li>□ Department</li> <li>□ Subsidiary</li> <li>□ Class</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>□ Department</li> <li>□ Subsidiary</li> <li>□ Contact Info</li> </ul>

## Employee Confidential Permission Overview

The Employee Confidential permission is intended for manager roles. User assigned with a role that has this permission have access to employee public and confidential information for their direct reports and below.

When the Advanced Employee Permissions feature is enabled, the Employee Confidential permission is automatically added to a set of internal standard NetSuite roles, including the Employee Center role, at access level View. For more information, see [Advanced Employee Permissions and Standard NetSuite Roles](#). If you change the default access level of the Employee Confidential permission to Edit, be aware that this will give users the ability to also create employees in NetSuite. For more information, see the help topic [Access Levels for Permissions](#).

## Employee Confidential Permission Fields and Sublists

In addition to the employee public fields and sublists, users assigned with a role that has the Employee Confidential permission have access to the following fields and sublists for their direct reports, and below. For information on how this permission works when combined with other permissions, see [Setting Employee Access for Advanced Employee Permissions](#).

Employee Confidential Permission Fields	Employee Confidential Permission Sublists
<ul style="list-style-type: none"> <li>■ <b>Classification</b> <ul style="list-style-type: none"> <li>□ Billing Class</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>■ <b>Human Resources</b> <ul style="list-style-type: none"> <li>□ Job Information <ul style="list-style-type: none"> <li>■ Type</li> <li>■ Employee Status</li> <li>■ Employee FTE Status</li> <li>■ Job Description</li> <li>■ Sales Rep</li> <li>■ Support Rep</li> <li>■ Project Resource</li> <li>■ Default Project Resource Role</li> <li>■ Work Calendar</li> <li>■ Labor Cost</li> </ul> </li> </ul> </li> </ul>

## Employee Administration Permission Overview

The Employee Administration permission is intended for HR Generalists and HR Administrators. Users assigned with a role that has this permission have access to a limited set of fields and sublists based on the class, department, location, or (with NetSuite OneWorld) subsidiary they are responsible for. For example, roles with this permission can view HR related fields, such as job and personal information.

## Employee Administration Permission Fields and Sublists

In addition to the employee public fields and sublists, users assigned with a role that has the Employee Administration permission have access to the following fields and sublists for employees that match the restrictions defined on the Role page. For information on how this permission works when combined with other permissions, see [Setting Employee Access for Advanced Employee Permissions](#).

 **Note:** The Employee Administration permission is not automatically assigned to standard roles when the feature is enabled.

Employee Administration Permission Fields	Employee Administration Permission Sublists
<ul style="list-style-type: none"> <li>Primary Information <ul style="list-style-type: none"> <li>Mr/Ms</li> <li>Notes</li> </ul> </li> <li>Email, Phone, Address <ul style="list-style-type: none"> <li>Address</li> <li>Home Phone</li> </ul> </li> <li>Classification <ul style="list-style-type: none"> <li>Billing Class</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>Communication</li> <li>Address <ul style="list-style-type: none"> <li>Default Shipping</li> <li>Home</li> <li>Label</li> <li>Address</li> <li>Edit</li> </ul> </li> <li>Human Resources <ul style="list-style-type: none"> <li>SSN</li> <li>Birth Date</li> <li>Passport Number</li> <li>Driver's License Number</li> <li>Job Information <ul style="list-style-type: none"> <li>Type</li> <li>Employee Status</li> <li>Employee FTE Status</li> <li>Job Description</li> <li>Sales Rep</li> <li>Project Resource</li> <li>Default Project Resource Role</li> <li>Work Calendar</li> <li>Labor Cost</li> <li>Hourly Rate</li> <li>Hire Date</li> <li>Last Review Date</li> </ul> </li> </ul> </li> </ul>

## Advanced Employee Permissions Use Cases

The following section provides examples of how employee permissions can be used for specific types of employees, and what information is accessible when the permissions are combined. The combination of permissions exposes only the information that the particular type of employee requires access to.

For a complete list of the fields and sublists exposed with each permission, see the following help topics:

- [Employee Self Permission Overview](#)
- [Employee Public Permission Overview](#)
- [Employee Confidential Permission Overview](#)
- [Employee Administration Permission Overview](#)

**Note:** If you assign an additional role to a user who is currently logged in to NetSuite, that user must log out and log back in to see the newly assigned role. The same is true if you add permissions to an existing role while a user is currently logged in to NetSuite. The user needs to log out and log back in to exercise the new permissions.

## All Employees

For all employees, assign them to a role that has the Employee Self and Employee Public permissions at access level View.

With this combination of permissions, employees can do the following:

- View relevant information about themselves on their employee record.
- View and search basic employee information, such as email address and supervisor, for all active, non-terminated employees.

**Note:** Include the Employee Record permission to allow employees to search for employees and to see employee menus, for example List > Employees.

## Managers

For managers, assign them to a role that has the Employee Self, Employee Public, and Employee Confidential permissions at access level View.

With this combination of permissions, managers can do the following:

- View relevant information about themselves on their employee record.
- View and search basic employee information, such as email address and supervisor, for all active, non-terminated employees.
- View and search confidential employee information, such as hire date and expense limit, for direct reports and below.

**Note:** Include the Employee Record permission to allow managers to search for employees and to see employee menus, for example List > Employees.

## HR Generalists

For HR Generalists, assign them to a role that has the Employee Public and Employee Confidential permissions at access level View, and the Employee Administration permission at access level Full.

With this combination of permissions, HR Generalists can do the following:

- View and search basic employee information, such as email address and supervisor, for all active, non-terminated employees.

- View and search confidential employee information, such as hire date and expense limit, for direct reports and below.
- View, create, edit, and search personal information, such as home phone and marital status, for employees who match the restriction policy defined on the Role page. If no restrictions are defined, this information is available for all employees.

**Note:** Include the Employee Record permission to allow HR Generalists to search for employees and to see employee menus, for example List > Employees.

## HR Director and Above

For HR directors and above, assign them to a role that has the Employee Public permission at access level View and the Employees permissions at access level Full.

With this combination of permissions, HR directors and above can do the following:

- View and search basic employee information, such as email address and supervisor, for all active, non-terminated employees.
- View, search, edit, and create employee record information for all employees who match the restriction policy defined on the Role page. For example, if a location restriction is set, access is given to employees only in the location or sublocation who are direct reports. If no restrictions are defined, access is given to all the information on every employee record.

**Note:** Include the Employee Record permission to allow HR directors to search for employees and to see employee menus, for example List > Employees.

## Setting Employee Access for Advanced Employee Permissions

Additional levels of restrictions and access to employee information can be specified on the Employee Access subtab of the Role page.

### To set employee access:

1. Go to Setup > Users/Roles > Manage Roles.
2. From the list, click **Customize** or **Edit** beside the role you want to assign custom employee access to.
3. Click the **Employee Access** subtab.
4. From the **Permission** list, select the employee access want to add to the role. When you choose a permission, the restrictions are automatically selected. Choose one of the following options:
  - **Employee Administration** — Uses the restrictions defined on the Role page.
  - **Employee Confidential** — Restricts access to directs reports and below.
  - **Employee Public** — Restricts access to active, non-terminated employees.
  - **Employee Self** — Restricts access to self.
5. From the **Level** column, set the level of access for the permission. For more information about access levels, see the help topic [Access Levels for Permissions](#).
6. Click **Add**.

7. Repeat these steps for each permission you want to assign to the role. When two employee permissions are included with a role, one at level view and another at level edit, users assigned the role see a combination of the fields and sublists they are permitted to view on the employee record. In edit mode, only the fields and sublists that the user can edit are visible on the employee record.
8. Click **Save**.

For custom permissions created from a built-in permission, the restrictions from the standard permission are used. If you create a brand new custom permission, the restrictions are specified on the Role page.

**Note:** If you assign an additional role to a user who is currently logged in to NetSuite, that user must log out and log back in to see the newly assigned role. The same is true if you add permissions to an existing role while a user is currently logged in to NetSuite. The user needs to log out and log back in to exercise the new permissions.

## Creating Custom Advanced Employee Permissions

When the Advanced Employee Permissions feature is enabled, administrators can create custom employee permissions that include all or a set of standard or custom fields and sublists from the employee record.

Either a new permission can be created using a custom set of fields and sublists from the employee record, or an existing employee permission can be customized to include a subset of the fields and sublists they expose.

Standard employee permissions cannot be modified, so it is recommended that you use these permissions as templates to create your own customized employee permissions. You can then assign your customized employee permissions to roles in your account. New employee permissions inherit the role restrictions of the parent permission.

When customizing a standard employee permission, keep in mind that the Employee Self, Employee Public, and Employee Confidential permissions have hard-coded restrictions that cannot be modified.

For example, if you create a custom permission using the Employee Public permission, the restriction to view basic employee information for only active, non-terminated employees is maintained. You can change what information can be viewed, created, edited, or deleted, but the restriction remains the same. For more information, see [Setting Employee Access for Advanced Employee Permissions](#).

## Before Creating Custom Advanced Employee Permissions

- By default, when the Advanced Employee Permissions feature is enabled, any customizations created with NetSuite SuiteBuilder that are included with the standard Employees permission are preserved. However, customizations are not preserved when the Employees permission is customized. If required, customizations need to be manually added to the customized Employees permission.
- When customizing employee permissions, be aware that some fields on the employee record have dependencies on other fields, and should not be added or removed individually.
- Both inline editing and inactivating employees from the Employees List page are disabled for users assigned to a role that has a custom Advanced Employee Permission.

- Before deploying client or server side scripts that gain access to employee data make sure:
  - The employee field or sublist is available to the role.
  - The role has the correct employee permission to see the employee field or sublist for the types of employees being viewed or edited.
  - Some scripts (including third-party scripts) may fail if they attempt to access parts of the employee record that they are not permitted to access, with the role and permission they are assigned. For more information, see [Advanced Employee Permissions Best Practices](#).

### To create a custom Advanced Employee Permission:

1. Go to Setup > Users/Roles > Manage Permissions.
2. From the Manage Permissions page, choose how you want to create the custom employee permission.
  - a. To create a customized employee permission that is based off a standard employee permission, beside the standard employee permission you want to customize, click **Customize**. This type of custom permission inherits all of the standard fields and sublists associated with the parent permission. You can make changes as necessary.
  - b. To create a new employee permission that does not start with a list of associated fields and sublists, select **New Permission** from the Manage Permissions page.
3. To add a standard field, do the following:
  - a. Select the Fields > Standard Fields subtab.
  - b. Click a line in the list.
  - c. Click **Insert**.
  - d. From the **Record Type** list, select **Employee**.
  - e. From the **Field** list, select the field to add to the permission.
  - f. Click **Add**.

Alternatively, click **+Add Row**, select the employee record and field, and click **Add**. To remove a field, select it from the list, and click **Remove**.

You can also create custom fields and add them to the employee permission from the Fields > Custom Fields subtab. For details, see [Creating Custom Fields for Advanced Employee Permissions](#).

4. To add a standard sublist, do the following:
  - a. Select the Sublists > Standard Sublists subtab.
  - b. Click a line in the list.
  - c. Click **Insert**.
  - d. From the **Record Type** list, select **Employee**.
  - e. From the **Sublist** list, select the sublist to add to the permission.
  - f. Click **Add**.

Alternatively, click **+Add Row**, select the employee record and sublist, and click **Add**. To remove a sublist, select it from the list, and click **Remove**.

You can also create custom sublists and add them to the employee permission from the Sublists > Custom Sublists subtab. For details, see [Creating Custom Sublists for Advanced Employee Permissions](#).

5. Repeat these steps for each field and sublist that you want to include or exclude for this employee permission.
6. Click **Save**.

**Important:** When you add sublists to a custom permission that are associated with another feature in NetSuite, the specific permission for the feature also needs to be added to the role when you add the customized permission. If the role does not have the required permission for the feature they will not see any data in the sublists. For example, the Accrued Time and Available Now sublists are associated with the Time-Off Management feature. If you add these sublists to a custom employee permission you need to make sure that the Time-Off Administration permission is included when you add the custom permission to the role. For more information on feature permission requirements, see [SuitePeople Permission Requirements](#) and For more information, see the help topic [Permissions Documentation](#).

### To edit custom employee permissions:

1. Go to Setup > Users/Roles > Manage Permissions.
2. Click **Edit** next to the permission you want to change.
3. On the Permission page, make any desired changes.
4. Click **Save**. Any changes that are made to custom employee permissions that are assigned to users are automatically applied.

To remove the permission, click **Actions > Delete**.

## Creating Custom Fields for Advanced Employee Permissions

**Important:** Permission access levels are defined on the Role page and not on the custom entity record. The access level is set when the employee permission is assigned to the role.

For example, if the Employee Confidential permission is assigned to a role at access level View, any custom fields that are added to the permission respect that access level. For more information, see [Creating Custom Advanced Employee Permissions](#).

### To create a custom field:

1. Go to Customization > Lists,Records, & Fields > Entity Fields > New.
2. In the **Label** field, enter a name or description for the field. You can enter up to 200 characters for the label.  
  
For information about the other fields on the custom entity record, see the existing help topic [Custom Entity Fields](#).
3. From the **Applies To** subtab, check the **Employee** box.
4. Click the **Employee Access** subtab.
5. From the **Permission** list, select the custom permission that you want to associate this custom field with, and click **Add**.
6. Repeat these steps for each custom permission you want to associate this custom field with.
7. Click **Save**.

The custom field you created is automatically added to the custom permission. You can see the list of custom fields associated with the permission from the Fields > Custom Fields subtab on the Permission page. For details, see [Creating Custom Advanced Employee Permissions](#).

If you later want to inactivate the field, check the **Inactive** box. For more information, see the help topic [Inactivating a Custom Field](#).

## Creating Custom Sublists for Advanced Employee Permissions

**Important:** Permission access levels are defined on the Role page. The access level is set when the employee permission is assigned to the role.

For example, if the Employee Confidential permission is assigned to a role at access level View, any custom sublists that are added to the permission respect that access level. For more information, see [Creating Custom Advanced Employee Permissions](#).

### To create a custom sublist:

1. Go to Customization > Forms > Sublists.
2. Select the **Entity** subtab.
3. In the **Search** field, select the saved search that returns the results you want to appear on the record. If the saved search does not appear in the list, check the saved search settings. The first item listed on the Available Filters subtab must be a List/Record type. Otherwise the saved search is not available to assign as a sublist.
4. In the **Label** field, enter a label for this sublist.
5. In the **Tab** column, select the subtab where you want the sublist to appear.
6. Click **Save**.

The custom sublist you created automatically appears in the **Custom Sublists** subtab on the Permission page.

### To add a custom sublist:

1. Go to Setup > Users/Roles > Manage Permissions.
2. Click **Customize** or **Edit** beside the permission you want to add a custom sublist to.
3. Click the **Sublists** > **Custom Sublists** subtabs.
4. From the **Record Type** list, select **Employee**.
5. From the **Sublist** list, select the custom sublist to add to the permission.
6. Click **Add**.
7. Repeat these steps for each custom sublist you want to add to the permission.
8. Click **Save**.

# Time Tracking

- [Managing Time Tracking](#)
- [Timesheets](#)

## Managing Time Tracking

A user with the Enable Features permission can enable the Time Tracking feature at Setup > Company > Enable Features, on the Employees subtab. This feature enables employees with access to time tracking to record the hours they work.

**Note:** If you currently use the Timesheets feature, see [Timesheets](#) for additional information.

If you are migrating your time features from Timesheets to Time Tracking, the conversion process can take some time depending on the number of time entries and customizations to be converted. When enabling Time Tracking from Timesheets, administrators will receive an email notification that the process has begun. The message will include a link to a status page that details the progress of the migration.

Users of products other than NetSuite CRM+ can record time for payroll items and billable time. Recording billable time enables the invoicing of customers for these hours.

**Warning:** NetSuite CRM+ users cannot record billable time, invoice customers for billable time, or record time for payroll items.

For information about time tracking, see the following:

- [Understanding Time Tracking](#)
- [Setting Up Time Tracking Preferences](#)
- [Giving an Employee Access to Time Tracking](#)
- [Entering a Time Transaction](#)
- [Using Weekly Time Tracking](#)
- [Using the Timer to Track Time](#)
- [Calculating Total Time Worked](#)
- [Entering Time for a Payroll Item](#)
- [Adding a Custom Field to Time Tracking Pages](#)
- [Approving or Rejecting a Time Transaction](#)

## Understanding Time Tracking

Use time tracking to record the hours worked by employees.

You can record billable hours and invoice your customers for them. If you use Projects or Project Management, you can also record how many hours are spent on each project and use time reports to plan for future projects and hiring needs. For more information on Time Tracking and Projects, see the help topic [Using Project Management](#), [Working with Resources in Project Management](#), and [Managing Time and Expenses for Project Resources](#).

With the appropriate role access, you can track time for employee payroll items like hourly wages. Employees who have the Restrict Time and Expenses box checked and the Track Time permission

enabled can enter time for themselves using their default roles. This eliminates the need for them to change to the Employee Center role to track their time. For more information, see the topics under [NetSuite Users & Roles](#).

**Warning:** NetSuite CRM+ users cannot record billable time, invoice customers for billable time, or record time for payroll items.

If your role has the Track Time permission, customer records include a Time Tracking subtab that shows associated time records and enables you to enter new ones. If you use Projects or Project Management, project records also include a Time Tracking subtab.

A user with the Enable Features permission must enable the Time Tracking feature at Setup > Company > Enable Features, on the Employees subtab.

To set preferences for tracking time, go to Setup > Accounting > Preferences > Accounting Preferences and click the Time & Expenses subtab. For more information, see [Setting Up Time Tracking Preferences](#).

**Note:** If you use NetSuite OneWorld, the **Intercompany Time and Expense** feature and the related **Intercompany Time** accounting preference affect users' ability to enter time worked for customers or projects with subsidiaries other than their own. If the feature is not enabled, or if the preference is set to **Disallow**, users cannot enter intercompany time transactions. Instead, they can only select customers or projects with the same subsidiary to which they are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

## Time Thresholds

You can set time thresholds for your employees to limit how they enter time. Time threshold preferences enables you to specify the minimum and maximum number of hours permitted per day and week. You can set one or all of these preferences to limit the number of hours permitted to be tracked on a weekly basis. You can opt to set the limits manually, or you can have the limits set automatically based on the work calendar. You can also choose to permit time transactions to be submitted outside the limits you set.

**Note:** Time thresholds are not available when using SuiteScript, SuiteFlow, or custom approval routing.

Daily time threshold preferences account for holidays and non-working days based on the selected work calendar. NetSuite does not verify non-working days, holidays, or entries on a timesheet that have not yet been filled.

For employees without a selected work calendar, time thresholds use the system default work calendar to determine holidays and non-working days. Zero time entries are considered filled entries and are verified according to set limits. Regardless of work calendars, employees can still track time on non-working days and holidays and time threshold limits are applied accordingly.

If you also use advanced approvals, you can choose to require that a time entry be entered for each working day.

**Important:** NetSuite validates set time thresholds within the browser. When an entry is made for the duration of a time transaction, NetSuite validates that the entry fits within the set limits. If an entry is left blank, NetSuite will not validate for that entry. This can create a situation where time transactions are saved that do not meet set threshold limits.

If you use Weekly Timesheets, thresholds are validated on both individual time entries and each timesheet. It is possible for a single time entry to satisfy a daily limit but violate a weekly limit. In this

situation the time entry would generate a warning because of the timesheet the entry is a part of. You can choose to allow time to be submitted after warnings are displayed.

Time thresholds are checked upon submission of the time entries. You can also choose to have the time entries validated again when they are approved.

To set time thresholds, go to Setup > Accounting > Accounting Preferences and make selections for time thresholds at the bottom of the Time Tracking section.

For more information about time thresholds, see the help topic [Time & Expenses Accounting Preferences](#).

## Enabling Time Tracking for CRM

With Time Tracking for CRM, users can track time on tasks, phone calls, events and cases. Tracking time on these activities can help you manage your company by being aware of how much time is spent on certain activities.

**Important:** The Time Tracking feature and the associated permissions are required to use Time Tracking for CRM.

An administrator must enable the feature before users can track time.

### To enable Time Tracking for CRM:

1. Go to Setup > Company > Enable Features
2. Click the **Employees** subtab, and check the **Time Tracking for CRM** box.
3. Click **Save**.

**Important:** If you also use the Projects feature and want to track time for customers, you must disable the **Show Projects Only for Time and Expense Entry** preference located on the Time & Expenses subtab at Setup > Accounting > Accounting Preferences. When this preference is enabled, time can only be tracked for CRM Tasks associated with a project record.

## Enabling Weekly Timesheets

The Weekly Timesheets feature works in conjunction with the existing Time Tracking feature to offer a customizable method of capturing time entries in a weekly format.

**Important:** The Time Tracking feature and the associated permissions are required to use Weekly Timesheets.

An administrator must enable the feature before users can track time using the weekly timesheet.

### To enable Weekly Timesheets:

1. Go to Setup > Company > Enable Features
2. Click the **Employees** subtab, and check the **Weekly Timesheets** box.
3. Click **Save**.

**Note:** Weekly Timesheets is an additional feature that offers a customizable method for entering time on a weekly basis. The Time Tracking feature includes a Weekly Time Tracking page which can be used to track time on a weekly basis without any additional customizations. If enabled, Weekly Timesheets will take the place of the included Weekly Time Tracking.

For more information on using weekly timesheets, see [Using Weekly Timesheets](#).

## Setting Up Time Tracking Preferences

Time tracking lets you track the hours you and other employees work. You can record billable hours and invoice your customers for them.

**Warning:** NetSuite CRM+ users cannot record billable time, invoice customers for billable time, or record time for payroll items.

Set time tracking preferences to determine how you process time that you track.

**Note:** Preferences that appear vary depending on the features you have enabled. If you use NetSuite OneWorld and the **Intercompany Time and Expense** feature is enabled in your account, review the **Intercompany Time** preference available on the **General** subtab of the Accounting Preferences page. This preference indicates whether users can enter time transactions for customers and projects with subsidiaries other than their own. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

### To set time tracking preferences:

1. Go to Setup > Accounting > Preferences > Accounting Preferences.
2. Click the **Time & Expenses** subtab and enable or disable preferences as desired.  
Available preferences may include the ability to override rates on time records, to automatically round time entries, to require approvals on time records, to make time billable by default, to copy time memos to invoices, to show planned time on time tracking records and weekly timesheets, and set time thresholds.  
For more information, see the help topic [Time & Expenses Accounting Preferences](#).
3. Click **Save**.
4. Go to Setup > Company > Preferences > General Preferences.  
Select the day of the week your company uses as the first day of the business week. The day you select is reflected on time tracking forms and on reports.

Next, you can give your employees limited access to your account so they can enter time transactions. To do this, go to Lists > Employees > Employees. Make sure the appropriate employee records are granted access to the Employee Center.

## Giving an Employee Access to Time Tracking

Giving employees access to time tracking enables them to enter the hours they spend working for a particular customer or on a project.

There are three steps you must complete to give employees access to time tracking:

1. An administrator must enable the **Time Tracking** features and set time tracking preferences.
2. You must either set up access on employee records to the Employee Center or assign a custom role with the **Track Time** permission.
3. You must give your employees their login information.

After you have enabled time tracking, you can set preferences for how you want to use the feature.

Next, if you have not already, create an employee record for employees that you want to give access to time tracking. For more information on creating employee records, read [Adding an Employee](#).

### To give an employee access to the Employee Center :

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee to whom you want to give access.
3. Under Email|Phone|Address, ensure the employee's email address is entered.
4. Click the **Access** subtab.
5. Check the **Give Access** box.
6. Check the **Send Notification Email** box to notify your employee of this new access.  
For security, the email message does not disclose the password. You must contact your employee with this information.
7. In the **Password** field, enter a password with which the employee can log in.
8. In the **Confirm Password** field, reenter the password.
9. In the **Role** column, select **Employee Center**.
10. Click **Add** to assign the employee this role.
11. Click **Save**.

Finally, direct your employees to [www.netsuite.com](http://www.netsuite.com), and have them log in with:

- **Email** – the email address you entered on the employee's record
- **Password** – the password you assigned on the employee's record

After employees log in to NetSuite, they can enter time and view their time reports.

If you enabled the **Require Approvals on Time Records** preference, supervisors can also approve time reports entered by the employees they supervise. You can also create custom approval routing workflows to enable more customization of your approval process. With custom approval routing on time entries, employees can approve or reject the entries where they are set as the Next Approver from the Employee Center.

### To assign an employee a custom role with access to time tracking:

1. Go to Setup > Users/Roles > Manage Roles.
2. Click **Customize** next to the role you want to assign with time tracking permission.
3. Enter a name for this custom role.
4. Check the **Restrict Time and Expenses** box to permit employees to enter time for only themselves.
5. On the **Transactions** subtab, select **Track Time** in the **Permission** column.
6. In the **Level** column, select **Full**.

7. Click **Add**.
8. Click **Save**.
9. On employee records, select this role on the **Access** subtab to assign this role and give access to time tracking.

## Restricting Employee Time Tracking Entries

Account administrators can control which names display for certain roles in the time entry list by editing user roles. Limits on this list restrict the ability of employees to enter time for other employees.

### To restrict employees to enter time for only themselves or their subordinates :

1. Go to Setup > Users/Roles > User Management > Manage Roles.
2. Click the **Customize** link next to the role you want to restrict.
3. Enter a new name for the restricted role.
4. On the Role page, in the **Employee Restrictions** field, select **self and subordinates only**.
5. Click **Save**.
6. Repeat steps 2 through 5 for each role you want to restrict from being able to enter time for every employee.

You must update your employee records to assign the restricted roles. For more information, see [Assigning Roles to an Employee](#).

For the roles that you customize, additional areas of NetSuite are restricted based on the selection you've made. For more information, see the help topic [Set Employee Restrictions](#).

## Entering a Time Transaction

Enter time transactions to track the hours you and other employees work.

### To enter a time transaction:

1. Go to Transactions > Employees > Track Time.
2. Select a form for this transaction.
3. Select the employee whose time you are recording.
4. NetSuite inserts the current date as the posting date of this entry. Accept or select the date for this time transaction.
5. In the **Duration** field, enter the amount of time worked for the day.

When you enter time, minutes that total more than 59 are automatically converted to hours to be added to the total time. Time entries can have minutes entered and saved in a range of 0 to 59.

For example, if you enter **:125**, it is interpreted as 125 minutes and is converted to display as 2:05. Likewise, these time entries are converted as follows:

- **0:125** is converted to 2:05 (2 hours and 5 minutes)
- **1:80** is converted to 2:20 (2 hours and 20 minutes)
- **1:120** is converted to 3:00 (3 hours and zero minutes)

If you want to time yourself as you work or time the length of your break, click the **Timer icon** next to the **Duration** field. The elapsed time in the timer fills in the **Duration** field when you click **Submit**.

6. Select a customer or project if the time worked is for a customer or project.

If you use NetSuite OneWorld, the **Intercompany Time and Expense** feature and the related **Intercompany Time** accounting preference determine whether you can select a customer or project with a subsidiary different from yours. If the feature is not enabled, or if the preference is set to **Disallow**, you cannot enter intercompany time transactions. Instead, you can only select customers or projects with the same subsidiary to which you are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

7. If you use the **Project Management** feature and selected a project in the **Customer** field with which this time is associated, you can select a related case, event, or task for the project.
8. Select the service that was provided if you track time spent on services.

If you selected a customer or project, you must select a service item.

 **Note:** The service item description is automatically copied to the memo field for the time transaction. You may turn off this preference at Setup > Accounting > Accounting Preferences on the Time & Expenses subtab.

If you use NetSuite OneWorld, it is recommended that you set up service items that are available to all subsidiaries, for use in intercompany time transactions. In these transactions, users cannot save lines unless they contain service items available to both the employee subsidiary and customer subsidiary. See the help topic [Enabling Intercompany Time and Expenses](#).

9. Check the **Billable** box if this time is billable to a customer or project.

 **Warning:** In NetSuite CRM+, the **Billable** box is not available. NetSuite CRM+ users cannot record billable time, invoice customers for billable time, or record time for payroll items.

10. If your company supports Multi-State Calculations for payroll, select the **Payroll Item Workplace** for this time entry.
11. Select a payroll item if you are tracking time for payroll.
12. Check the **Paid Externally** box if time has been or will be paid outside of NetSuite. This removes the time from payroll transactions. You cannot check this box if this time record is already associated with a paycheck in NetSuite.
13. Optionally enter a memo. You can search for the text you enter here to find this transaction later.

If you are billing this time back to a customer or project, this memo appears as a description for this line item on the customer invoice.

 **Note:** Always select an activity in the **Case/Task/Event** or **Service Item** fields before entering a memo. When you select a case, task, event, or service item, the memo field is automatically populated with information from these records. Anything you entered in the memo field prior to selecting one of these records will be deleted. Changing your selection in either of these fields will update the memo field with any information from the newly selected record.

14. If your company does not use Advanced Approvals for Time, check the **Supervisor Approval** box if you are a supervisor entering time for an employee.

If your company does use Advanced Approvals for Time and you are a supervisor or time approver, select a status for this time entry in the **Approval Status** field. If you use Approval

Routing, you can also select another approver in the **Next Approver** field. For more information, see [Approving or Rejecting a Time Transaction](#).

15. Under Classification, select a department, class, or location if your company tracks this information.

**Important:** If you use NetSuite OneWorld and you are entering intercompany time transactions, you must determine a strategy for using classifications on these transactions. Best practice is to omit them. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

16. If the **Override Rates on Time Records** preference has been enabled on the **Time & Expenses** subtab at Setup > Accounting > Accounting Preferences, the following fields display:
  - **Price Level** - Select a price level. You can use different price levels by going to Setup > Enable Features > Customers/Sales, and checking the **Use Multiple Prices** box.
  - **Rate** - If you selected a price in the **Price Level** field, it automatically appears here. If you do not use multiple prices or if you selected **Custom** in the **Price Level** field, enter a rate for this time transaction. If you are entering time for a payroll item like vacation time, leave this field blank.
  - **Lock this Rate** - If you are billing this time back to a customer, check this box to lock the rate you enter so it's not affected by rate changes that happen before the customer is billed. If you are entering time for a payroll item like vacation time, leave this field blank.
17. Click **Save**.

If your company uses Approval Routing or Advanced Approvals for Time, the employee's supervisor or time approver receives an email notification when time is entered or edited.

You can also enter a time transaction on a customer or project record. To do so, go to Transactions > Employees > Track Time. Click **Edit** next to the customer.

If you billed time back to a customer or project, it appears when you click **Billable Time** on the corresponding invoice page.

If you tracked time for hourly wage payroll items and did not check the **Paid Externally** box, the time appears in the **Hours** column for this employee on the Payroll Run page.

## Deleting or Editing Time Entries

You can delete or edit time entries that you have created for yourself or other employees as long as they have not been approved by a supervisor or time approver. Administrators can delete approved time entries as long as they have not been billed.

### To delete or edit an unapproved time entry:

1. Go to Transactions > Employees > Track Time > List .
2. On the Time Entries page, click **Edit** next to time entry you want to edit or delete.  
You can filter the entries shown by clicking **Filters** to expand the available list filters.
3. On the Time Tracking page, do one of the following:
  - To edit the time entry, enter a new amount of time in the **Duration** field. Change any other information about the time entry as needed.
  - To delete the time entry, choose Actions > Delete.
4. Click **Save**.

If your company uses Approval Routing or Advanced Approvals for Time, the employee's supervisor or time approver receives an email notification each time a time entry is edited.

## Using Weekly Time Tracking

With weekly time tracking, you can track the hours you and other employees work for a week at a time.

To track time, an administrator should go to Setup > Enable Features > Employees, check the Time Tracking box, and click Save.

 **Note:** If your company uses weekly timesheets, see [Using Weekly Timesheets](#).

### To use weekly time tracking:

1. Go to Transactions > Employees > Weekly Time Tracking.
2. Select the employee whose time you are recording.
3. In the **Date** field, enter the first day of the week you want to track time for, or click the **Pick** link to choose a date.

NetSuite inserts the date that the current week begins as the posting date of this week's time.

You can set the day your company's business week starts by going to Setup > Accounting > Preferences > Accounting Preferences. Click the **General** subtab.

4. If you use Project Management, you can import any planned time entries for the selected employee and week. Click **Import Planned Time** to automatically import the project time entries for the current week.
5. If you do not use the Advanced Approvals preference, check the **Supervisor Approval** box if you are a supervisor entering time for an employee.
6. On the **Enter Time** subtab, in the **Customer** column, select a customer or project if the time worked is for a customer or project.

If you use NetSuite OneWorld, the **Intercompany Time and Expense** feature and the related **Intercompany Time** accounting preference determine whether you can select a customer or project with a subsidiary different from yours. If the feature is not enabled, or if the preference is set to **Disallow**, you cannot enter intercompany time transactions. Instead, you can select only those customers or projects with the same subsidiary to which you are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

7. If you use the **Project Management** feature and selected a project in the **Customer** field, use the **Case/Task/Event** column to select an activity associated with the project and time.
8. If your company uses multi-state calculations for payroll, select a **Payroll Item Workplace**.
9. Check the **Billable** box if this time is billable to a customer or project.

**Warning:** In NetSuite CRM+, the **Billable** box is not available. NetSuite CRM+ users cannot record billable time, invoice customers for billable time, or record time for payroll items.

10. Select a payroll item if you are tracking time for payroll.
11. Select the service that was provided if you track time spent on services.

If you selected a customer or project, you must select a service item.

If you use NetSuite OneWorld, it is recommended that you set up service items that are available to all subsidiaries, for use in intercompany time transactions. In these transactions, users cannot

save lines unless they contain service items available to both the employee subsidiary and customer subsidiary. See the help topic [Enabling Intercompany Time and Expenses](#).

12. Select a department, class, or location if you track this information.

**Important:** If you use NetSuite OneWorld and you are entering intercompany time transactions, you must determine a strategy for using classifications on these transactions. Best practice is to omit them. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

13. If the **Override Rates on Time Records** preference has been enabled on the **Time & Expenses** subtab at Setup > Accounting > Accounting Preferences, the following fields display:
  - **Price Level** - Select a price level. You can use different price levels by going to Setup > Enable Features > Customers/Sales, and checking the **Use Multiple Prices** box.
  - **Rate** - If you selected a price in the **Price Level** field, it automatically appears here. If you do not use multiple prices or if you selected **Custom** in the **Price Level** field, enter a rate for this time transaction. If you are entering time for a payroll item like vacation time, leave this field blank.
  - **Lock this Rate** - If you are billing this time back to a customer, check this box to lock the rate you enter so it's not affected by rate changes that happen before the customer is billed. If you are entering time for a payroll item like vacation time, leave this field blank.
14. Enter a memo.

If you are billing this time back to a customer or project, this memo appears as a description for this line item on the customer invoice.

**Note:** Always select an activity in the **Case/Task/Event** or **Service Item** fields before entering a memo. When you select a case, task, event, or service item, the memo field is automatically populated with information from these records. Anything you entered in the memo field prior to selecting one of these records will be deleted. Changing your selection in either of these fields will update the memo field with any information from the newly selected record.

15. Enter the hours for each day in this week.
16. Click **Add**.
17. Repeat steps above for each customer or project you need to enter time against.
18. Click **Save** to save the entries. If you use Advanced Approvals, you can also click **Submit** to save and submit the entries

When time is saved, the time then appears on the Time Details subtab of the time tracking for that week.

If you billed time back to a customer or project, it appears when you click Billable Time on the corresponding invoice page.

If you tracked time for hourly wage payroll items, it appears in the Hours column for this employee on the Payroll Run page.

In addition to entering new time each week, you can also copy the time entries from a previous week on to the current week.

### To copy a previous week for weekly time tracking:

1. Go to Transactions > Employees > Weekly Time Tracking.
2. Click **Copy from Week**. A window opens with the start date of the previous week's time automatically populated.

3. In the **Date** field, you can accept the date automatically entered or use the date selector to select a different date.
4. If your company enables employees to choose to copy hours and memos, clear the **Copy Hours and Memos** box if you do not want hours and memos from the selected week to be copied to the current week.
5. Click **Copy**. Time entries within the selected week are copied to the weekly time tracking page currently being edited. Depending on your company's preferences, copied time entries may include hours and memos.
6. Continue to fill in required information for this time. When you have finished, click **Save**.

To view a list of all weekly time tracking entries you have permission to view, go to Transactions > Employees > Weekly Time Tracking > List. This list displays the employee, date, hours, and approval status of each week.

## Advanced Approvals

If your company uses the Advanced Approvals on Time preference, after time is saved on your Weekly Time Tracking page, the background of each entry reflects that entry's approval status.

- Open — white
- Approved — green
- Rejected — red
- Pending — blue

Advanced approvals enables your employees to know the status of their time entries within a single week just by looking at the Weekly Time Tracking page. When rejecting transactions, advanced approvals enables you to add a rejection note. For more information on Advanced Approvals, see [Approving or Rejecting a Time Transaction](#).

## Using Weekly Timesheets

Weekly timesheets works in conjunction with the existing Time Tracking feature to offer a customizable method of capturing time entries in a weekly format.

To track time with weekly timesheets, an administrator should go to Setup > Enable Features > Employees, check the Time Tracking and Weekly Timesheets boxes, and click Save.

 **Note:** If your company uses weekly time tracking, see [Using Weekly Time Tracking](#).

 **Important:** If your company has enabled the Weekly Timesheet Interface, the user interface will differ slightly from the steps described below. For more information on the changes, see [Weekly Timesheets Interface](#).

### To use weekly timesheets:

1. Go to Transactions > Employees > Weekly Timesheet.
2. Select the employee whose time you are recording.
3. In the **Week of** field, enter the first day of the week you want to track time for, or click the **Pick** link to choose a date.

NetSuite inserts the date that the current week begins as the posting date of this week's time.

You can set the day your company's business week starts by going to Setup > Accounting > Preferences > Accounting Preferences. Click the **General** subtab.

 **Note:** If you change the first day of the week preference for your company, the newly selected first day of the week will be used for any new timesheets. Any existing timesheets will remain unchanged. New timesheets may be shorter to accommodate the new first day of the week. The first day of the week preference can be set at the company, subsidiary (for OneWorld accounts), and user level. Weekly Timesheets is only affected by the company and subsidiary preference. The user level preference has no effect on the first day of the week for weekly timesheets.

4. If you use Project Management, you can import any planned time entries for the selected employee and week. Click **Import Planned Time** to automatically import the project time entries for the current week.

5. On the **Enter Time** subtab, in the **Customer** column, select a customer or project if the time worked is for a customer or project.

If you use NetSuite OneWorld, the **Intercompany Time and Expense** feature and the related **Intercompany Time** accounting preference determine whether you can select a customer or project with a subsidiary different from yours. If the feature is not enabled, or if the preference is set to **Disallow**, you cannot enter intercompany time transactions. Instead, you can select only those customers or projects with the same subsidiary to which you are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

6. If you use the **Project Management** feature and selected a project in the **Customer** field, use the **Case/Task/Event** column to select an activity associated with the project and time.
7. If your company uses multi-state calculations for payroll, select a **Payroll Item Workplace**.
8. Check the **Billable** box if this time is billable to a customer or project.

 **Warning:** In NetSuite CRM+, the **Billable** box is not available. NetSuite CRM+ users cannot record billable time, invoice customers for billable time, or record time for payroll items.

9. Select a payroll item if you are tracking time for payroll.
10. Select the service that was provided if you track time spent on services.

If you selected a customer or project, you must select a service item.

If you use NetSuite OneWorld, it is recommended that you set up service items that are available to all subsidiaries, for use in intercompany time transactions. In these transactions, users cannot save lines unless they contain service items available to both the employee subsidiary and customer subsidiary. See the help topic [Enabling Intercompany Time and Expenses](#).

11. Select a department, class, or location if you track this information.

 **Important:** If you use NetSuite OneWorld and you are entering intercompany time transactions, you must determine a strategy for using classifications on these transactions. Best practice is to omit them. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

12. If the **Override Rates on Time Records** preference has been enabled on the **Time & Expenses** subtab at Setup > Accounting > Accounting Preferences, the following fields display:
  - **Price Level** - Select a price level. You can use different price levels by going to Setup > Enable Features > Customers/Sales, and checking the **Use Multiple Prices** box.
  - **Rate** - If you selected a price in the **Price Level** field, it automatically appears here. If you do not use multiple prices or if you selected **Custom** in the **Price Level** field, enter a rate for this

time transaction. If you are entering time for a payroll item like vacation time, leave this field blank.

- **Lock this Rate** - If you are billing this time back to a customer, check this box to lock the rate you enter so it's not affected by rate changes that happen before the customer is billed. If you are entering time for a payroll item like vacation time, leave this field blank.

13. Enter a memo.

If you are billing this time back to a customer or project, this memo appears as a description for this line item on the customer invoice.

 **Note:** Always select an activity in the **Case/Task/Event** or **Service Item** fields before entering a memo. When you select a case, task, event, or service item, the memo field is automatically populated with information from these records. Anything you entered in the memo field prior to selecting one of these records will be deleted. Changing your selection in either of these fields will update the memo field with any information from the newly selected record.

14. Enter the hours for each day in this week.

15. Click **Add**.

16. Repeat steps above for each customer or project you need to enter time against.

17. Click **Save** to save the entries. If you use Advanced Approvals, you can also click **Save & Submit** to save and submit the entries

When a timesheet is saved, the time then appears on the Time Details subtab of the timesheet for that week.

If you billed time back to a customer or project, it appears when you click Billable Time on the corresponding invoice page.

If you tracked time for hourly wage payroll items, it appears in the Hours column for this employee on the Payroll Run page.

In addition to entering new time each week, you can also copy the time entries from a previous week on to the current week.

### To copy a previous week for a weekly timesheet:

1. Go to Transactions > Employees > Weekly Timesheet.
2. Click **Copy from Week**. A window opens with the start date of the previous week's time automatically populated.
3. In the **Date** field, you can accept the date automatically entered or use the date selector to select a different date.
4. If your company enables employees to choose to copy hours and memos, clear the **Copy Hours and Memos** box if you do not want hours and memos from the selected week to be copied to the current week.
5. Click **Copy**. Time entries within the selected week are copied to the weekly timesheet currently being edited. Depending on your company's preferences, copied time entries may include hours and memos.
6. Continue to fill in required information for this time. When you have finished, click **Save**.

To view a list of all the weekly timesheets you have permission to view, go to Transactions > Employees > Weekly Timesheet > List. This list displays the employee, date, hours, and approval status of each week.

## Customizing Weekly Timesheets

When you customize your weekly timesheet you must create two custom forms. First, you create a custom time bill form for your time entries. Then, you create a custom timesheet form and select the custom time entry form as the basis for the time entry grid on your timesheet.

### To customize a weekly timesheet:

1. Go to Transactions > Employees > Weekly Timesheet.
2. Click **Customize Time Bill Form** in the Customize menu on the upper right corner of the page. A Custom Entry Form page opens.
3. Enter a name for your custom time bill form.
4. Make any changes you'd like to the form. For more information on customizing entry forms, see the help topic [Creating Custom Entry and Transaction Forms](#).

**Note:** The changes you make to the custom time bill form will change how the time entry grid appears on your weekly timesheets.

5. When you have finished, click **Save**.
6. Go to Transactions > Employees > Weekly Timesheet.
7. Click **Customize Form** in the Customize menu on the upper right corner of the page. A Custom Entry Form page opens.
8. Enter a name for your custom timesheet form.
9. In the **Time Entry Custom Form** field, select the name of your custom time bill form.
10. Make any additional changes you'd like to the form.
11. When you have finished, click **Save**.

Your custom form is now available for weekly timesheets.

## Weekly Timesheets Interface

If your company has enabled the New Weekly Timesheet Interface, the Weekly Timesheet page has been updated to include several enhancements to the user interface. Column headers are now fixed at the top of the line-items so that they are visible at all times. Time entries are also now fixed on the screen. You can side scroll to see other information about each line but the time entries will remain visible. The top of each column will display the total hours for each day.

You can now add a memo to a single time entry with a pop-up window that is saved automatically when you click away from the window. You can use form customization to add fields to the pop-up window. For saved time, the pop-up window also includes a Time Details link that opens the individual time entry in a new window. A memo icon appears in the corner of each time entry that has a memo. Approvers can now approve or reject single time entries from the pop-up window on the weekly timesheet.

The Copy From Week and Import Planned Time buttons have been relocated to the Enter Time subtab. The Time Details subtab has been replaced by a Planned Time subtab. The Planned Time subtab shows any upcoming planned project time entries. You can now scroll through timesheets more easily by clicking the arrows on either side of the Week Of field.

To enable the new interface for Weekly Timesheets, go to Setup > Company > Enable Features > Employees. Check the New Weekly Timesheets Interface box, and click Save. After the feature is enabled, all users with timesheet permissions will use the new user interface.

## Advanced Approvals

If your company uses the Advanced Approvals on Time preference, after time is saved on your Weekly Timesheet page, the background of each entry reflects that entry's approval status.

- Open — white
- Approved — green
- Rejected — red
- Pending — blue

Advanced approvals enables your employees to know the status of their time entries within a single week just by looking at the Weekly Timesheet page. When rejecting transactions, advanced approvals enables you to add a rejection note. For more information on Advanced Approvals, see [Approving or Rejecting a Time Transaction](#).

## Using the Timer to Track Time

Time tracking lets you track the hours you and other employees work. You can enter the hours worked manually, use NetSuite's time calculator, or use NetSuite's Timer.

You can use the Timer to time your break or to time your entire day's work.

If you use the Timer, you cannot navigate away from the Time Tracking page and the Timer popup window. If you do, the Timer is stopped and NetSuite does not save the elapsed time.

### To use the Timer for your break:

1. Go to Transactions > Employees > Track Time.
2. Enter the time tracking details as appropriate.
3. Next to the **Duration** field, click the **Timer** icon.
4. When the Timer popup window appears, click **Start** when your break begins.
5. Click **Stop** when your break is over.
6. Click **Submit**.

The elapsed time automatically appears in the **Break** field. NetSuite rounds down to the nearest minute. For example, if the **Elapsed Time** field says **0:03:55**, **0:03** appears in the **Duration** field.

7. Fill in any additional information, and then click **Save**.

You can also use the Timer to time your entire day's work, rather than your break.

### To use the Timer for an entire day's work:

1. Go to Transactions > Employees > Track Time.
2. Enter the time tracking details as appropriate.
3. Next to the **Duration** field, click the **Timer** icon.
4. When the Timer popup window appears, click **Start** when you begin working.
5. Click **Pause** when you take a break.
6. Click **Start** again when you come back from your break.
7. Click **Stop** when you finish working.
8. Click **Submit**.

The elapsed time automatically appears in the **Duration** field. NetSuite rounds down to the nearest minute. For example, if the **Elapsed Time** field says **0:03:55**, **0:03** appears in the **Duration** field.

9. Fill in any additional information, and then click **Save**.

Using the Timer, NetSuite tracks your hours for you so you do not have to enter them manually.

## Calculating Total Time Worked

Time tracking lets you track the hours you and other employees work. You can enter the hours worked manually, use NetSuite's Timer, or use NetSuite's time calculator.

### To calculate your total time:

1. Go to Transactions > Employees > Track Time.
2. Enter the time tracking details as appropriate.
3. Next to the **Duration** field, click the **Calculate** link.
4. In the **Start Time** field, enter the time that the employee started working.  
Enter the time in hours and minutes and include **AM** or **PM**, otherwise NetSuite automatically uses **AM**.
5. In the **End Time** field, enter the time the employee stopped working.
6. In the **Break** field, enter the length time of the employee's break.  
NetSuite automatically calculates the total time for you.
7. Click **Save**.  
The total time appears in the **Duration** field of the Time Tracking page.
8. Fill in any additional information, and then click **Save**.

Using NetSuite's time calculator, you can calculate your total time so you do not have to enter them manually.

## Entering Time for a Payroll Item

Time tracking lets you track the hours you and other employees work. If you are in the U.S. and you have the appropriate privileges, you can track time for employee payroll items like hourly wages.

 **Warning:** NetSuite CRM+ users cannot record time for payroll items.

If you track time for employee payroll items and want these hours to be included in the payroll period, you must enable this feature on the appropriate employee records.

 **Note:** If an employee enters PTO after payroll cut-off date, the PTO is processed and recorded in the following regular payroll.

### To set up employees' records so that their time transactions are included in payroll:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the name of the appropriate employee.
3. When the employee's record appears, click the **Payroll** subtab.
4. In the **Compensation Type** field, select **Wage** to pay this employee based on an hourly wage and hours worked.

5. Click **Save**.
6. Repeat steps 2 through 5 for any other employees you want to set up.

### To enter time for a payroll item:

1. Go to Transactions > Employees > Track Time.
2. Choose an entry form to use.
3. Select the employee whose time you are recording.
4. NetSuite inserts the current date as the posting date of this time transaction.
5. In the **Duration** field, enter the amount of time worked for the day.  
Click the timer icon next to the **Duration** field to time yourself as you work or time the length of your break. When you click **Submit**, the elapsed time in the timer fills in the **Duration** field of the Time Tracking page.
6. If applicable, select the **Customer or Project** associated with the tracked time.  
If you use NetSuite OneWorld, the **Intercompany Time and Expense** feature and the related **Intercompany Time** accounting preference determine whether you can select a customer or project with a subsidiary different from yours. If the feature is not enabled, or if the preference is set to **Disallow**, you cannot enter intercompany time transactions. Instead, you can select only those customers or projects with the same subsidiary to which you are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).
7. Select a case, task, event or call for the customer or project you selected, to associate this time with an activity. This time entry is added to the record you select.
8. If applicable, select the service item that was provided. If you select a service item, you must also select a customer or project. Click **New** to set up a new service item.  
If you use NetSuite OneWorld, it is recommended that you set up service items that are available to all subsidiaries, for use in intercompany time transactions. In these transactions, users cannot save lines unless they contain service items available to both the employee subsidiary and customer subsidiary. See the help topic [Enabling Intercompany Time and Expenses](#).
9. Check **Billable** if you want to bill the time entered to a customer or project.

**Warning:** In NetSuite CRM+, the **Billable** box is not available. NetSuite CRM+ users cannot record billable time, invoice customers for billable time.

10. If your company using multi-state calculations for payroll, select a **Payroll Item Workplace**.
11. Select a payroll item in the **Payroll Item** field.
12. Check the **Paid Externally** box if this time has been or will be paid outside of NetSuite. This removes this time from payroll transactions. You cannot check this box if this time is already associated with a paycheck in NetSuite.
13. Optionally enter a memo.
14. If you are a supervisor entering time for an employee, check the **Supervisor Approval** box.
15. Select a department, class, or location if you track this information.

**Important:** If you use NetSuite OneWorld and you are entering intercompany time transactions, you must determine a strategy for using classifications on these transactions. Best practice is to omit them. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

16. If you selected a **Customer or Project**, NetSuite inserts the price level for that customer or project in the **Price Level** field.

The **Rate** field autofills with the amount associated with the price level.

17. If you are billing this time back to a customer, check **Lock the Rate** to lock the present rate so it's not affected by any rate changes made before the customer is billed.
18. Click **Save**.

If you tracked time for hourly wage payroll items, it appears in the Hours column for this employee on the Payroll Run page.

## Adding a Custom Field to Time Tracking Pages

You can create a custom field that appears on time tracking pages. This gives you additional flexibility in tracking information that's important to your business.

You can add a custom field to the column area on time tracking pages.

### To add a custom column field to time transactions:

1. Go to Customization > Lists, Records, & Fields > Transaction Column Fields > New.
2. In the **Label** field, enter a name or description for this field. The name appears as a column heading on transactions.
3. If you use custom code, enter a unique ID for this custom field.  
NetSuite enables you to enter custom JavaScript files to perform functions specific to your business. If you do not enter an ID now, NetSuite automatically assigns one. This ID cannot be edited after it has been created.
4. Select the owner of this field. Only the owner can edit this record.
5. Enter a description for your custom field.  
This description appears next to the field on time tracking pages.
6. Select the type of custom field you want to add.
7. If you entered a custom list and you want to attach it to your transaction custom field, select the appropriate list in the **List/Record** field.
8. The **Store Value** box is checked by default. This means that information entered in this custom field is stored in your NetSuite account.  
Clear this box to indicate that the information stored in this custom field is for display only. The information is not stored in your account.
9. On the **Applies To** subtab, check the **Time** box.
10. On the **Validation & Defaulting** subtab, check the **Mandatory** box to make this a required field on the transactions you select.
11. Enter a **Default Value** for this field.
12. If you selected **List/Record** in the type field and you want to assign a default value, assign the appropriate selection in the **Default Selection** field.
13. Check **Default Checked** if you want this box to default to a checked state on the transactions pages you select.
14. On the **Sourcing & Filtering** subtab, if you have entered an item custom field and want to attach it to your transaction custom field, select it in the **Source** field.
15. Click **Save**.

Your custom field automatically appears on the Time Tracking page. When tracking weekly time, your custom field appears in the columns of Weekly Time Tracking or Weekly Timesheet pages.

If your company does not use the Combine Time Items on Invoices preference and you bill the cost of a time transaction back to a customer, you can choose to include your custom field on all custom invoices except finance charge invoices.

**Warning:** NetSuite CRM+ users cannot record billable time or invoice customers for billable time.

### To include your transaction custom field on a custom invoice:

1. Go to Customization > Forms > Transaction Forms.
2. In the **Edit** column, choose one of two options:
  - Click **Customize** next to the appropriate form name to create a new custom form.
  - Click **Edit** next to the appropriate form name to include your custom field on an existing custom form.
3. When the Custom Form page appears, enter a name for your form so it is recognizable when selecting it on the Invoice page.
4. Click the **Printing Fields** subtab.
5. Click the **Columns** subtab.
6. Locate the name of your transaction custom field in the **Description** column.
7. Check the corresponding **Screen** and **Print/Email** boxes.
8. Click **Save**.

The information you enter in your transaction custom field on the Time Tracking page now appears on the corresponding invoice you create.

If your company uses the Combine Time Items on Invoices preference, you cannot include transaction custom fields on invoices because the information you enter in these fields may be different for each time record.

If your company uses Weekly Timesheets, you can also add custom body fields to the top of timesheets.

### To add a custom body field to weekly timesheets:

1. Go to Customization > Lists, Records, & Fields > Other Custom Fields > New.
2. In the **Record Type** field, select **Timesheet**.
3. In the **Label** field, enter a name or description for this field.
4. If you use custom code, enter a unique ID for this custom field.
 

NetSuite enables you to enter custom JavaScript files to perform functions specific to your business. If you do not enter an ID now, NetSuite automatically assigns one. This ID cannot be edited after it has been created.
5. Select the owner of this field. Only the owner can edit this record.
6. Enter a description for your custom field.
 

This description appears next to the field on time tracking pages.
7. Select the type of custom field you want to add.
8. If you entered a custom list and you want to attach it to your custom field, select the appropriate list in the **List/Record** field.

9. The **Store Value** box is checked by default. This means that information entered in this custom field is stored in your NetSuite account.  
Clear this box to indicate that the information stored in this custom field is for display only. The information is not stored in your account.
10. On the **Validation & Defaulting** subtab, check the **Mandatory** box to make this a required field on the transactions you select.
11. Enter a **Default Value** for this field.
12. If you selected **List/Record** in the type field and you want to assign a default value, assign the appropriate selection in the **Default Selection** field.
13. Check **Default Checked** if you want this box to default to a checked state on the transactions pages you select.
14. On the **Sourcing & Filtering** subtab, if you have entered an item custom field and want to attach it to your transaction custom field, select it in the **Source** field.
15. Click **Save**.

You new custom field automatically appears in the top portion of weekly timesheets.

## Approving or Rejecting a Time Transaction

Time approval is restricted to the Employee Center and the user role. You can either have your users track and approve time in the Employee Center or you can edit the user role and set employee restrictions. If you do not set employee restrictions on the user role, users can approve all time entries rather than only those of their subordinates.

You can select either a time approver or supervisor.

- The Time Approver field appears on the Human Resources subtab of an employee record.
- The Supervisor field shows under Primary Information on an employee record.

After you assign a time approver or supervisor to an employee record, that user has the authority to approve time for the employee. Time approvers cannot edit or delete existing time entries. If no time approver is selected, then the employee's supervisor approves time entries. If both a supervisor and a time approver are selected, then only the time approver can approve time entries using their Employee Center role. For more information, see [Adding an Employee](#).

The employee's supervisor or time approver receives an email notification when time is entered or edited.

If you also use Project Management, you have additional options for approving project time. For more information, see the help topic [Approving Time and Expenses for Projects](#).

## Advanced Approvals

The Advanced Approvals preference offers additional statuses, a color-coded display when viewing weekly time tracking and weekly timesheets, and the ability to reject time entries and add a rejection note. After you have enabled the preference, the Supervisor Approval field on time entries and weekly time tracking and timesheets is replaced by an Approval Status field.

This field is editable by administrators and any role without time and expense restrictions. This field enables you to set the status of time entries to Open, Pending Approval, Approved, or Rejected. When viewing weekly time tracking or timesheets, approved entries are displayed with a green background,

open entries have a white background, rejected entries have a red background, and pending entries have a blue background.

### To set approval preferences:

1. Go to Setup > Accounting > Accounting Preferences.
2. Click the **Time & Expenses** subtab.
3. Check the **Require Approvals on Time Records** box.
4. If you'd like to use Advanced Approvals, check the **Advanced Approvals on Time Records** box.
5. Click **Save**.

 **Warning:** If you decide at a later date to disable the Advanced Approvals preference, you must first adjust any time transactions with an Open or Rejected status to a Pending Approval status. Making these adjustments will prevent any further complications when the preference is turned off.

If you choose to enable Advanced Approvals on Time Records, you can also use SuiteFlow and Approval Routing to create custom approval workflows for your time entries. When using custom approval workflows, the Approve Time page is only available for time entry records. The Approve Timesheets pages is not available for custom approval workflows. For more information, see the help topics [SuiteFlow Overview](#) and [Approval Routing](#).

For more help setting up the time tracking feature and related preferences, see [Setting Up Time Tracking Preferences](#).

With Time Tracking, you can approve individual time entries from the Approve Time page.

### To approve or reject time with Time Tracking:

1. Go to Transactions > Employees > Approve Time.

 **Note:** If you also use Weekly Timesheets, approving time defaults to the Approve Timesheets view. For more information see below. You can click **Switch to Time Entry view** to proceed with approving or rejecting time entries individually.

2. On the Approve Time page, select the name of the employee whose time you want to approve or reject.

You can also identify a specific pay period for that employee by selecting a date in the **Week Of** field.

For this employee, each time record displays the following information by default:

- Employee name
- Date of the time record
- Case/Task/Event
- Customer
- Service Item
- Payroll Item
- Number of hours entered
- Memo
- The **Billable** column indicates if the time entered can be billed back to the customer.

3. Optionally, click **Customize** to add filters or to select the columns to display on the Approve Time page. On the Customize page:
  1. Click the **Criteria**, **Results**, or **Available Filters** subtabs.
  2. Add or remove fields on the **Criteria** subtab to filter the results by other fields. Add or remove fields on the **Results** subtab to change the columns displayed. Add or remove fields on the **Additional Filters** to add filters to the page.

4. In the **Select** column, check the boxes next to the time records you want to approve or reject.

**Important:** You cannot approve and reject entries together. All the entries you select will either be all approved or all rejected. If you have multiple entries to both approve and reject, you must repeat this process for approval and again for rejection.

**Note:** You can approve or reject multiple time entries at one time, but each individual record must be selected. You cannot select time entries on a weekly basis from the Approve Time page..

5. Click **Approve** to approve the selected time entries.

Click **Reject** to reject the selected time entries without a rejection note.

Click **Reject with Note** to reject the selected time entries and add a rejection note to each selected entry. You can only add a single rejection note. The note you enter is copied to all the selected time entries.

**Warning:** Employees with appropriate permissions can modify previously approved time.

If you use Weekly Timesheets, you can approve or reject multiple entries at once.

### To approve or reject time with Weekly Timesheets:

1. Go to Transactions > Employees > Approve Time.
2. On the Approve Timesheets page, select the name of the employee whose time you want to approve.  
 You can also identify a specific pay period for that employee by selecting a date in the **Week Of** field.  
 For this employee, each time record displays the following information by default:
  - **Employee**
  - **Period**
  - **Approvable Hours**
 You can click the link in the **Approvable Hours** column to open a popup that displays the individual time entries.  
 Optionally, you can click **Switch to Time Entry view** to display each individual time entry.
3. Optionally, click **Customize** to add filters or to select the columns to display on the Approve Timesheets page. On the Customize page:
  1. Click the **Criteria**, **Results**, or **Available Filters** subtabs.
  2. Add or remove fields on the **Criteria** subtab to filter the results by other fields. Add or remove fields on the **Results** subtab to change the columns displayed. Add or remove fields on the **Additional Filters** to add filters to the page.
4. In the **Select** column, check the boxes next to the timesheets you want to approve or reject.

**Important:** You cannot approve and reject timesheets together. All the timesheets you select will either be all approved or all rejected. If you have multiple timesheets to both approve and reject, you must repeat this process for approval and again for rejection.

**Note:** When approving or rejecting time entries from the timesheet view, checking the box next to a timesheet will approve or reject all entries listed on the timesheet. When approving or rejecting time entries from the time entry view, each box approves or rejects only the individual time entry.

5. Click **Approve** to approve the selected timesheets.

Click **Reject** to reject the selected timesheets without a rejection note.

Click **Reject with Note** to reject the selected timesheets and add a rejection note to each selected entry. You can only add a single rejection note. The note you enter is copied to all the selected time entries.

**Warning:** Employees with appropriate permissions can modify previously approved time.

Approved time can be used to bill customers and process payroll.

If you bill time back to a customer or project, the time shows on the Billable Time subtab on the invoice.

If you track time for hourly wage payroll items, the time shows in the Hours column for each employee on the Payroll Run page.

**Warning:** NetSuite CRM+ users cannot record billable time, invoice customers for billable time, or record time for payroll items.

## Timesheets

We are no longer initiating new installations of the Timesheets feature. We are currently in the process of making improvements to NetSuite's time tracking capabilities. These improvements will be available in future releases.

Existing Timesheets users may continue to use the feature. The guide below contains all the currently available help documentation on the Timesheets feature.

[Timesheets Guide](#)

If you have any further questions, please contact your Account Manager to discuss your time tracking needs so that we may find a solution that best fits your company.

**Note:** The Timesheets feature is a separate feature from Time Tracking. For more information, see [Managing Time Tracking](#).

# Expense Reports and Purchase Requests

- [Expense Reporting](#)
- [Giving an Employee Access to Purchase Requests](#)
- [Notifying a Supervisor or Approver About Required Approvals](#)

## Expense Reporting

The Expense Reports feature enables users to enter expense reports and convert them into bills. An expense report records employees' expenditures to track information about the expense such as the following:

- what was purchased
- how much was spent
- reason for the purchase
- whether it can be billed to a customer or project

The expense total remains in an unapproved expense account and has no accounting impact until the expense is approved by someone with accounting authority. After an expense report is approved, a bill is created and the expense amount is reflected on your books. The posting period for an expense report is determined after accounting approval occurs. If the posting period for the expense report date is closed, the expense report is posted to the first open period.

For information about expense reporting, see the following:

- [Understanding Expense Reports](#)
- [Giving an Employee Access to Expense Reporting](#)
- [Notifying a Supervisor or Approver About Required Approvals](#)
- [Entering an Expense Report](#)
- [Deleting an Expense Report from the Expense Reports List](#)
- [Rejecting an Expense Report from the Expense Reports List](#)
- [Reviewing Expense Reports](#)
- [Approving an Expense Report](#)
- [Giving Accounting Approval for Expense Reports](#)
- [Understanding Expense Categories](#)
- [Paying Expenses on Employee Paychecks with NetSuite Payroll](#)

 **Note:** If the Multiple Currencies feature is enabled, be aware that expense line item amounts are always in the base currency of the employee. If the Use Multi Currency box is checked on an expense report, line item amounts can be entered in foreign currency, and these foreign amounts are translated into base currency amounts. Exchange rates and converted amounts displayed on expense lines are provided as approximations only. Actual reimbursement amounts will be based on rates at the time of reimbursement.

## Understanding Expense Reports

See the following to get an understanding of how expense reports work in NetSuite:

- [Expense Reports Features and Preferences](#)

- [Employee Entry of Expense Reports](#)
- [Supervisor Approval of Expense Reports](#)
- [Accounting Approval of Expense Reports](#)

## Expense Reports Features and Preferences

A user with the Enable Features permission can enable the Expense Reports feature at Setup > Company > Enable Features, on the Employees subtab. When the Expense Reports feature is enabled, NetSuite automatically creates an Other Current Asset type account for advances paid and a non-posting account for unapproved expense reports.

The Approval Routing feature provides the setup of an approval hierarchy required to process expense reports, time transactions, and purchase requests. When this feature is enabled, after an employee enters an expense report or purchase request, additional processing of the transaction depends on the employee's expense limit or purchase limit, the employee's designated supervisor or approver, and the approval limit of the supervisor or approver.

**Important:** When changes are made in the approval hierarchy for an employee, any expense reports not already approved are reset and must start the approval process over. For example, if an employee is assigned a new supervisor, any existing approvals of open expense reports are removed. The report is rerouted through the approval process based on the employee's new approval hierarchy.

If this feature is not enabled, each expense report or purchase request is automatically routed to the employee's immediate supervisor and then to accounting. For more information, see the help topic [Approval Routing](#).

To set preferences for entering expenses, go to Setup > Accounting > Accounting Preferences, and click the Time & Expenses subtab. For more information, see the help topic [Time & Expenses Accounting Preferences](#).

The fields that display on an expense report include the date the expense report was entered into the system, expense report number, employee filing the expense report, date range of the expenses included in the expense report, purpose of the expense, expense category, date of the expense, expense of each item, any advance toward expenses, and the sum of all the expenses. Expense reports include a summary box in the upper corner of the entry form to display totals for the transaction. The expense report also includes both the employee and approver signature and date. Expense reports can be customized to display additional fields. For more information, see the help topic [Report Customization](#).

**Note:** If you use NetSuite OneWorld, the Intercompany Time and Expense feature and the related Intercompany Expenses accounting preference affect users' ability to enter expenses worked for customers with subsidiaries other than their own. If the feature is not enabled, or if the preference is set to Disallow, users cannot enter intercompany expenses transactions; they can only select customers with the same subsidiary to which they are assigned. If the preference is set to Allow, intercompany expenses are permitted and all subsidiaries are available to expense lines. If the preference is set to Allow and Adjust, you can generate automatic adjustments for intercompany expenses. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

## Employee Entry of Expense Reports

For an employee to be able to enter an expense report, the employee must have access to the Employee Center. An administrator can give Employee Center access to an employee by editing that

employee's record, available at Lists > Employees > Employees. For more information, see [Giving an Employee Access to Expense Reporting](#).

Usually, employees enter expense reports when logged in with the Employee Center role. Some employees may have other assigned roles with the Expense Reports permission, and may be able to enter expenses when logged in with a role other than Employee Center. If approval routing is set up, however, all expense reports must be entered through the Employee Center to maintain the hierarchy of approval routing. For more information, see [Entering an Expense Report](#).

## Supervisor Approval of Expense Reports

If the Approval Routing feature is not enabled, an employee's immediate supervisor must approve an expense report after it is completed. If Approval Routing is enabled and set up, one or more supervisors or approvers may need to approve an expense report before it is sent to accounting for approval.

**Important:** When changes are made in the approval hierarchy for an employee, any expense reports not already approved are reset and must start the approval process over. For example, if an employee is assigned a new supervisor, any existing approvals of open expense reports are removed. The report is rerouted through the approval process based on the employee's new approval hierarchy.

A preference can be set so supervisors/approvers can be notified automatically by email when expense reports have been submitted for their approval. See [Notifying a Supervisor or Approver About Required Approvals](#).

Supervisors or other approvers normally approve expense reports in the Employee Center. For information, see the help topic [Approving an Expense Report](#).

## Accounting Approval of Expense Reports

After an expense report has received supervisory approval, it has a status of Pending Accounting Approval, and requires this accounting approval for its amounts to be posted. See [Giving Accounting Approval for Expense Reports](#).

The posting period for an expense report is determined after the expense report is approved by accounting. If this approval occurs after the expense report date's posting period has closed, the expense report is posted to the first open period.

## Voiding Expense Reports

Expense reports can be voided by administrators and employees during any stage of approval. Voiding an expense report after it has been approved by accounting creates an accounting impact. Expense reports have no accounting impact prior to accounting approval. When an expense report is voided, the status is changed to Void and the expense report is removed from approval lists.

**Note:** Rarely, a previously voided expense report with no accounting impact may show a status of Paid in Full and still appear in approval lists. Opening such an expense report for editing and re-saving without making changes will automatically update the status to Void and remove the expense report from approval lists.

## Giving an Employee Access to Expense Reporting

To permit an employee access to expense reports, the Expense Reports feature must be enabled.

Next, create an employee record for the person, and assign them the Employee Center role. For more information on adding employee records, see [Adding an Employee](#).

### To create an employee record with access to the Employee Center:

1. Go to Lists > Employees > Employees > New.
  2. When the Employee page appears, fill out the appropriate information.  
Required fields have an asterisk.  
Be sure you enter the employee's email address, as it is required for login.
  3. Click the **Access** subtab.
  4. Check the **Give Access** box.
  5. If you want NetSuite to send an automatic email message notifying this employee of access privileges to NetSuite, check the **Send Notification Email** box.  
This email explains login procedures. However, it does not contain the employee's password. You need to communicate this information to the employee.
  6. In the **Password** field, enter a password with which the employee can log in.
  7. In the **Confirm Password** field, reenter the password.
  8. Check the **Require Password Change on Next Login** box to force this employee to immediately change their password upon their next login to NetSuite.  
Requiring this action protects your account from unauthorized access using generic passwords and prepares your account for an audit.
-  **Important:** The **Require Password Change on Next Login** box never appears as checked. When you check this box and save the record, an internal flag is set. When the password change occurs, the flag is cleared. If you later check the box again and resave the record, the internal flag is reset to require another password change.
9. On the **Roles** subtab in the **Role** column, select the **Employee Center** role.
  10. Click **Add** to assign the employee this role.
  11. Repeat steps 9 and 10 for each role you want to assign to this employee.
  12. Click **Save**.

Next, direct your employee to go to [www.netsuite.com](http://www.netsuite.com) and log in with this information:

- **Email** – the email address you entered on the employee's record
- **Password** – the password you assigned on the employee's record

Employees are permitted to change their login information and set their own preferences.

For expense reports, Employee Center access enables employees to:

- Enter their own expense reports
- View and edit their own unapproved expense reports
- View their own approved expense reports
- Approve expense reports of their subordinates

Employees who are designated as a supervisor or expense approver for other employees also have access to expense reports for these employees.

For more information on the Employee Center, see [About the Employee Center Role](#).

## Entering an Expense Report

You can enter an expense report to record expenditures and track information about the expense. Expense reports are available only for active employees.

Usually, employees enter expense reports when logged in with the Employee Center role. Employees can enter expenses when logged in with a role other than Employee Center if they have the Create level of the Expense Reports permission. However, when approval routing is set up, all expense reports must be entered through the Employee Center to maintain the hierarchy of approval routing.

For step-by-step procedures for entering an expense report, see the following:

- [Entering an Expense Report in the Employee Center](#)
- [Entering an Expense Report with a Role other than Employee Center](#)

**Important:** If you use NetSuite OneWorld and you are entering intercompany expenses, and you use classes, departments, or locations to classify transactions, you must determine a strategy for using classifications on intercompany expense transactions. Best practice is to omit them. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

## Entering an Expense Report in the Employee Center

**To enter an expense report when logged in with the Employee Center role:**

1. On the Employee Center Home page, in the **Home Links** portlet, click the **Enter Expense Reports** link.

If you use NetSuite OneWorld, notice that the **Subsidiary** field is automatically populated with your subsidiary.

2. NetSuite inserts today's date as the date of this expense report. You can optionally enter another date.

The **Expenses Total and Amount** field values are calculated based on the amounts entered for expense line items.

A summary box in the upper corner of the entry form displays totals for the transaction. The summary box includes real-time totals for expenses, non-reimbursable expenses, reimbursable expenses, any advances to apply, and the total reimbursable amount.

3. Enter an advance that should be applied to any reimbursement for these expenses.
4. Enter the purpose of these expenses.
5. For accounts with the Multiple Currencies feature enabled, check the **Use Multi Currency** box to show the Foreign Amount, Currency, and Exchange Rate fields for each line item. These fields enable the entry of expenses in foreign currencies.

This box is checked by default if you have enabled the **Use Multicurrency Expense Reports** preference on the General subtab at Home > Set Preferences. You can clear the box to hide Multi Currency fields on individual expense reports. Any expenses entered when Multi Currency fields are hidden are automatically saved in the base currency.

**Important:** The rates and converted amounts displayed on expense lines are provided as approximations only. Actual reimbursement amounts will be based on rates at the time of reimbursement.

6. If your company tracks them, review the default values entered for **Department**, **Class**, and **Location** to edit as necessary.

**Note:** Any department, class, or location selected in the body of the expense report does not automatically transfer to the line item fields for each expense. For this information to appear on the GL Impact for each line item you must select the appropriate information for each line item. You can also customize your forms with a custom script to automate this process. For more information, see the help topic [Enhancing NetSuite Forms with User Event Scripts](#).

If you are entering intercompany expenses and you select a department, class, or location that is not available to the subsidiary associated with the selected customer, an attempt to generate intercompany adjustments for the expenses will result in errors.

7. On the **Expenses** subtab, complete line items for expenses:

- a. The **Ref No.** field is automatically populated with 1 for the first line item on this expense report. You may update this number and each new line item will use the next successive number. Line item reference numbers are helpful when referencing receipts and individual expenses.

**Note:** If the Combine Detail Items on Expense Reports preference is enabled at Setup > Accounting > Accounting Preferences > Time & Expenses, line items on expense reports are not always listed in the order they are entered. They are regrouped by category. Line items may be listed out of order depending on the assigned category. For more information, see the help topic [Expenses](#).

- b. In the **Date** column, enter the actual date the expense was incurred.
- c. Select an expense category.

If you use NetSuite OneWorld, it is recommended that you set up expense categories linked to expense accounts that are available to all subsidiaries, for use in intercompany expense transactions. Users cannot save expense lines unless they contain expense categories available to both the employee subsidiary and customer subsidiary. See the help topic [Enabling Intercompany Time and Expenses](#).

- d. If you selected a category that requires a rate, quantity and rate fields appear. Enter the quantity for this expense.
- e. If a rate is not automatically populated, enter the rate for this expense category. The amount is automatically calculated from the rate and quantity.

**Note:** If you use multi-currencies, the foreign amount field is used to calculate expense report totals.

- f. If this expense was incurred in a foreign currency, select the currency, and enter the foreign currency amount.

If you intend to do system-generated adjustments for intercompany expenses, be aware that the currency used for those adjustments is always the base currency of the employee's subsidiary and may not match the currency recorded here. For more information, see the help topic [Creating Intercompany Adjustments for Time and Expenses](#).

- g. If it is not automatically calculated, enter the exchange rate applicable for this expense. (Be aware that any automatically calculated rate is provided as an approximation. The rate at the time of reimbursement is used to calculate the actual reimbursement amount.)
- h. In the **Amount** column, enter the amount of the expense.

Note that if you entered a foreign currency amount for this expense, the expense is automatically converted to your base currency amount in the **Amount** column. This

amount is provided as an approximation and may not match the actual reimbursement amount that will be calculated based on the exchange rate at the time of reimbursement. If this expense required a rate, the amount is calculated after a quantity and rate are entered.

- i. Optionally, you can enter a memo, department, class, or location to apply only to this line item.

If you are entering an intercompany expense and you select a department, class, or location that is not available to the subsidiary associated with the selected customer, an attempt to generate an intercompany adjustment for the expense will result in an error.

- j. If this item is billable to a customer or project, select it from the **Customer** list and check the **Billable** box.

If you use NetSuite OneWorld, the **Intercompany Time and Expense** feature and the related **Intercompany Expenses** accounting preference determine whether you can select a customer or project with a subsidiary different from yours. If the feature is not enabled, or if the preference is set to **Disallow**, you cannot enter intercompany expenses. Instead, you can select only those customers or projects with the same subsidiary to which you are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

- k. You can attach a receipt to each line item. In the **Attach File** column, select **List** to select your receipt from the **File Cabinet** or **New** to upload a new receipt. You can attach the same receipt to multiple line items.
- l. If the receipt for this item is being provided, check the **Receipt** box.
- m. If this item is not reimbursable, check the **Non-reimbursable** box. For details about this setting, see [Non-Reimbursable Expenses](#).
- n. Click **Add**.

8. Continue adding expense line items.

 **Note:** Similar line items on expense reports may be combined if your company has enabled the Combine Detail Items on Expense Reports preference. For more information, see the help topic [Projects Accounting Preferences](#).

9. When you have finished, save the expense report.

You have the following choices:

- **Submit, Submit & New, or Submit & Print** – to save the report and identify it as complete after you have entered all information.  
After an expense report is marked complete, you can no longer make changes to it.
- **Complete Later** – to save an incomplete form without submitting it. Information on the form is saved, but the form is not submitted for approval.

 **Important:** Only expense reports that are submitted as complete enter the queue for supervisor or accounting approval.

## Entering an Expense Report with a Role other than Employee Center

Expense reports can be entered by employees when logged in with roles other than the Employee Center. This gives employees the ease of using a single role to handle all of their business tasks. It also enables employees to enter expense reports on behalf of another employee if they have the necessary permissions.

## To enter an expense report when logged in with a role other than Employee Center:

1. Go to Transactions > Employees > Enter Expense Reports.
  2. Select a form to use.
  3. In the **Exp. Rept. #** field, NetSuite increases the largest expense report number by one.  
If you wish, you can type another number. The next expense number will revert to the standard pattern. You can enter a maximum of 45 characters in this field.
  4. Select the employee who incurred these expenses.  
If you use NetSuite OneWorld, notice that the **Subsidiary** field is automatically populated with the subsidiary associated with the employee.
  5. Select an account for this expense. This field is only available if you have checked the **Accounting Approval** box on this form or you are editing a previously approved expense report.  
The **Expenses and Total Amount** field values are calculated based on the amounts entered for expense line items.  
A summary box in the upper corner of the entry form displays totals for the transaction. The summary box includes real-time totals for expenses, non-reimbursable expenses, reimbursable expenses, any advances to apply, and the total reimbursable amount.
  6. Enter any advance that should be applied to any reimbursement for these expenses.
  7. Enter the purpose of this expense.
  8. NetSuite inserts today's date as the date of this expense report. You can optionally enter another date.  
Note that a posting period based on the current date is displayed. This period is subject to change until accounting approval of the expense report. If approval occurs after this displayed period has closed, the expense report is posted to the first open period.
  9. If available, enter the due date of the expense report.
  10. Review the setting for the **Complete** box, and clear it if you intend to make changes to this expense report later.  
Only complete reports are submitted for approval and processing. Be aware that after an expense report is marked complete, you can no longer make changes to it.
  11. If you have the appropriate authority, check the **Supervisor Approval**, **Accounting Approval**, or both boxes.
-  **Note:** If you have multiple payable accounts, after the **Account Approval** box has been checked the **Account** field automatically populates with the default payable account. You may change this account if necessary. To set the default payable account, go to Setup > Accounting > Accounting Preferences. Click the **Time & Expenses** subtab. In the **Default Payable Account for Expense Reports** field, select a payable account. Click **Save**.
12. On the **Expenses** subtab, for accounts with the Multiple Currencies feature enabled, check the **Use Multi Currency** box to show the **Foreign Amount**, **Currency**, and **Exchange Rate** fields for each line item. These fields enable the entry of expenses in foreign currencies.  
This box is checked by default if you have enabled the **Use Multicurrency Expense Reports** preference on the General subtab at Home > Set Preferences. You can clear the box to hide Multi Currency fields on individual expense reports. Any expenses entered when Multi Currency fields are hidden are automatically saved in the base currency.
-  **Important:** The rates and converted amounts displayed on expense lines are provided as approximations only. Actual reimbursement amounts will be based on rates at the time of reimbursement.
13. On the **Expenses** subtab, complete line items for expenses:

- a. The **Ref No.** field is automatically populated with 1 for the first line item on this expense report. You may update this number and each new line item will use the next successive number. Line item reference numbers are helpful when referencing receipts and individual expenses.

 **Note:** If the Combine Detail Items on Expense Reports preference is enabled at Setup > Accounting > Accounting Preferences > Time & Expenses, line items on expense reports are not always listed in the order they are entered. They are regrouped by category. Line items may be listed out of order depending on the assigned category. For more information, see the help topic [Expenses](#).

- b. In the **Date** column, enter the actual date the expense was incurred.
- c. Select an expense category.

If you use NetSuite OneWorld, it is recommended that you set up expense categories linked to expense accounts that are available to all subsidiaries, for use in intercompany expense transactions. Users cannot save expense lines unless they contain expense categories available to both the employee subsidiary and customer subsidiary. See the help topic [Enabling Intercompany Time and Expenses](#).

- d. If you selected a category that requires a rate, quantity and rate fields appear. Enter the quantity for this expense.
- e. If a rate is not automatically populated, enter the rate for this expense category. The amount is automatically calculated from the rate and quantity.

 **Note:** If you use multi-currencies, the foreign amount field is used to calculate expense report totals.

- f. If this expense was incurred in a foreign currency, select the currency, and enter the foreign currency amount.

If you intend to do system-generated adjustments for intercompany expenses, be aware that the currency used for those adjustments is always the base currency of the employee's subsidiary and may not match the currency recorded here. For more information, see the help topic [Creating Intercompany Adjustments for Time and Expenses](#).

- g. If it is not automatically calculated, enter the exchange rate applicable for this expense. (Be aware that any automatically calculated rate is provided as an approximation. The rate at the time of reimbursement is used to calculate the actual reimbursement amount.)
- h. In the **Amount** column, enter the amount of the expense.

Note that if you entered a foreign currency amount for this expense, the expense is automatically converted to your base currency amount in the **Amount** column. This amount is provided as an approximation and may not match the actual reimbursement amount that will be calculated based on the exchange rate at the time of reimbursement.

If this expense required a rate, the amount is calculated a quantity and rate are entered.

- i. Optionally, you can enter a memo, department, class, or location to apply only to this line item.

If you are entering an intercompany expense and you select a department, class, or location that is not available to the subsidiary associated with the selected customer, an attempt to generate an intercompany adjustment for the expense will result in an error.

- j. If this item is billable to a customer or project, select it from the **Customer** list and check the **Billable** box.

**Note:** If you use NetSuite OneWorld and you have shared customer records with multiple subsidiaries, you can choose any customer that is assigned to the default subsidiary. For information about sharing customer records with multiple subsidiaries, see the help topic [Assigning Subsidiaries to a Customer](#).

If you use NetSuite OneWorld, the **Intercompany Time and Expense** feature and the related **Intercompany Expenses** accounting preference determine whether you can select a customer or project with a subsidiary different from yours. If the feature is not enabled, or if the preference is set to **Disallow**, you cannot enter intercompany expenses. Instead, you can select only those customers or projects with the same subsidiary to which you are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

- k. You can attach a receipt to each line item. In the **Attach File** column, select **List** to select your receipt from the **File Cabinet** or **New** to upload a new receipt. You can attach the same receipt to multiple line items.
  - l. If the receipt for this item is being provided, check the **Receipt** box.
  - m. If this item is not reimbursable, check the **Non-reimbursable** box. For details about this setting, see [Non-Reimbursable Expenses](#).
  - n. Click **Add**.
14. Continue adding expense line items.

**Note:** Similar line items on expense reports may be combined if your company has enabled the Combine Detail Items on Expense Reports preference. For more information, see the help topic [Projects Accounting Preferences](#).

15. When you have finished, save the expense report.

**Important:** Only expense reports that are submitted as complete enter the queue for supervisor or accounting approval.

## Deleting an Expense Report from the Expense Reports List

You can use the list of expense reports to delete an individual expense report record.

### To delete an expense report from the list:

1. Go to Transactions > Employees > Enter Expense Reports > List.
2. Click **Edit** next to an expense report you want to delete.
3. On the Edit Expense Report page, under **Actions**, click **Delete**.
4. At the prompt to confirm the action, click **OK**.

## Rejecting an Expense Report from the Expense Reports List

You can use the list of expense reports to reject an individual expense report record.

### To reject an expense report from the list:

1. Go to Transactions > Employees > Enter Expense Reports > List.
2. Click **Edit** next to an expense report you want to reject.
3. On the Edit Expense Report page, click **Reject**.
4. On the Expense Report Rejection Notice page, enter a reason for the rejection in the **Your Message** field, and then click **Save**.

On the Expense Report page, under **Actions**, you can create a new expense report, show any expense activity, and view the GL impact of this expense.

After an expense report has been rejected, it can be edited and resubmitted.

## Non-Reimbursable Expenses

When entering an expense report, you can choose to mark a line item as Non-reimbursable. This function may be useful when an employee is required to enter an expense receipt but should not be reimbursed for the amount. This may be necessary if employee expenses are paid using a third party. For example, an employee may be required to enter an expense report with a receipt for a meal to bill the amount to a client. Because the employee used a company credit card to pay for the meal, the expensed amount should not be reimbursed to the employee. Expenses that are paid for with a corporate credit card would be marked as non-reimbursable if the credit card bill is to be paid directly by the company.

To mark an expense as non-reimbursable, on the Expenses subtab of the expense report, check the box in the Non-reimbursable column.

REF NO.	DATE	CATEGORY	AMOUNT	MEMO	DEPARTMENT	CLASS	CUSTOMER	BILLABLE	ATTACH FILE	RECEIPT	NON-REIMBURSABLE
2	10/2/2006	Cellular Phone	46.29		Service					Yes	<input type="checkbox"/>
3	10/6/2006	Meals & Entertainment	89.00		Service						<input checked="" type="checkbox"/>

The employee can enter one line on the expense report for the meal and mark it as both Billable and Non-reimbursable. For any line marked Non-reimbursable, the employee will not be reimbursed for the amount on that line.

Expenses marked as non-reimbursable are shown on expense reports and expense report receipts, but they are not payable to the employee and are not included in the amount due on expense reports.

REF NO.	DATE	CATEGORY	AMOUNT	MEMO	DEPARTMENT	CLASS	CUSTOMER	BILLABLE	ATTACH FILE	RECEIPT	NON-REIMBURSABLE
1	6/10/2014	Meals & Entertainment	125.00		Service						Yes

A non-reimbursable expense has no general ledger impact. An expense marked as non-reimbursable will have both a debit and credit entry for the associated account canceling out any impact to your ledger accounts.

		Return to Expense Report #2007					
  		Total: 2					
ACCOUNT	AMOUNT (DEBIT)	AMOUNT (CREDIT)	POSTING	MEMO	NAME	DEPARTMENT	CLASS
6120 Meals & Entertainment	125.00		Yes	Meals & Entertainment		Service	
6120 Meals & Entertainment		125.00	Yes	Meals & Entertainment		Service	

When the expense report is printed, amounts are categorized as Reimbursable or Non-reimbursable and subtotaled for each.

Wolfe Electronics		Expense Report	
Date	6/10/2014	Exp. Rept. #	2007
Employee	Brad M Sparling	From	6/10/2014

The Non-reimbursable box can be hidden by customizing the form. The box is set to show on the form by default.

## Reviewing Expense Reports

You can use the list of expense reports to review status, print or export expense report data, or to access individual expense report records for viewing and editing.

### To review expense reports:

- To get to the list of expense reports:
  - In the Employee Center Home Links portlet, click the **View & Edit Expense Reports** link.
  - If you are logged in with a role that has the **Expense Reports** permission, go to Transactions > Employees > Enter Expense Reports > List.
- You can do the following from the Expense Reports list:
  - Click a **View** link to view an expense report record.
  - Click an **Edit** link to make changes to or delete an expense report record.

- Click a **Print** link to print a single expense report record.
- Click an **Account** link to view the account register.
- Select from the dropdowns to filter the expense report records that are displayed in the list.
- Click **New** to create a new expense report.
- Click **Print** to print the entire list of expense reports.
- Click **Export** to export expense report list data to a CSV, Excel, or PDF file.
- Click **Customize View** to change the columns displayed in the list. See the help topic [Customizing List Views](#).

 **Note:** If you customize the expense report list view to include a Currency column, be aware that the listed currency values correspond to base currencies for employees and may not match the actual currencies in the expense reports.

## Giving Accounting Approval for Expense Reports

Expense reports have no accounting impact until they are approved by someone with accounting authority. When reports entered, their totals remain in an unapproved non-posting account.

By default, an expense report requires approval by the employee's immediate supervisor before being sent for accounting approval. If approval routing is enabled and set up, a more complex approval hierarchy is followed. See the help topic [Approval Routing](#).

When an expense report receives accounting approval, a bill is automatically created and its amount is reflected on your books. The expense report is posted in the earliest open period, which may not be the same as the period when the expense report was entered.

The following three conditions must be met for a role to be able to give accounting approval of an expense report:

- Use one of the following centers:
  - Executive Center
  - E-Commerce Management Center
  - Marketing Center
  - Classic Center
  - Support Center
  - Shipping Center
  - Sales Center
  - Project Center
  - Accounting Center
  - Engineering Center
- Expense Report permission set to Edit or Full
- Restrict Time and Expense preference is set to False

You can customize an existing role or create a new role to give access to accounting approval permissions. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

If an expense report is rejected by accounting, it can be edited by the employee and resubmitted for approval by the employee's immediate supervisor before being routed to accounting for approval.

Expense reports that require accounting approval can be accessed in two different places:

- Unapproved Expense Reports Register - See [Approving Expense Reports from the Register](#).
- Expense Reports List - See [Approving Expense Reports from the Expense Reports List](#).

Companies with multiple payable accounts can set a company-wide default payable account for expense reports. Setting a default account enables more consistent expense reporting across your company.

To set the default payable account, go to Setup > Accounting > Accounting Preferences. Click the Time & Expenses subtab. In the Default Payable Account for Expense Reports field, select a payable account. Click Save.

**Note:** In OneWorld accounts, the preference is set by subsidiary. Go to Setup > Company > Subsidiaries. Click Edit next to the subsidiary you want to update. Click the Preferences subtab. In the Default Payable Account for Expense Reports field, select a payable account. Click Save.

**Note:** If you want to see the general ledger impact of an expense report before you approve it, view the expense report record and under Actions, select GL Impact.

## Approving Expense Reports from the Register

### To approve expense reports from the Unapproved Expense Reports Register:

1. Go to Transactions > Employees > Enter Expense Reports.
2. In the More menu, click the **Approve Expense Reports** link.
3. Click the date next to the expense report you want to approve.
4. If the report is complete, click **Approve** in the middle of the form.

If you want to reject the report, click **Reject**. When the email form appears, you can send a message to your employee about the expense report. Complete the email message, and then click **Save**.

If multiple payable accounts exist and a default account is not selected at Setup > Accounting > Accounting Preferences > Time & Expenses, you cannot automatically approve the expense report from the register. You must edit the expense report and manually select a payable account.

## Approving Expense Reports from the Expense Reports List

### To approve expense reports from the list:

1. Go to Transactions > Employees > Enter Expense Reports > List.
2. Click **Edit** next to an expense report with a status of **Pending Accounting Approval**.
3. On the expense report, check the **Accounting Approval** box.
4. If multiple accounts payable accounts are available and a default account has not been set, select a payable account in the **Account** field. (This field does not display if there is only one accounts payable account.)
5. Click **Save**.

**Note:** If you customize the expense report list view to include a **Currency** column, be aware that the listed currency values correspond to base currencies for employees and may not match the actual currencies in the expense reports.

## Understanding Expense Categories

Expense categories are used to group expenses. Popular categories include transportation, lodging, mileage, and entertainment. Each expense category is linked to an account. When an employee enters an expense report, he or she selects a category for each expense, and the expense automatically posts to the associated expense account. Note that new expense categories cannot be created at the time an expense report is entered.

If you use NetSuite OneWorld, be aware that an expense category is available to only those subsidiaries assigned to the account linked with the expense category. If you want to enable intercompany expense transactions, it is recommended that you set up expense categories linked to expense accounts that are available to all subsidiaries, for use in these transactions. For intercompany expense transactions, users cannot save expense lines unless they contain expense categories available to both the employee subsidiary and customer subsidiary.

To enter expense categories, go to Setup > Accounting > Setup Tasks > Expense Categories > New. For more information, see the help topic [Creating an Expense Category](#).

## Paying Expenses on Employee Paychecks with NetSuite Payroll

You can choose to pay employee expenses on their regular paychecks instead of paying them through accounts payable. When you use NetSuite Payroll to pay expenses, you can only pay the full amount of the expense report.

To pay expenses on an employee's paychecks using NetSuite Payroll, you must complete the following tasks:

1. [Enabling the Pay Expenses on Paychecks Preference](#)
2. [Creating an Earning:Expense Payroll Item](#)
3. [Adding an Expense Payroll Item to an Employee Record](#)
4. [Enabling the Pay Expenses Option for Payroll](#)

**Note:** You must pay expenses by accounts payable if you want to do either of the following: partially pay an expense report, or pay an expense report on a date different than the regular pay date. To pay expenses by accounts payable, go to Transactions > Pay Bills.

## Enabling the Pay Expenses on Paychecks Preference

To enable the [Pay Expenses On Paychecks](#) preference:

1. Go to Setup > Payroll > Set Up Payroll.
2. Check the **Pay Expenses on Paychecks** box.
3. Click **Save**.

After you enable the preference, you need to create a new payroll item.

## Creating an Earning:Expense Payroll Item

### To create or edit an Earning:Expense payroll item:

1. Go to Lists > Employees > Payroll Items > New.  
If you want to edit an existing payroll item, check **Show Inactives** and click **Edit** next to the item you want to set up. After you edit the item record, skip to step 8.
2. Click the **Earning:Expense** link.
3. On the Payroll Expense Item page, if you have a NetSuite OneWorld account, select a subsidiary from the **Subsidiary** dropdown list.
4. Enter a name for the earning item.
5. The **Type** field displays the payroll item type. This type determines how this new earning will be taxed and reported.
6. Select a **Report Section** from the dropdown list to specify which section of payroll reports should display this amount.
7. Check the **Inactive** check box to prevent the use of this earning item. Clear the check box to make it available.
8. Click **Save**.

Earning:Expense items do not affect an employee's gross pay. They are added to the net pay. In addition, expense items do not appear on the employee's W-2.

Next, you need to add the expense payroll item to the employee record.

## Adding an Expense Payroll Item to an Employee Record

### To add an expense payroll item to an employee record:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee name.
3. On the employee record click the **Payroll** subtab.
4. Click the **Earnings** subtab.
5. In the **Earnings** field, select the expense payroll item.
6. Click **Add**.
7. Click **Save**.

For more information, see the help topic [Entering General Payroll Information for an Employee](#).

Now you can pay approved expense reports on employee paychecks when payroll is processed.

## Enabling the Pay Expenses Option for Payroll

### To pay expenses on checks in a payroll:

1. Go to Transactions > Employees > Create Payroll.
2. On the Payroll Run page, verify that the **Pay Expenses** box is checked.
3. Check the box in the **Pay** column next to each employee you want to pay.
4. Click **Calculate**.

5. On the Payroll batch page, click **View** next to a paycheck.
6. Click the **Expenses** subtab.
7. Verify that the expense amounts are correct and that the box is checked in the **Pay** column next to all expenses you are paying.
8. Click **Accept**.

If you use the NetSuite Payroll feature, direct deposit is automatically enabled. You can use direct deposit to pay employee expenses by transferring funds into their bank account. For more information, see the help topic [Setting Up Employees for Direct Deposit](#).

## Giving an Employee Access to Purchase Requests

Employees with access to purchase requests can enter requests to purchase items, material or services from vendors. After requests are approved, they turn into purchase orders.

To give an employee access to purchase requests, first, someone with permission to access the Enable Features page must enable the Purchase Requests feature. Next, the employee record must be set up to give the employee access to the Employee Center.

### To enable the Purchase Requests feature:

1. Go to Setup > Company > Enable Features.
2. Click the **Employees** subtab.
3. Check the **Purchase Requests** box.
4. If you want purchase requests to be approved by a supervisor, also check the **Approval Routing** box.
5. Click **Save**.

Then, you must give your employees access to the Employee Center in your account. If you have not already set up employee records, see [Adding an Employee](#).

### To set up access on employee records:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the name of the employee to which you want to give access.
3. On the Employee record, verify the employee's email address, as it is required for login.
4. Click the **Access** subtab.
5. Check the **Give Access** box.
6. If you want NetSuite to send an automatic email message notifying this employee of access privileges to NetSuite, check the **Send Notification Email** box.  
This email explains login procedures. However, it does not contain the employee's password. You need to communicate this information to the employee.
7. In the **Password** field, enter a password with which the employee can log in.
8. In the **Confirm Password** field, reenter the password.
9. Check the **Require Password Change on Next Login** box to force this employee to change their password immediately upon their next login to NetSuite.  
Requiring this action protects your account from unauthorized access using generic passwords and prepares your account for an audit.

**Important:** The **Require Password Change on Next Login** box never appears as checked. When you check this box and save the record, an internal flag is set. When the password change occurs, the flag is cleared. If you later check the box again and resave the record, the internal flag is reset to require another password change.

10. On the **Roles** subtab, in the **Role** column, select the **Employee Center** role.
11. Click **Add** to assign the employee this role.
12. Repeat steps 10 and 11 for each role you want to assign to this employee.
13. Click **Save**.

Next, direct your employee to go to [www.netsuite.com](http://www.netsuite.com) and log in with this information:

- **Email** – the email address you entered on the employee's record
- **Password** – the password you assigned on the employee's record

After employees log in to NetSuite, they can enter purchase requests and view and edit their purchase requests and purchase orders.

If you designate a particular employee as a supervisor or purchase approver for other employees, this person can approve or reject these employees' purchase requests.

## Notifying a Supervisor or Approver About Required Approvals

You can notify supervisors or approvers by email when they need to approve expense reports, time entries, or purchase requests.

### To notify supervisors of required approvals:

1. Go to Setup > Accounting > Accounting Preferences and click the **Time & Expenses** subtab.
2. Check the **Automatically Notify Supervisor** box.
3. Click **Save**.

Now, whenever employees submit expense reports, time entries, or purchase requests, NetSuite notifies their supervisors or approvers by email. Supervisors also receive an email notification if any changes are made to an expense report prior to approval.

If the Approval Routing feature is not enabled, the employee's immediate supervisor approves an expense report, time entry, or purchase request.

**Note:** If you use custom approvals for time entries, the Automatically Notify Supervisor preference does not apply.

## Using the Approval Routing Feature

When this Approval Routing feature is enabled, an approval hierarchy can be set up with a series of designated approvers. For more information, see the help topic [Approval Routing](#).

After approval routing is set up, all expense reports, time entries, and purchase requests must be entered through the Employee Center to maintain the hierarchy of approval routing. Employees with

additional assigned roles should log in with their Employee Center role to enter expense reports, time entries, or purchase requests.

## Using SuiteFlow for Purchase Approvals

If you use SuiteFlow to process purchases using custom workflows, notifying supervisors or approvers must be part of the workflow that you create. For more information, see the help topic [Using Custom SuiteFlow Workflows for Approval Routing](#).

# Analytics and Reporting

NetSuite provides analytics, which enable you to measure and analyze company headcount, hiring, and turnover trends, as well as various employee-related reports:

- [Workforce Analytics](#)
- [Employee Reports](#)

# Workforce Analytics

- [Workforce Analytics Overview](#)
- [Working with Headcount Analysis](#)
- [Working with Turnover Analysis](#)

## Workforce Analytics Overview

 **Warning:** This feature exposes personal information about employees. NetSuite recommends that this feature is enabled only for users who require access to all employee data.

 **Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

 **Note:** The Workforce Analytics feature supports standard fields, such as hire date and termination/release date. Custom fields are not referenced in the data.

The Workforce Analytics feature gives Human Resources the tools to measure and analyze company headcount, hiring, and turnover trends. This feature compiles your data and converts it into rich HR metrics that are available through the Headcount Analysis and Turnover Analysis pages.

The Workforce Analytics feature is available to roles that have the Workforce Analytics permission. By default, this permission is automatically added to NetSuite's standard Chief People Officer (CPO) and Human Resources Generalist roles, at the View access level. You can create custom roles that include this permission. For more information, see the help topics [Customizing or Creating NetSuite Roles](#) and [NetSuite Permissions Overview](#).

The Workforce Analytics feature enables you to:

- View headcount, hire, and turnover trends in your company. For more information, see [Headcount Analysis Trend Views](#).
- Get a high-level synopsis of the employees who are leaving your company and the reasons they are leaving. For more information, see [Turnover Analysis Trend Views](#).
- Filter and segment data based on gender, termination type, employee type, employee status, class, department, location, or (with NetSuite OneWorld) subsidiary. Data can be further filtered to include subclass, subdepartment, and sublocation.
- View custom snapshot views of headcount and turnover trends, for a specific quarter. For more information, see [Headcount Analysis Snapshot Views](#) and [Turnover Analysis Snapshot Views](#).

## Working with Headcount Analysis

Headcount Analysis is used to analyze headcount, hire, and turnover trends in your company. You can analyze this data using the available headcount analysis trend and snapshot views. For details, see [Headcount Analysis Trend Views](#) and [Headcount Analysis Snapshot Views](#).

Headcount Analysis includes all active and inactive employees, on or after their hire dates. Terminated employees are excluded after their termination dates.

To access the Headcount Analysis page, go to Reports > Employees/HR > Headcount Analysis.

## Headcount Analysis Trend Views

There are two headcount analysis trend views: headcount, and hires and turnovers. These trend views analyze year-to-date headcount, hire, and turnover trends for employees in your company for each month of the selected year. To access the Headcount Analysis trend views, go to Reports > Employees/HR > Headcount Analysis. At the top of the page, click the year that you want to view.

### 1 Yearly trend views

- 2 Segment data by gender, class, department, location, or (with NetSuite OneWorld) subsidiary. If applicable, class, department, and location can be further segmented by subclass, subdepartment, and sublocation.
- 3 Data shown on the trend views matches the filters you select.
- 4 The Headcount Trend view includes all non-terminated employees to the end of each calendar month of the selected year, for the selected segments. Hover over each bar to see the total headcount in a particular month.
- 5 The Hires and Turnovers Trend view includes all employees with hire and termination dates during each calendar month of the selected year, for the selected segments. Hover over each bar to see the total headcount for hires and terminations in a particular month.
- 6 This table reflects the data from the trend views. The left side shows the total employee headcount at the end of each month for the selected year, and the number and percentage of hires and terminations. The right side shows the headcount data for the selected segments and filters. For example, if **Location (All)** is selected, the total headcount for each location is shown. Click **Copy to Clipboard** to copy and paste the data into other analysis tools.

## Headcount Analysis Snapshot Views

There are two headcount analysis snapshot views: hires and turnovers, and gender. The headcount analysis snapshot views allow you to analyze quarterly headcount trends. To access the headcount analysis snapshot views, go to Reports > Employees/HR > Headcount Analysis. At the top of the page, click the quarter that you want to view.

**Note:** Each quarter represents a completed quarter and not a quarter-to-date.

- 1 Quarterly snapshot views.
- 2 Segment data by gender, tenure, class, department, location, or (with NetSuite OneWorld) subsidiary. If applicable, class, department, and location can be further segmented by subclass, subdepartment, and sublocation.

**Note:** When segmenting by tenure, the start of an employee's tenure is the **Hire Date** set on the employee record. However, if the Time-Off Management feature is enabled, the date set in **Start Date for Time-Off Calculations** is used instead.

3 Data shown on the snapshot views matches the filters you select.

4 The Hires and Turnovers Snapshot view lets you compare the hiring and turnover rates between the different segments in your company. The left side shows the employee headcount, as of the last day in the period, for the selected segments. The right side shows the number of employees hired and terminated from the start of the period to the end of the period, for the selected segments.

5 Switch between the different snapshots.

6 This table reflects the data from the snapshot views. Click **Copy to Clipboard** to copy and paste the data into other analysis tools.

7 The Gender Snapshot view shows the numbers and percentages of employee gender distribution as of the last day in the period, for the selected segments. The left side shows the total headcount, and the right side shows male and female headcount percentages.

## Working with Turnover Analysis

Turnover Analysis is used to analyze the employees who are leaving the company and the reasons they are leaving. With this key visualization, HR can identify challenges and use that information to improve employee experience and plan strategies. You can analyze this data using the available turnover analysis trend and snapshot views. For details, see [Turnover Analysis Trend Views](#) and [Turnover Analysis Snapshot Views](#).

Turnover analysis includes all active and inactive employees with a termination/release date for each month of the current and previous year. Employees who do not have a hire date entered on their employee record are not included.

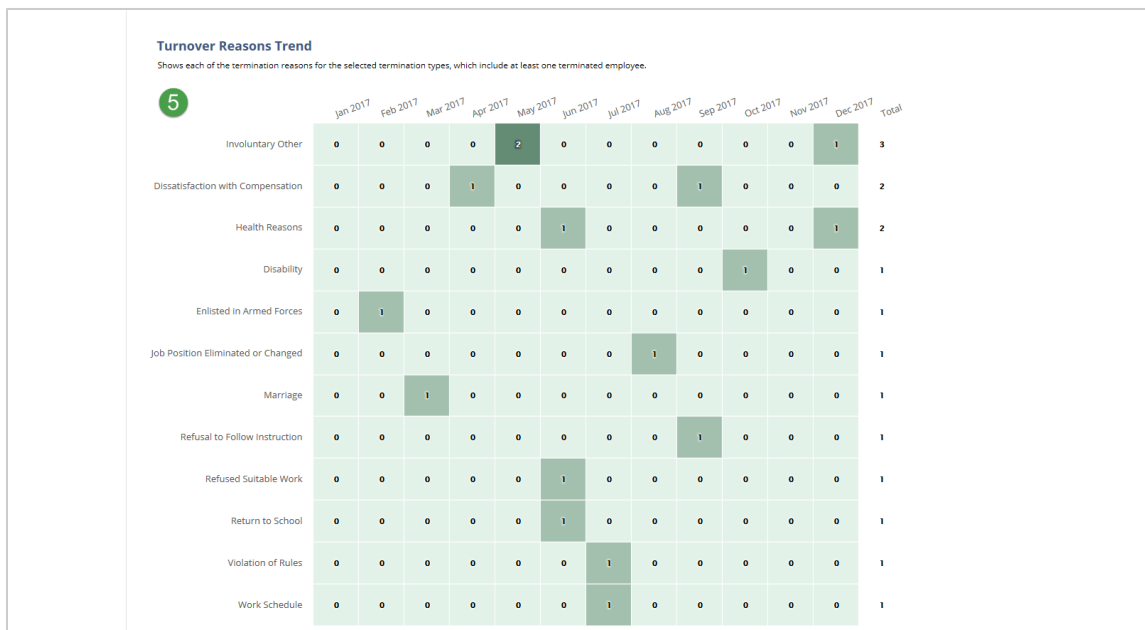

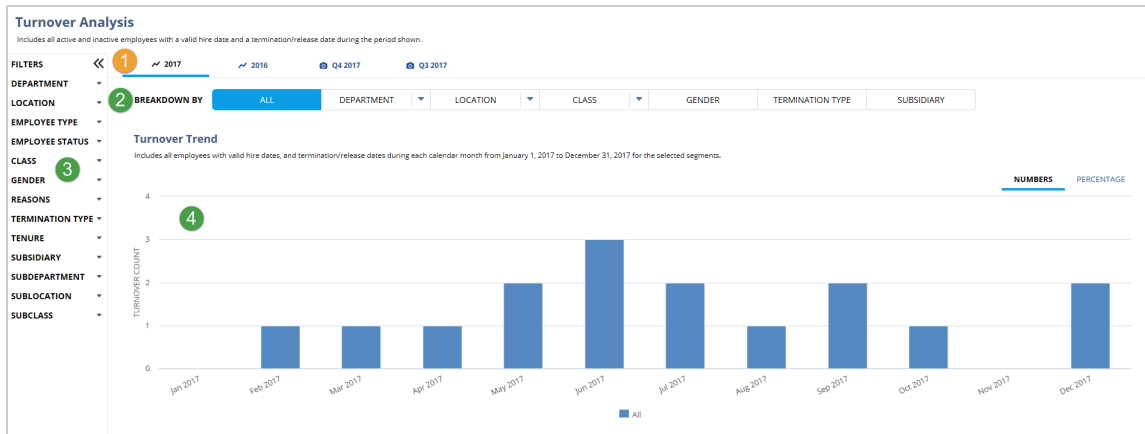

To access the Turnover Analysis page, go to Reports > Employees/HR > Turnover Analysis.

**Note:** To use Turnover Analysis, make sure your account has the Termination Reasons Tracking feature enabled. For more information, see [Termination Reason Tracking](#).

## Turnover Analysis Trend Views

There are two turnover analysis trend views: turnover trend and turnover reasons trend. These trend views analyze year-to-date headcount, hire, and turnover trends for employees in your company, for each month of the selected year.

To access the Turnover Analysis trend views, go to Reports > Employees/HR > Turnover Analysis. At the top of the page, click the year that you want to view.

1 Yearly trend views.

2 Segment data by gender, termination type, class, department, location, or (with NetSuite OneWorld) subsidiary. If applicable, class, department, and location can be further segmented by subclass, subdepartment, and sublocation.

3 Data shown on the trend views matches the filters you select.

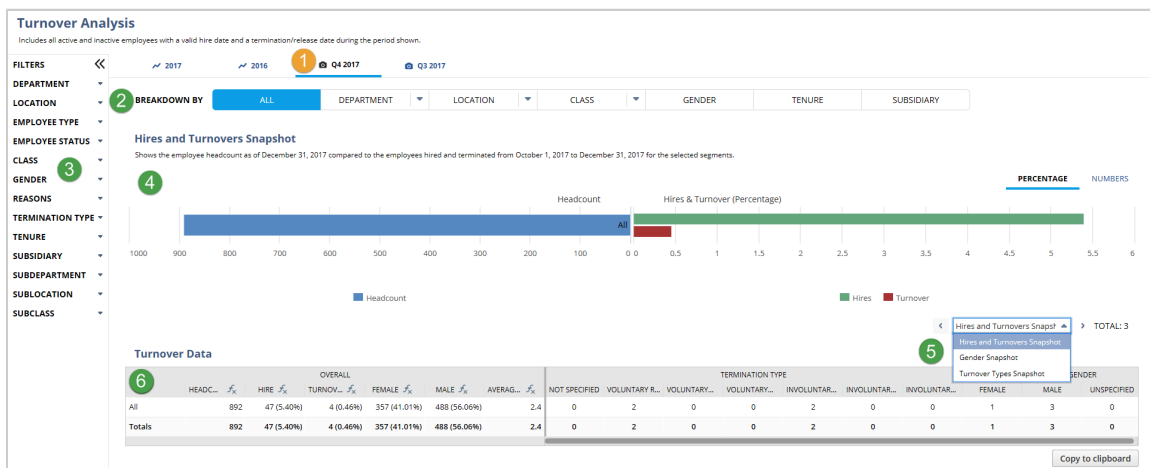

- 4 The Turnover Trend view includes all employees with termination/release dates during each calendar month of the selected year, for the selected segments. Employees with a termination date within a month contribute to the turnover count of that month. Hover over each bar to see the total turnover in a particular month.
- 5 The Turnover Reasons Trend view analyzes all the termination reasons for each selected termination type, that contains at least one terminated employee. The data is broken down for each calendar month of the selected year, for the selected segments. Rows appear in descending order with the highest turnover reason at the top.
- 6 This table reflects the data from the trend views. The left side shows the total employee headcount at the end of each month for the selected year, and the number and percentage of hires and terminations. The right side shows the headcount data for the selected segments and filters. For example, if **Location (All)** is selected, the total headcount for each location is shown. Click **Copy to Clipboard** to copy and paste the data into other analysis tools.

## Turnover Analysis Snapshot Views

There are three turnover analysis snapshot views: hires and turnovers, gender, and turnover types (voluntary, involuntary). The turnover analysis snapshot views allow you to analyze quarterly turnover trends.

To access the turnover analysis snapshot views, go to Reports > Employees/HR > Turnover Analysis. At the top of the page, click the quarter that you want to view.

**Note:** Each quarter represents a completed quarter and not a quarter-to-date.

1 Quarterly snapshot views.

2 Segment data by gender, tenure, class, department, location, or (with NetSuite OneWorld) subsidiary. If applicable, class, department, and location can be further segmented by subclass, subdepartment, and sublocation.

**Note:** When segmenting by tenure, the start of an employee's tenure is the **Hire Date** set on the employee record. However, if the Time-Off Management feature is enabled, the date set in **Start Date for Time-Off Calculations** is used instead.

3 Data shown on the snapshot views matches the filters you select.

4 The Hires and Turnovers Snapshot view for turnover analysis lets you view employee changes for a specific period. The left side shows the employee headcount as of the last day in the period, for the selected segments. This data is compared to the right side of the graph, which shows the number of employees hired and terminated from the start of the period to the end of the period, for the selected segments.

5 Toggle between the different snapshots.

6 This table reflects the data from the snapshot views. Click **Copy to Clipboard** to copy and paste the data into other analysis tools.

7 The Gender Snapshot view for turnover analysis, analyzes the turnovers in your company by gender. By comparing the gender distribution of employees in your company to the gender distribution of terminated employees, you can spot any disproportional terminations in a gender group, for the selected segments.

8 The Turnover Types Snapshot view analyzes the turnovers in your company by type, such as voluntary-regretted and involuntary-unregretted. It shows the employee headcount as of the end of the period, and compares it to the types of turnovers from the start to the end date, for the selected segments.

# Employee Reports

NetSuite provides many different kinds of employee-related reports:

- Time and Billables Reports
- Time-Off Management Reports
- Time-Off Tracking Reports
- Recruiting Reports
- Employee Change History Report
- Employee Saved Search Reports
- Customizing Employee Reports

## Time and Billables Reports

The following standard time and billables reports are available in NetSuite. Some reports are available only if you use Project Management.

- Earned Value by Project Report
- Time Entry Exceptions Report
- Time by Employee/Item/Customer Reports
  - Time by Employee Summary Report
  - Time by Employee Detail Report
  - Time by Customer Summary Report
  - Time by Customer Detail Report
  - Time by Item Summary Report
  - Time by Item Detail Report
- Current Backlog By Resource Report
- Estimated Profitability by Project Report
- Unbilled Cost by Customer Summary Report
- Unbilled Cost by Customer Detail Report
- Unbilled Time by Customer Summary Report
- Unbilled Time by Customer Detail Report

## Time-Off Management Reports

**Important:** The Time-Off Management feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Time-Off Management feature includes a variety of reporting capabilities that you can use to retrieve, present, and analyze your time-off data.

The following reports are included with the Time-Off Management feature:

- Available Time-Off Report

- [Time-Off Balance Summary Report](#)
- [Time-Off Balance Details Report](#)

If no standard report fits your needs, you can create an ad hoc report. For more information, see [Time-Off Management Ad Hoc Reports](#).

You can also customize these standard reports in the Report Builder by clicking **Customize** on the results page. For more information, see the help topics [Report Builder Interface](#) and [Report Customization](#).

## Available Time-Off Report

The standard Available Time-Off report summarizes the total number of used and scheduled time-off, the available time-off based on usage, and the time-off for the entire year across all classes, departments, locations, and subsidiaries. You can use this report to quickly see an employee's available time-off balance as of the current date.

To view the Available Time-Off report, go to Reports > Employees/HR > Available Time-Off.

This report displays the following for each employee:

- Time-Off Type
  - Annual Entitlement — The total available time-off for the current year. Includes all future accruals for the current year when the **Days Available Includes Future Accruals** box on the Time-Off Plan page is selected. For more information, see [Creating a Time-Off Plan](#).
  - Used — The amount of time-off that has been used as of the current date.
  - Scheduled — The amount of time-off that has been requested and approved, but not yet taken.
  - Available Now — Total remaining time-off for the current year.

To customize this report and display it in the Report Builder, click **Customize**. For more information, see the help topic [Report Customization](#).

The following selections are included for customization on the Available Time-Off report:

- Available Time-Off:
  - Annual Entitlement — The employee's total time-off for the current year. This is based on the number of days or hours the employee is entitled to for the particular time-off type.
  - Available Now — The employee's remaining time-off for the current year.
  - Scheduled — The amount of time-off, in hours, that has been requested and approved, but not yet taken.
  - Used — The amount of time-off, in hours, that has been used for the current year.
- Time-Off Change Type:
  - Name — The name of the time-off change type. For example, approved time-off request, manual adjustment, or automatic accrual.
- Time-Off Type:
  - Display Name — The time-off type display name.
  - Inactive — Indicates when a time-off type is inactive.
  - Increment Unit — Indicates whether the minimum increment of time-off is in days or hours.
  - Minimum Increment — The minimum increment of time-off required.
  - Name — The name of the time-off type.

- Track Only — Indicates when a time-off type is track only.

## Time-Off Balance Summary Report

The Time-Off Balance Summary report displays the amount of time-off employees have earned up to the current date based on the rules defined in the plan assigned to them. This report is useful for accounting purposes when you need to determine an employee's available time-off balance on a specific date.

To view the Time-Off Balance Summary report, go to Reports > Employees/HR > Time-Off Balance Summary.

This report displays the following for each employee:

- Time-Off Type — The employee's name and the time-off types that are available to them.
- Carried Over — If an employee is entitled to carry over unused time from the previous year, it appears in this column.
- Earned — The number of hours that have been accrued as of the current date, for each time-off type.
- Used — The amount of used time-off for each time-off type in the plan.
- Carryover Expiry — If any carryover has expired it appears in this column.
- Balance — Displays the balance as of the current date.

**Note:** If you need to search for a balance summary between a specific date range, it is important to note that the standard report does not display year-end expiry values. To get an accurate balance summary, set the start date to January 1st and the end date to whatever date you want to view the balance to. If required, you can customize the report to include year end expiry.

To customize this report and display it in the Report Builder, click **Customize**. For more information, see the help topic [Report Customization](#).

The following selections are included for customization on the Time-Off Balance Summary report:

- Time-Off Balance Adjustments:
  - Amount (Excluding year end expiry) — Displays the balance without taking year-end expiry into account. Use this when running a report within a single year.
  - Amount (Including year end expiry) — The balance calculated includes the year-end expiry. Any positive balances at the end of the year are automatically adjusted to zero. Use this when running a report across multiple years. Also, use this in conjunction with Expired so you can see the full balance expiry at the end of the plan period and the carryover amount credit at the beginning of the plan period.
  - Carried Over — If an employee is entitled to carry over unused time from the previous year, it appears in this column.
  - Carryover Expiry — If any carryover expired it appears in this column.
  - Date Applied — The date the change was applied. Add this if you are looking to display each time off change individually.
  - Earned — The number of hours that have been accrued for the specified date range.
  - Expired — The amount of time-off that has expired at year end for the specified date range.
  - Used — The amount of used time-off for each time-off type for the specified date range.

- Time-Off Change Type:
  - Name — The name of the time-off change type. For example, approved time-off request, manual adjustment, or automatic accrual.
- Time-Off Type:
  - Display Name — The time-off type display name.
  - Inactive — Indicates when a time-off type is inactive.
  - Increment Unit — Indicates whether the minimum increment of time-off is in days or hours.
  - Minimum Increment — The minimum increment of time-off required for the time-off type.
  - Name — The name of the time-off type.
  - Track Only — Indicates when a time-off type is track only.

## Time-Off Balance Details Report

The Time-Off Balance Details report contains a complete breakdown of each employee's time-off changes. This report is useful when you need more information than what is available on the Time-Off Balance Summary report. It contains an entry for each adjustment that was made to an employee's time-off. This includes the date of the change, the type of adjustment (for example, manual increase or usage) and the type of time-off the adjustment was made to (for example, vacation time or sick leave).

To view the Time-Off Balance Details report, go to Reports > Employees/HR > Time-Off Balance Details.

This report displays the following for each employee:

- Time-Off Type — Displays the employee's name and the time-off types that are available to them.
- Date — The date the change was applied.
- Adjustment Type — Distinguishes whether the adjustment was due to regular usage or whether a manual increase or decrease was made.
- Amount — The amount of time-off that was debited or credited.
- Balance — Displays the current balance.

 **Note:** If you need to search for a balance summary between a specific date range it is important to note that the standard report does not display year-end expiry values. To get an accurate balance summary the search dates must be in complete years and start on January 1st. If required, you can customize the report to include year-end expiry.

To customize this report and display it in the Report Builder, click **Customize**. For more information, see the help topic [Report Customization](#).

The following selections are included for customization on the Time-Off Balance Summary report:

- Time-Off Balance Adjustments:
  - Amount (Including year end expiry) — The balance calculated includes the year end expiry. Any positive balances are automatically adjusted to zero on December 31st and carry over is credited back to the employee on January 1st.
  - Amount (Excluding year end expiry) — Calculates the balance without taking year end expiry into account. Use this when running a report within a single year.
  - Amount — Displays a running total of an employee's balance.
  - Carried Over — If an employee has carried over unused time-off from the previous year it appears in this column.

- Carryover Expiry — If any carryover expired it appears in this column.
- Date Applied — The date the change was applied.
- Earned — The number of hours that have been accrued as of the current date.
- Expired — The amount of time-off that has expired at year end.
- Used — The amount of used time-off for each time-off type.
- Time-Off Change Type:
  - Name — The name of the time-off change type. For example, manual adjustment or automatic accrual.
- Time-Off Type:
  - Display Name — The time-off type display name.
  - Inactive — Indicates when a time-off type is inactive.
  - Increment Unit — Indicates whether the minimum increment of time-off is in days or hours.
  - Minimum Increment — The minimum increment of time-off required for the time-off type.
  - Name — The name of the time-off type.
  - Track Only — Indicates when a time-off type is track only.

## Time-Off Tracking Reports

The Time-Off Tracking SuiteApp includes a set of saved searches that you can use as reports.

**Important:** The saved searches installed with the SuiteApp are not public. A user with the Administrator role must first customize the saved searches to define the roles that can access each saved search and their location in the Reports menu. For more information, see [Customizing Time-Off Tracking Reports](#).

You can access the following saved searches through their own menu options at Reports > Time-Off:

- [Approved Time-Off Requests Saved Search](#)
- [Pending Time-Off Requests Saved Search](#)
- [Rejected Time-Off Requests](#)
- [Upcoming Approved Time-Off \(1 Month\) Saved Search](#)
- [Time-Off Plan Assignment Saved Search](#)
- [Employees without Time-Off Plans Saved Search](#)
- [Work Calendars Saved Search](#)

You can print and export the Time-Off Tracking saved search results, permitting the information to be shared as reports. Exporting is available to Excel, CSV, and PDF. You can find the print and export icon buttons at the top of the results list. You can also use saved search email to share complete search results with other users. To use saved search email, see the help topic [Saved Search Email](#).

For more information about saved searches, see the help topic [Saved Searches](#).

### Approved Time-Off Requests Saved Search

The Approved Time-Off Requests saved search lists active employees with approved time-off requests. By default, the results are sorted alphabetically by employee name, and then by start date and time-off type.

## Pending Time-Off Requests Saved Search

The Pending Time-Off Requests saved search lists active employees with time-off requests that are pending approval. By default, the results are sorted alphabetically by employee name, and then by start date and time-off type.

## Rejected Time-Off Requests

The Rejected Time-Off Requests saved search lists active employees with rejected time-off requests. By default, the results are sorted alphabetically by employee name, and then by start date and time-off type.

## Upcoming Approved Time-Off (1 Month) Saved Search

The Upcoming Approved (1 Month) Time-Off saved search lists active employees with approved time-off requests that have start dates within the next month. By default, the results are sorted alphabetically by employee name, and then by start date and time-off type.

## Time-Off Plan Assignment Saved Search

The Time-Off Plan Assignment saved search lists the time-off plan assigned to each active employee. By default, the results are sorted alphabetically by time-off plan, job, and employee name. In the results list, you can click the **Edit** link for each employee record to update the employee's time-off plan.

## Employees without Time-Off Plans Saved Search

The Employees without Time-Off Plans saved search lists any active employees who are not assigned a time-off plan. By default, the results are sorted alphabetically by employee name. In the results list, you can click the **Edit** link for each employee record to assign the employee a time-off plan.

## Work Calendars Saved Search

The Work Calendars saved search lists work calendar assignments of active employees. By default, the results are sorted alphabetically by work calendar and employee name. In the results list, you can click the **Edit** link for each employee record to update the employee's time-off plan.

## Customizing Time-Off Tracking Reports

You can customize the following Time-Off Tracking Reports Templates to create unique saved searches:

- TEMPLATE Approved Time-Off Requests
- TEMPLATE Pending Time-Off Requests
- TEMPLATE Rejected Time-Off Requests
- TEMPLATE Upcoming Approved Time-Off (1 Month)
- TEMPLATE Time-Off Plan Assignment
- TEMPLATE Employees without Time-Off Plans
- TEMPLATE Work Calendars

### To customize a time-off tracking report template:

1. Go to Lists > Search > Saved Searches.
2. Beside the template that you want to customize, click **Edit**.
3. In the **Search Title** field, remove "TEMPLATE" from the name of the search, and enter a new name for the search if necessary.
4. In the **Audience** tab, from the **Roles** list, select the roles that should have access to the saved search.
5. If necessary, update the settings in any of the other tabs (for example, you can update search criteria in the **Criteria** tab).
6. Click **Save As**.

### To create a center category for the saved search:

Create a center category so that you can access the time-off tracking reports from menu links.

1. Go to Customization > Centers and Tabs > Center Categories > New.
2. Set the following values:
  - Set the **Label** field to **Time-Off**.
  - In the **Center Type** list, select **Classic Center**.
  - In the **Center Tab** list, select **Reports**.
3. In the table, depending on the report that was used to create the saved search, set the following values:

For each of the following reports:	Set the Link column to:	Set the Label column to:
Approved Time-Off Requests	Approved Time-Off Requests Results	Approved Time-Off Requests
Pending Time-Off Requests	Pending Time-Off Requests Results	Pending Time-Off Requests
Rejected Time-Off Requests	Rejected Time-Off Requests Results	Rejected Time-Off Requests
Upcoming Approved Time-Off (1 Month)	Upcoming Approved Time-Off (1 Month) Results	Upcoming Approved Time-Off (1 Month)
Time-Off Plan Assignment	Time-Off Plan Assignment Results	Time-Off Plan Assignment
Employees without Time-Off Plans	Employees without Time-Off Plans Results	Employees without Time-Off Plans
Work Calendars	Work Calendars Results	Work Calendars

4. Click **Save**.

You can now access the reports at Reports > Time-Off.

## Recruiting Reports

The Recruiting Reports SuiteApp provides job requisition reports that are available as NetSuite saved searches. When customized, the saved searches can be accessed from a unique Reports menu location.

## Prerequisite

Before you install the Recruiting Reports SuiteApp, go to Setup > Company > Enable Features. Click the **Employees** subtab and check the **Job Requisitions** box, under HR Information System.

## Installation

To install Recruiting Reports, go to Customization > SuiteBundler > Search & Install Bundles.

Use the following information to search for the SuiteApp:

- Bundle Name — **Recruiting Reports**
- Bundle ID — **167235**

Recruiting Reports is a managed bundle and is automatically updated whenever there are updates. These issue fixes and enhancements are available after the SuiteApp is updated in your account.

For more information about installing SuiteApps, see the help topic [Installing a Bundle](#).

## Recruiting Reports

**Important:** The saved searches installed with the SuiteApp are not public. A user with the Administrator role must first customize the saved searches to define the roles that can access each saved search and their location in the Reports menu. For more information, see [Customizing Recruiting Reports](#).

You can access the following saved searches through their own menu options at Reports > Recruiting:

- **Open Job Requisitions** — This saved search lists active job requisition records that have no close dates and with Status set to **Open**. By default, the results are sorted by target hire date and job.
- **Pending Job Requisitions** — This saved search lists active job requisition records that have no close dates and with Status set to **Pending Approval**. By default, the results are sorted by target hire date and job.
- **Closed Job Requisitions** — This saved search lists active job requisition records that have close dates and with Status set to **Closed**. By default, the results are sorted by close date and job.
- **Filled Job Requisitions** — This saved search lists active job requisition records that have Status set to **Filled**. By default, the results are sorted by target hire date and job.
- **On-Hold Job Requisitions** — This saved search lists active job requisition records that have no close dates and with Status set to **On-Hold**. By default, the results are sorted by target hire date and job.
- **Overdue Job Requisitions** — This saved search lists active job requisition records that have no close dates and with Status set to **Open**, **Pending Approval**, or **On-Hold**. By default, the results are sorted by target hire date, close date, and job.

**Note:** From the results list of any recruiting report saved search, you can view a job requisition record by clicking its **View** link or Job Requisition ID.

You can print and export the saved search results, permitting the information to be shared as reports. Exporting is available to Excel, CSV, and PDF. You can find the print and export icon buttons at the top of the results list. You can also use saved search email to share complete search results with other users. To use saved search email, see the help topic [Saved Search Email](#).

For more information about saved searches, see the help topic [Saved Searches](#).

## Customizing Recruiting Reports

You can customize the following Recruiting Reports Templates to create unique saved searches:

- TEMPLATE Open Job Requisitions
- TEMPLATE Pending Job Requisitions
- TEMPLATE Closed Job Requisitions
- TEMPLATE Filled Job Requisitions
- TEMPLATE On-Hold Job Requisitions
- TEMPLATE Overdue Job Requisitions

### To customize a recruiting report template:

1. Go to .
2. Beside the template that you want to customize, click **Edit**.
3. In the **Search Title** field, remove "TEMPLATE" from the name of the search, and enter a new name for the search if necessary.
4. In the **Audience** tab, from the **Roles** list, select the roles that should have access to the saved search.
5. If necessary, update the settings in any of the other tabs (for example, you can update search criteria in the **Criteria** tab).
6. Check the **Show in Menu** box.
7. Click **Save As**.

### To create a center category for the saved search:

Create a center category so that you can access the recruiting reports from menu links.

1. Go to Customization > Centers and Tabs > Center Categories > New.
2. Set the following values:
  - Set the **Label** field to **Recruiting**.
  - In the **Center Type** list, select **Classic Center**.
  - In the **Center Tab** list, select **Reports**.
3. In the table, depending on the report that was used to create the saved search, set the following values:

For each of the following reports:	Set the Link column to:	Set the Label column to:
Open Job Requisitions	Open Job Requisitions Results	Open Job Requisitions
Pending Job Requisitions	Pending Job Requisition Results	Pending Job Requisitions
Closed Job Requisitions	Closed Job Requisition Results	Closed Job Requisitions
Filled Job Requisitions	Filled Job Requisition Results	Filled Job Requisitions
On-Hold Job Requisitions	On-Hold Job Requisition Results	On-Hold Job Requisitions
Overdue Job Requisitions	Overdue Job Requisitions Results	Overdue Job Requisitions

4. Click **Save**.

You can now access the reports at Reports > Recruiting.

## Employee Change History Report

The Employee Change History report provides an efficient way to audit changes to employee data. You can use this report to audit changes across many employees within a specific date range or for specific fields. For example, HR and Payroll personnel can use the Employee Change History report to access the following information:

- An HR Administrator wants to see all changes to employee data to determine what information was changed and when.
- A Payroll Administrator wants to see the changes made to employee payroll settings between the first and last day of the year. This information helps to answer questions from employees and tax agencies related to payroll processing and tax filing.

To access the report, go to Reports > Employees/HR > Employee Change History.

You can customize this report in the Report Builder by clicking Customize on the results page. For more information, see the help topics [Filtering Data on Reports](#) and [Adding, Removing, or Reordering Report Columns](#).

 **Note:** This report does not support reporting by period even when the Report by Period preference is set to All Reports. The Report by Period preference can be configured at Home > Set Preferences, the Analytics subtab.

## Employee Saved Search Reports

 **Important:** The Employee Reports SuiteApp requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Employee Reports SuiteApp enables you to access employee reports that are available as NetSuite saved searches. When customized, the saved searches can be accessed from a unique Reports menu location.

## Prerequisites

Before you install the Employee Reports SuiteApp, make sure that the required features are enabled. Go to Setup > Company > Setup Tasks > Enable Features.

- On the **Employees** subtab, under HR Information System, check each of the box for **Job Management** and **Compensation Tracking**.
- On the **SuiteCloud** subtab, under SuiteScript, check the **Server SuiteScript** box.

## Installation

To install Employee Reports, go to Customization > SuiteBundler > Search & Install Bundles.

Use the following information to search for the SuiteApp:

- Bundle Name — **Employee Reports**
- Bundle ID — **167330**

Employee Reports is a managed bundle and is automatically updated whenever there are updates. These issue fixes and enhancements are available after the SuiteApp is updated in your account.

For more information about installing SuiteApps, see the help topic [Installing a Bundle](#).

## Accessing Employee Saved Search Reports

**Important:** The saved searches installed with the SuiteApp are not public. A user with the Administrator role must first customize the saved searches to define the roles that can access each saved search and their location in the Reports menu. For more information, see [Customizing Employee Reports](#).

You can access the following saved searches through their own menu options at Reports > Employees/HR:

- [Average Salary by Ethnicity Saved Search](#)
- [Average Salary by Gender Saved Search](#)
- [Average Salary by Job Saved Search](#)
- [Employee Birthday Report Saved Search](#)
- [Employee Birthdays by Month Saved Search](#)
- [Employee Roster Saved Search](#)
- [Employees by Age Range Saved Search](#)
- [Employees by Base Wage Type Saved Search](#)
- [Employees by Ethnicity Saved Search](#)
- [Employees by Gender Saved Search](#)
- [Employees by Hire Date Saved Search](#)
- [Employees by Job Saved Search](#)
- [Employees with Incomplete Compensation Data Saved Search](#)
- [Employees without Supervisors Saved Search](#)
- [New Hires \(Last 90 Days\) Saved Search](#)
- [New Hires by Ethnicity \(last 12 months\) Saved Search](#)
- [New Hires by Gender \(last 12 months\) Saved Search](#)
- [Termination Reasons \(Trends\) Saved Search](#)
- [Upcoming New Hires Saved Search](#)
- [Upcoming Terminations Saved Search](#)

You can print and export the Employee Reports saved search results, permitting the information to be shared as reports. Exporting is available to Excel, CSV, and PDF. You can find the print and export buttons at the top of the results list. For more information, see the help topic [Exporting Search Results](#).

You can also use saved search email to share complete search results with other users. To use saved search email, see the help topic [Saved Search Email](#).

For more information about saved searches, see the help topic [Saved Searches](#).

**Note:** When any of the Employee Reports saved search returns a single result, NetSuite opens the record by default if the user has permission to view the record. To return search results as a list when there is only one record in the results, check the **Show List When Only One Result** box in Set Preferences > Analytics > Search.

## Average Salary by Ethnicity Saved Search

The Average Salary by Ethnicity Saved Search lists the average annual base wages of active employees by ethnic group. By default, the results are sorted by ethnic group, average base wage, and employee count. In the results list, you can click each of the ethnicity name to view more details.

## Average Salary by Gender Saved Search

The Average Salary by Gender Saved Search lists the average annual base wages of active employees by gender group. By default, the results are sorted by gender group, average base wage, and employee count. In the results list, you can click each of the gender name to view more details.

## Average Salary by Job Saved Search

The Average Salary by Job Saved Search lists the average annual base wages of active employees by job group. By default, the results are sorted by job group, average base wage, and employee count. In the results list, you can click each of the job name to view more details.

## Employee Birthday Report Saved Search

The Employee Birthday Report saved search lists all active employees with their birth date, age, and other employee details. By default, results are sorted by birth date and then alphabetically by employee name.

## Employee Birthdays by Month Saved Search

The Employee Birthdays by Month saved search lists the number of active employees born in each calendar month. In the results list, you can click the name of each calendar month to view more details.

## Employee Roster Saved Search

The Employee Roster saved search lists all active employees in ascending alphabetical order by last name. By default, the results includes job, supervisor, class, department, location, subsidiary, and country details for each employee. The employee name is linked to the employee record.

## Employees by Age Range Saved Search

The Employees by Age Range saved search lists the number of active employees by age range. In the results list, you can click the name of each age range group to view more details.

## Employees by Base Wage Type Saved Search

The Employees by Base Wage Type saved search lists the number of active employees by base wage type. In the results list, you can click the name of each base wage type to view more details.

## Employees by Ethnicity Saved Search

The Employees by Ethnicity saved search lists the number of active employees by ethnic group. In the results list, you can click the name of each ethnic group to view more details.

## Employees by Gender Saved Search

The Employees by Gender saved search lists all active employees sorted by gender and hire date.

## Employees by Hire Date Saved Search

The Employees by Hire Date saved search lists all active employees by hire date, from the most recent to the least recent date of hire.

## Employees by Job Saved Search

The Employees by Job saved search lists the number of active employees by job. In the results list, you can click the name of each job to view more details.

## Employees with Incomplete Compensation Data Saved Search

The Employees with Incomplete Compensation Data saved search lists active employees who are missing at least one of the following information in their employee record: base wage, base wage type, and compensation currency. In the results list, the employee name is linked to the employee record.

## Employees without Supervisors Saved Search

The Employees without Supervisors saved search lists active employees without a supervisor on record. In the results list, the employee name is linked to the employee record.

## New Hires (Last 90 Days) Saved Search

The New Hires (Last 90 Days) saved search lists active employees hired within the last 90 days. Results are sorted by hire date, from the most recent to the least recent date of hire. By default, the results are sorted by hire date, from the most recent to the least recent date of hire.

## New Hires by Ethnicity (last 12 months) Saved Search

The New Hires by Ethnicity (last 12 months) saved search lists the number of active employees from each ethnic group who have been hired within the last 12 months. In the results list, you can click the

name of each ethnic group to view more details. In the detailed report, results are sorted by hire date, from the most recent to the least recent date of hire.

## New Hires by Gender (last 12 months) Saved Search

The New Hires by Gender (last 12 months) saved search lists the number of active employees from each gender group who have been hired within the last 12 months. In the results list, you can click the name of each gender group to view more details. In the detailed report, results are sorted by hire date, from the most recent to the least recent date of hire.

## Termination Reasons (Trends) Saved Search

The Termination Reasons (Trends) saved search lists reasons cited by inactive employees for terminating their employment, and the number of times each reason is cited. In the results list, you can click the name of each termination reason to view more details.

## Upcoming New Hires Saved Search

The Upcoming New Hires saved search lists employees with hire dates that after the current date. By default, the results are sorted by hire date, job, and location.

## Upcoming Terminations Saved Search

The Upcoming Terminations saved search lists active employees with termination or release dates that are after the current date. By default, the results are sorted by termination date, job, and location.

## Customizing Employee Reports

You can customize the following Employee Reports Templates to create unique saved searches:

- TEMPLATE Average Salary by Ethnicity
- TEMPLATE Average Salary by Gender
- TEMPLATE Average Salary by Job
- TEMPLATE Employee Birthday Report
- TEMPLATE Employee Birthdays by Month
- TEMPLATE Employee Roster
- TEMPLATE Employees by Age Range
- TEMPLATE Employees by Base Wage Type
- TEMPLATE Employees by Ethnicity
- TEMPLATE Employees by Gender
- TEMPLATE Employees by Hire Date
- TEMPLATE Employees by Job
- TEMPLATE Employees with Incomplete Compensation Data
- TEMPLATE Employees without Supervisors

- TEMPLATE New Hires (Last 90 Days)
- TEMPLATE New Hires by Ethnicity (Last 12 months)
- TEMPLATE New Hires by Gender (Last 12 months)
- TEMPLATE Termination Reasons (Trends)
- TEMPLATE Upcoming New Hires
- TEMPLATE Upcoming Terminations

### To customize an employee report template:

1. Go to .
2. Beside the template that you want to customize, click **Edit**.
3. In the **Search Title** field, remove "TEMPLATE" from the name of the search, and enter a new name for the search if necessary.
4. In the **Audience** tab, from the **Roles** list, select the roles that should have access to the saved search.
5. If necessary, update the settings in any of the other tabs (for example, you can update search criteria in the **Criteria** tab).
6. Click **Save As**.

**Tip:** To make it easier to complete the next set of steps, after you create your new saved search, copy its ID. On the Saved Searches page, the ID appears in the **ID** column, beside the name of the saved search.

### To add a menu link for a saved search:

After you customize a template and create a new saved search, you can add a menu link to access the saved search.

1. Go to Customization > Scripting > Scripts.
2. Beside **ER Redirect Su**, click **View**.
3. Click the **Deployments** tab. For each of the deployments that correspond to the employee report templates that you customized, do the following:
  - a. Click the deployment. For example, if you created a customized saved search based off of the Employee Birthday Report, click the **Employee Birthday** deployment.
  - b. Click **Edit**.
  - c. Click the **Parameters** tab. In the **View** field, enter the ID for the corresponding saved search that you customized earlier (for example, the ID for the customized Employee Birthday Report might be `customsearch_er_employee_bday_2`).
4. Check the **Deployed** box.
5. Click **Save**.

**Note:** To find the ID for the saved search, go to Lists > Search > Saved Searches. The ID appears beside the saved search in the ID column.

- d. In the **Audience** tab, from the **Roles** list, select the roles that should have access to the saved search.

You can now find the customized saved search by going to Reports > Employees/HR.

# Compliance

NetSuite provides the following features and SuiteApps that enable you to comply with government and industry requirements:

- Workplace Incident Tracking
- Affordable Care Act (ACA) Reporting
- Government-Issued ID Tracking
- Benefits Tracking

# Workplace Incident Tracking

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Health and Safety SuiteApp enables you to record and report on health and safety incidents in the workplace. Using this SuiteApp's reporting features, you can generate any reports that are required to document your compliance with regulatory requirements in your jurisdiction. This SuiteApp provides three versions of the workplace incident form:

- Occupational Safety and Health Administration (OSHA) 301 form for companies in the United States
- Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR) form for companies in the United Kingdom
- General incident reporting form for other jurisdictions

For more information on this SuiteApp, see the following topics:

- [Setting Up the Health and Safety SuiteApp](#)
- [Working with Workplace Incidents](#)
- [Adding a Workplace Incident](#)
- [Generating OSHA Workplace Incident Logs and Summaries](#)

## Setting Up the Health and Safety SuiteApp

### Prerequisites for the Health and Safety SuiteApp

To install the Health and Safety SuiteApp, you must have NetSuite 2016.2 or later (with SuiteScript 2.0). Before installing this SuiteApp, make sure that the following features are enabled in your NetSuite account (if you do not see all of these features on the Enable Features page, contact your NetSuite account manager):

- Custom Records
- Server SuiteScript

### Installing the Health and Safety SuiteApp

Install the Health and Safety SuiteApp:

- Bundle Name: **Health and Safety**
- Bundle ID: 109485

This is a managed bundle and is automatically updated whenever there are updates. These issue fixes and enhancements are available after the SuiteApp is updated in your account.

For more information about installing SuiteApps, see [Installing a Bundle](#) in the NetSuite Help Center.

### Enabling the Workplace Incident Forms

The Healthy and Safety SuiteApp comes with three workplace incident reporting forms:

- Accident Record: For Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR) compliance. Use this form for workplaces in the United Kingdom.
- OSHA 301: For Occupational Safety and Health Administration (OSHA) compliance. Use this form for workplaces in the United States.
- General: For all other jurisdictions.

You can choose to enable one or more of these forms.

#### To enable workplace incident forms:

1. Go to Setup > Health and Safety > Preferences.
2. On the Health and Safety Preferences page, click **Edit**.
3. Click the form you want to enable. To select more than one form, hold down the CTRL button and click the forms.
4. Click **Save**.

## Configuring Your Company Settings for Incident Tracking

Before you can use the Health and Safety SuiteApp in NetSuite, you must make sure that your industry information is included in your company settings.

If you have a NetSuite OneWorld account with multiple subsidiaries, the industry information that you enter on the Company Information page are the values that NetSuite uses for your top-level or root subsidiary.

If your company has subsidiaries, this information must be accurate for each subsidiary. When you first configure your industry information in your subsidiaries, the company-level industry information appears in the subsidiary information by default, but you can customize this information.

#### To add industry information for your company:

1. Go to Setup > Company > Company Information.
2. In the **Industry Description** field, enter a description of your industry. This can be any text, but should be as informative as possible for incident report logging compliance.
3. Select a type from the **Industry Classification Type** dropdown list: **SIC – Standard Industrial Classification** or **NAICS – North American Industry Classification System**. Based upon your industry standards, you should know which type your company should use.
4. Enter the appropriate number in the **Industry Classification Number** field. Based upon your industry standards, you should know which classification number your company should use.
5. Click **Save**.

#### To add industry information for your subsidiaries (OneWorld only):

1. Go to Setup > Company > Subsidiaries.
2. Click **Edit** beside the subsidiary for which you want to change industry information. If you have already set these fields in your company settings, these fields are filled with those values by default. You can keep those values or change them as needed.
3. If you want to change this information, in the **Industry Description** field, enter a description of your industry. This can be any text, but should be as informative as possible for incident report logging compliance.
4. Select a type from the **Industry Classification Type** dropdown list: **SIC – Standard Industrial Classification** or **NAICS – North American Industry Classification System**. Based upon your industry standards, you should know which type your company should use.

5. Enter the appropriate number in the **Industry Classification Number** field. Based upon your industry standards, you should know which classification number your company should use.
6. Click **Save**.
7. Add industry information for any other subsidiaries.

## Working with Workplace Incidents

### To view the list of incidents:

1. Using the Classic Center, go to Lists > Workplace Incidents > Workplace Incident List. The Workplace Incident List page shows all of the incidents that your company has logged.  
If you are using the Accounting Center, go to Payroll and HR > Lists > Workplace Incidents > Workplace Incident List.
2. To see all inactive incident records, check the **Show Inactives** box.
3. To view an individual incident record, click **View** beside it.

## Deleting a Workplace Incident

As an account administrator, you can delete an incident record, but in most cases, we recommend you make the record inactive instead. Only account administrators can delete an incident.

Only delete an incident record if you are absolutely certain that it is not required. For example, if you created an incident record more than once for the same incident or decided that an incident does not meet regulatory reporting requirements, you might delete the incident record.

### To delete an incident:

1. Go to Lists > Employees > Workplace Incidents.
2. Click **Edit** beside the incident you want to delete.
3. Select **Delete** from the **Actions** menu.
4. When prompted to confirmation the deletion, click **OK**.

## Adding a Workplace Incident

You add a workplace incident when an incident occurs that meets your regulatory requirements. You can add an incident from the Workplace Incident List page or from the employee record of the employee to whom the incident occurred. You can also add a new incident with information copied from an existing incident. You do this while viewing the existing incident.

When you are finished filling out all of the information about the incident, click **Save**. The information entered on this page is not saved until you do so. If you are uncertain about some of the information, you can save an incomplete incident record and edit it later.

### To add an incident:

1. Using the Classic Center, go to Lists > Workplace Incidents (or from the Accounting Center, go to Payroll and HR > Lists > Workplace Incidents) and click **New Workplace Incident**. On the **Select a form type** page, click one of the form types: **Accident Report** (RIDDOR), **OSHA 301**, or **General**.

OR

Go to Lists > Employees > Employees. Click **Edit** or **View** beside the employee involved in the incident. On the **Human Resources** subtab, on the **Workplace Incidents** subtab, click **New Workplace Incident**.

2. To modify the details of an existing incident record, go to Lists > Workplace Incidents > Workplace Incident List and click **Edit** next to the name of the incident.

### To add an incident from an existing incident:

1. Using the Classic Center, go to Lists > Workplace Incidents > Workplace Incident List. If you are using the Accounting Center, go to Payroll and HR > Lists > Workplace Incidents > Workplace Incident List.
2. Click **View** beside the incident whose details you want to copy.
3. On the **Actions** menu, click **Make Copy**.

## Adding a General Workplace Incident

### To add a general workplace incident:

1. Using the Classic Center, go to Lists > Workplace Incidents (or from the Accounting Center, go to Payroll and HR > Lists > Workplace Incidents) and click **New Workplace Incident**. On the **Select a form type** page, click **General**.

OR

Go to Lists > Employees > Employees. Click **Edit** or **View** beside the employee involved in the incident. On the **Human Resources** subtab, on the **Workplace Incidents** subtab, click **New Workplace Incident**.

From the **Form Type** dropdown list, select **General**. The Workplace Incident page displays the General form fields.

2. Enter a **Case Number**. Note that the **Workplace Incident ID** is a unique number generated by NetSuite when you create the incident.
3. Select a location from the **Location** dropdown list. This is the list of locations defined in your company information.
4. If you want this incident to be inactive, select the **Workplace Incident is Inactive** box. This affects how the incident appears on the Incidents list.
5. Enter the date when this form is being completed in the **Date of Form Completion** field. This defaults to today, but you can change it. For instance, if you are entering information from a paper form that has already been filled out, you might specify the date shown on that form.
6. Enter the date when this incident was first reported in the **Date Incident Was First Reported** field.

### Follow Up Contact Information and Witnesses

1. Select the employee filling out this form in the **Form Completed By** dropdown list. This defaults to your name, but you can select another employee. The person's email address and phone number are sourced from the employee record, but you can edit them.
2. Enter the name of the person first reporting the incident in the **Incident Was First Reported By** field. Enter that person's email address and phone number.

3. Select the person the **Incident Was First Reported To** from the dropdown list. This person must be an employee. The person's email address and phone number are sourced from the employee record, but you can edit them.
4. Select a contact person from the **Contact This Person For More Information On The Incident** dropdown list. This person must be an employee. The person's email address and phone number are sourced from the employee record, but you can edit them.
5. Enter **Name**, **Email** address, and **Phone** number for up to two witnesses to the incident.

## Incident Details

1. Enter the **Date of Workplace Incident**.
2. Enter the **Time of Workplace Incident** or check the **Time Cannot Be Determined** box.
3. Enter the **Time Employee Began Work on Day Incident Occurred**.
4. Select the **Severity** of the incident from the dropdown list. If you are an administrator, you can change severity options. For more information, see [Configuring Incident Severity Options](#).
5. Select the **Impact to Property** of the incident from the dropdown list. If you are an administrator, you can change impact to property options. For more information, see [Configuring Impact to Property Options](#).
6. Describe as many aspects of the incident as you can, using the categories shown:
  - **Describe in Detail What Happened**
  - **Describe the Events Leading Up to the Injury**
  - **Describe the Injury**
  - **Describe Where the Incident Occurred**
  - **Address Where Incident Occurred**
  - **Additional Comments**

## Employee Information

1. Select the employee from the **Full Name** dropdown list. Most of the fields in this section are automatically sourced from the employee record.
2. If values in those sourced fields are not correct, edit them as needed.
3. Enter the employee's **Medical Insurance Number**.

## Work Impact

1. If the employee missed work because of the incident, check the **Incident Resulted in Days Away From Work** box.
2. If you checked this box, enter the **Number of Days** away from work and the **Date Returned to Work**.

## Medical Care

1. Enter the **Name of Physician or Other Health Care Professional**.
2. If the employee received treatment at a hospital or any location other than the worksite, check the **Treatment Was Given Away From Worksite** box. Enter information in the **Date of First Visit to Facility**, **Name of Facility**, and **Facility Address**.
3. If the **Employee Was Treated in an Emergency Room**, check the box.
4. If the **Employee Was Hospitalized Overnight as an In-Patient**, check the box.

 **Note:** When you are finished filling out all of the information about the incident, click **Save**.

## Adding an OSHA 301 Workplace Incident

If your company is located in the United States, then you are under the jurisdiction of the Occupational Safety and Health Administration (OSHA). You use the OSHA 301 form to report workplace incidents and injuries. For more information about other available forms, see ... [cross ref to Adding a General Workplace Incident and Adding a RIDDOR Accident Record Incident].

You add a workplace incident when an incident occurs that meets your regulatory requirements. You can add an incident from the Workplace Incident List page or from the employee record of the employee to whom the incident occurred. You can also add a new incident with information copied from an existing incident. You do this while viewing the existing incident.

When you are finished filling out all of the information about the incident, click **Save**. The information entered on this page is not saved until you do so. If you are uncertain about some of the information, you can save an incomplete incident record and edit it later.

### To add an OSHA 301 workplace incident:

1. Using the Classic Center, go to Lists > Workplace Incidents (or from the Accounting Center, go to Payroll and HR > Lists > Workplace Incidents) and click **New Workplace Incident**. On the **Select a form type** page, click **OSHA 301**.

OR

Go to Lists > Employees > Employees. Click **Edit** or **View** beside the employee involved in the incident. On the **Human Resources** subtab, on the **Workplace Incidents** subtab, click **New Workplace Incident**.

From the **Form Type** dropdown list, select **OSHA 301**. The Workplace Incident page displays the OSHA 301 form fields.

2. Note that the **Workplace Incident ID** is a unique number generated by NetSuite when you create the incident.
3. Select a location from the **Location** dropdown list. This is the list of locations defined in your company information.
4. If you want this incident to be inactive, select the **Workplace Incident is Inactive** box. This affects how the incident appears on the Incidents list.
5. Enter the date when this form is being completed in the **Date of Form Completion** field. This defaults to today, but you can change it. For instance, if you are entering information from a paper form that has already been filled out, you might specify the date shown on that form.

### Primary Information

1. Select the name of the employee filling out this incident form from the **Completed By** dropdown list. Your name is selected by default, but you can select another employee.
2. Enter the phone number and job title of the employee completing this form in the **Phone** and **Title** fields. These fields are sourced from the employee record, but you can change them.

### Employee Information

1. Select the employee's name from the **Full Name** dropdown list. The fields in this section are automatically sourced from the employee record, but you can edit them.

2. To hide the name of the employee in the OSHA 300 log, check the **This is a Private Case** box. When this box is checked, the words "Privacy Case" will appear in the log instead of the employee's name. After reading the notification popup window, click **OK**.
3. If you want to edit the fields sourced from the employee record, enter new information in the **Street, City, State, Zip, Date Hired, and Date of Birth** fields. Select a gender from the **Gender** dropdown list.

### Physician or Other Health Care Professional Information

1. Enter the appropriate name in the **Name of physician or other health care professional** field.
2. If the employee was treated at a facility away from the workplace, check the **Treatment was given away from worksite** box and enter information in the following fields:
  - Name of Facility
  - Facility Street
  - Facility City
  - Facility State
  - Facility Zip
3. If the **Employee was treated in an emergency room**, check the box.
4. If the **Employee was hospitalized overnight as an in-patient**, check the box.

### Case Information

1. In the **Case Number** field, enter any other tracking number that your organization has assigned to this incident.
2. Enter the time the employee started work on the day the incident occurred in the **Time Employee Began Work on Day Incident Occurred** field.
3. Select the **Date of the injury or illness**. The current date is selected by default, but you can select a different date.
4. Enter the **Time employee began work on the day the incident occurred**. In the **Time of Incident** field, enter the time when the incident occurred. If this time is not known, check the **Time Cannot Be Determined** box.
5. Select the type of injury caused by the incident from the **Injury or Illness Type** dropdown list.
6. Select the classification from the **Case Classification** dropdown list. Enter additional information as requested:
  - If you selected **Days away from work** or **Remained at work – Job transfer or restriction**, enter the number of days in the **Number of Days** in the field. This field is not available if you have not selected those Case Classification options.
  - If you selected **Death**, enter a **Date of Death**.

 **Note:** If this workplace incident has caused an employee death, read and follow the instructions in the Information box that appears.

7. Describe as many aspects of the incident as you can, using the categories shown:
  - What was the injury or illness?
  - What happened?
  - What was the employee doing just before the incident occurred?
  - What object or substance directly harmed the employee?

- Where did the event occur?

## Attachments

1. If you have any files with supporting information, such as pictures, click the **Attachments** tab.
2. Select a file from the **Attach File** dropdown list. To upload a file to attach, click **New**.
3. Click **Add**.

## Notes

1. To add a note to the incident form, click the **Notes** tab.
2. Click **New Note**. Enter the note information and click **Save**.

# Adding a RIDDOR Workplace Incident

You add a workplace incident when an incident occurs to an employee that meets your regulatory requirements. If your workplace is located in the United Kingdom, you are governed by the Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR). You can add an incident from the Workplace Incident List page or from the employee record of the employee to whom the incident occurred. You can also add a new incident with information copied from an existing incident. You do this while viewing the existing incident.

When you are finished filling out all of the information about the incident, click **Save**. The information entered on this page is not saved until you do so. If you are uncertain about some of the information, you can save an incomplete incident record and edit it later.

## To add a RIDDOR workplace incident:

1. Using the Classic Center, go to Lists > Workplace Incidents (or from the Accounting Center, go to Payroll and HR > Lists > Workplace Incidents) and click **New Workplace Incident**. On the **Select a form type** page, click **Accident Record**.

OR

Go to Lists > Employees > Employees. Click **Edit** or **View** beside the employee involved in the incident. On the **Human Resources** subtab, on the **Workplace Incidents** subtab, click **New Workplace Incident**.

From the **Form Type** dropdown list, select **Accident Record**. The Workplace Incident page displays the form fields for a RIDDOR Accident Report.

2. Enter the **Accident Book Number** and the Accident Record Report Number. You can find these numbers in the hard-copy Accident Book you would have used to first record the incident. Note that the **Workplace Incident ID** is a unique number generated by NetSuite when you create the incident.
3. Select a location from the **Location** dropdown list. This is the list of locations defined in your company information.
4. Enter the date when this form is being completed in the **Date of Accident Record Completion** field. This defaults to today's date, but should be set to the date when the incident was recorded in the hard-copy Accident Book.
5. Enter the date when this incident was first reported in the **Date When Incident Was First Reported to the Organisation** field.
6. If you want this incident to be inactive, select the **Workplace Incident is Inactive** box. This affects how the incident appears on the Incidents list.

## Affected Person Information

1. To give your organization's safety representative access to the affected person's personal information, check the **Affected Person Has Given Consent to Disclose Their Personal Information to Safety Representative** box. It is important to only check this box if the affected person has given this consent.
2. Enter the name of the affected person in one of the following ways:
  - If the affected person is an employee, select their name from the **Full Name** dropdown list. The person's **Occupation**, **Email**, **Phone**, **Address**, and **Postcode** are sourced from the employee record. You can edit these fields if you wish.
  - If the person is not an employee, check the **Affected Person is not an Employee** box. Enter their name in the **Full Name** field and complete the rest of the fields in this section.

## Follow Up Contact Information

1. In the **Accident Report Completed By** field, enter the name of the person completing this form.
2. Enter the **Occupation**, **Address**, **Email**, **Phone**, and **Postcode** for this person.
3. Select a contact person from the **Contact This Person For More Information on the Incident** dropdown list. This person must be an employee of your organization.
4. The **Email** and **Phone** fields for this contact person are populated from the employee record. You can edit these fields if you wish.

## Incident Details

1. Enter the date on which the incident occurred in the **Date of Incident** field. Note that this is not necessarily the date on which you are entering this incident in the Accident Book or NetSuite.
2. Enter the time at which the incident occurred in the **Time of Incident** field.
3. Select the type of incident from the **Incident Type** dropdown list. Note that an incident does not necessarily have resulted in an injury to be reportable.
4. Enter the immediate cause in the **Cause of the Incident** field.
5. Enter where in your workplace (such as the physical area, department, or room) the incident occurred in the **Location of the Incident** field.
6. In the incident resulted in an injury, then enter information in the **If An Injury Occurred, Describe the Injury** field.

## RIDDOR Reporting

1. If the type or circumstance of the incident fits the criteria set out by RIDDOR, check the **Incident is Reportable Under RIDDOR** box.
2. If you checked this box, enter the **Person Who Reported** the incident and the **Date Reported to HSE**. Select the **Method of Reporting** from the dropdown list.

## Work Impact

1. If the affected person missed days of work as a result of the incident, check the **Incident Resulted in Days Away from Work** box. Note: if you selected Death as the Type of Incident, this setting is not available.
  - **Date Returned to Work**
2. If you checked this box, enter the **Number of Days** the person missed from work and the **Date Returned to Work**.

## Medical Care

1. If the affected person had to be treated in a hospital, check the **Affected Person Was Treated in Hospital** box.
2. If you checked this box, enter:
  - **Name of Physician or Other Health Care Professional**
  - **Date of First Visit to Facility**
  - **Name of Facility**
  - **Facility Address**

## Witnesses

1. Enter the **Name** of up to two witnesses to the incident.
2. Enter the **Email**, and **Phone** number of the witness(es).

## Attachments

1. If you have any files with supporting information, such as pictures, click the **Attachments** tab.
2. Select a file from the **Attach File** dropdown list. To upload a file to attach, click **New**.
3. Click **Add**.

## Notes

1. To add a note to the incident form, click the **Notes** tab.
2. Click **New Note**. Enter the note information and click **Save**.

## Saving the Incident Form

When you are satisfied with the information you have provided in the form, click **Save**.

## Generating OSHA Workplace Incident Logs and Summaries

If your workplace is located in the United States, you must periodically generate logs and summaries for Occupational Safety and Health Administration (OSHA) compliance. An OSHA 300 log is a list of all of your incidents that match your filter criteria, while an OSHA 300 summary is a compilation of statistics and information about your incident history. If you are located in the United Kingdom or another non-U.S. jurisdiction, these reports are not available.

### To generate an OSHA 300 log:

1. Go to Reports > Workplace Incidents > OSHA 300 Log. The OSHA's Form 300 Log of Work-Related Injuries and Illnesses page appears.
2. From the **Location** dropdown list, select a location.
3. From the **Generate Report For** dropdown list, select the year to include in the report.
4. From the **Generate As** dropdown list, select the output format you want to generate: **PDF** or **XML Spreadsheet**.

5. Enter the information you want to appear on the log:
  - **Establishment Name**
  - **City**
  - **State**
6. Click **Generate**.

NetSuite generates the log and saves it to the specified file format.

#### To generate an OSHA 300A summary:

1. Go to Reports > Workplace Incidents > OSHA 300A Summary. The OSHA's Form 300A Summary of Work-Related Injuries and Illnesses page appears.
2. From the **Location** dropdown list, select a location. The establishment name, address, and industry fields are populated from your company and subsidiary information, but you can edit these fields.
3. From the **Generate Report For** dropdown list, select the year to include in the report.
4. From the **Generate As** dropdown list, select the output format you want to generate: **PDF** or **XML Spreadsheet**.
5. In the **Annual Average Number of Employees** field, enter the annual average number of employees at your company, for the calendar year you have selected, rounded to the nearest whole number. To calculate this value, add the total number of employees your establishment paid in all pay periods during the relevant year (full-time, part-time, temporary, seasonal, salaried and hourly) and divide that by the number of pay periods during that year. For more information about calculating this, refer to your OSHA documentation.
6. In the **Annual Hours Worked by All Employees** field, enter the annual sum of hours worked by all employees at your company. This should include all full-time, part-time, temporary, seasonal salaried and hourly employees for the specified calendar year, rounded to the nearest whole number. For more information about calculating this, refer to your OSHA documentation.
7. Click **Generate**.

# Affordable Care Act (ACA) Reporting

If you are an Applicable Large Employer (ALE) in the United States, you must comply with Affordable Care Act (ACA) reporting requirements. The ACA Reporting SuiteApp enables you to set up and track the health coverage offered to full-time employees, and electronically file the required health care coverage forms (1094-C and 1095-C) to the Internal Revenue Service (IRS).

ACA reporting is required for ALEs, which are employers that have 50 or more full-time or full-time-equivalent employees. Employees are considered full-time if they work on average at least 30 hours per week, or 130 hours per month.

With the ACA Reporting SuiteApp, you record and track employee health care information throughout the year as employees are hired, pass probation periods, and are offered coverage. Then, at year end, you can review and adjust the information as needed, before printing and distributing forms to employees and filing forms electronically with the IRS.

For more information about ACA reporting requirements, go to <https://www.irs.gov/instructions/i109495c>.

## ACA Reporting SuiteApp Features

The ACA Reporting SuiteApp enables you to do the following:

- View average hours of employment by employees for the specified measurement periods to assist in determining full-time equivalent status.
- Specify health coverage plans offered to groups of full-time employees at once, or to individuals as they become eligible.
- Review the information that will be submitted to the IRS on the 1094-C and 1095-C forms, with individual previews for each form, and a detailed report.
- Transmit the ACA information to process the electronic IRS filing, and print and distribute the forms to employees.

The following topics provide details about the ACA filing process:

- Identifying Part-Time Employees
- Creating an ACA Offer of Coverage Plan
- Assigning an ACA Offer of Coverage Plan to Multiple Employees
- Setting Up Employer Information
- ACA Filing
- Updating Employee Records for ACA
- Assigning an ACA Offer of Coverage Plan to an Employee
- Adding Covered Individuals to an Employee
- Adding Safe Harbor Codes to an Employee
- Excluding an Employee from ACA Reporting
- Viewing ACA Filing History

## What's New in Release 1.04 of the ACA Reporting SuiteApp

In Release 1.04 of the ACA Reporting SuiteApp, the following features were changed or added:

- Section 4980H Transition Relief options have been removed because that program does not apply to 2017.
- On the Covered Individuals subtab for employees with a self-insured plan, you can add the employee's name and birth date automatically from their employee record. For more information, see [Adding Covered Individuals to an Employee](#).
- You can now add a Limited Non-Assessment Period (from 0–90 days) from the employer setup. For more information, see [Setting Up Employer Information](#).
- You can now edit an individual employee's Limited Non-Assessment Period end date from the employee record. For more information, see [Assigning an ACA Offer of Coverage Plan to an Employee](#).
- The Employee Count Based On dropdown list has been moved to the Preferences subtab of the Employer Setup page. For more information, see [Setting Up Employer Information](#).
- You can view your filing history from previous years, if you used the ACA Reporting SuiteApp to report those years. For more information, see [Viewing ACA Filing History](#).

## Setting Up the ACA Reporting SuiteApp

This section includes the requirements and procedures for installing the ACA Reporting SuiteApp.

### Prerequisites for Installing the ACA Reporting SuiteApp

**Important:** To use the ACA Reporting SuiteApp, NetSuite Payroll must be actively used during the filing year.

Before installing the ACA Reporting SuiteApp, the following features must be enabled:

- Payroll — Setup > Company > Setup Tasks > Enable Features > Employees
- Custom Records — Setup > Company > Setup Tasks > Enable Features > SuiteCloud
- Client SuiteScript — Setup > Company > Setup Tasks > Enable Features > SuiteCloud
- Server SuiteScript — Setup > Company > Setup Tasks > Enable Features > SuiteCloud

### Applicable Large Employer (ALE) Member Information

To use the ACA Reporting SuiteApp, you must enter the legal name as it should appear on tax forms and an employer identification number (EIN) for at least one subsidiary. For more information, see the help topic [Creating Subsidiary Records](#). Subsidiaries should also have at least one payroll earning item type. For more information, see the help topic [Creating Payroll Earning Items](#).

### Installing the ACA Reporting SuiteApp

Only users with the Administrator role can install the ACA Reporting SuiteApp. This is a managed bundle and is automatically updated whenever there are updates.

After the ACA Reporting SuiteApp is installed, the Affordable Care Act (ACA) subtab is added to the employee record and access to the ACA landing page is available. For more information, see [Updating Employee Records for ACA](#) and [Viewing the ACA Landing Page](#).

The ACA Reporting SuiteApp can be disabled at any time. After it is disabled, billing stops and information for the current year is deleted. All filing data for prior years is retained for at least 7 years.

To install the ACA Reporting SuiteApp, go to Customization > SuiteBundler > Search & Install Bundles, and then click **Advanced**.

Use the following information to search for the SuiteApp:

- **Bundle Name** — Affordable Care Act (ACA) Reporting
- **Bundle ID** — 147355

For more information about installing SuiteApps, see the help topic [Installing a Bundle](#).

 **Note:** If the Install button is not available or if you cannot find this SuiteApp, this SuiteApp might not have been shared with your account. To get access to the SuiteApp, contact NetSuite Payroll Support.

## After the ACA Reporting SuiteApp is installed

Before using the ACA Reporting SuiteApp, the following must be completed:

- Specify the day of the month to use for determining the monthly employee count that will appear on the 1094-C form. For details, see [Setting Up Employer Information](#).
- Provide a default recipient for ACA-related email. For details, see [Setting Up a Default Recipient for ACA Notifications](#).
- Set up roles and permissions. For details, see [Roles and Permissions](#).

## Roles and Permissions

Each role that requires access to the ACA Reporting SuiteApp must be specified on the ACA Grant Permissions page. To assign roles, go to Setup > Customization > ACA Grant Permission (Administrator).

Roles assigned to this permission can perform the following tasks:

- [Assigning an ACA Offer of Coverage Plan to an Employee](#)
- [Adding Covered Individuals to an Employee](#)
- [Adding Safe Harbor Codes to an Employee](#)
- [Excluding an Employee from ACA Reporting](#)
- [Identifying Part-Time Employees](#)
- [Creating an ACA Offer of Coverage Plan](#)
- [Assigning an ACA Offer of Coverage Plan to Multiple Employees](#)
- [Setting Up Employer Information](#)
- [ACA Filing](#)
- [Viewing ACA Filing History](#)

## Setting Up a Default Recipient for ACA Notifications

You should set up a default recipient for ACA notifications. The default recipient receives an email message whenever changes applied to multiple employees for ACA reporting purposes have

completed. This includes when an ACA offer of coverage plan has been assigned to multiple employees, and when multiple employees have been identified as part-time.

### To set up a default recipient for ACA notifications:

1. Go to Setup > Company > Preferences > General Preferences (Administrator).
2. Click the **Custom Preferences** subtab.
3. From the **Email Notification Recipient** list, select the default recipient. The recipient must be an employee.
4. Click **Save**.

## Viewing the ACA Landing Page

To access the ACA landing page, go to Transactions > Employees > Affordable Care Act (Administrator) or Payroll and HR > Payroll > Affordable Care Act (Payroll Manager). Here you will find the steps you need to complete for pre-filing and filing.

For more information, see the following help topics:

- [ACA Pre-Filing](#)
- [ACA Filing](#)

## ACA Pre-Filing

Before filing, there are a number of pre-filing tasks to perform. Pre-filing involves identifying part-time employees, setting up and assigning an offer of coverage to employees, and entering employer ACA information. The information entered during pre-filing is used to file the 1094-C and 1095-C forms that are required for ACA reporting at year-end.

The ACA landing page guides you through each of the required pre-filing steps. To make filing at year-end manageable, this information can be easily tracked and updated on a monthly basis.

For information about the 1094-C and 1095-C forms, go to <https://www.irs.gov/instructions/i109495c>. For information on filing, see [ACA Filing](#).

ACA pre-filing includes:

- [Identifying Part-Time Employees](#)
- [Creating an ACA Offer of Coverage Plan](#)
- [Assigning an ACA Offer of Coverage Plan to Multiple Employees](#)
- [Setting Up Employer Information](#)

## Identifying Part-Time Employees

The first step for ACA pre-filing is identifying employees that do not meet the minimum number of hours to be considered full-time for a specified period.

### To identify part-time employees:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. If applicable, select the specific employer from the **View** list.

3. Click **Set Up Hours**.
4. Select the payroll items that are considered eligible hours of service, and that will be used for determining an employee's full-time status, as defined under Section 4980H. ACA-eligible payroll items include:
  - Earning: Wage
  - Earning: Salary
  - Earning: Vacation
  - Earning: Sick

The payroll items are automatically selected, but the list can be modified, if necessary. For more information about payroll items, see the help topic [Creating Payroll Items](#). For more information about eligible hours of service, go to <https://www.irs.gov/instructions/i109495c>.
5. Click **Done** to save the changes and return to the ACA landing page.
6. To identify employees that do not meet the minimum number of hours to be considered full-time, click **Set Part-Time**.
7. Select one or more employees, and click **Set to Part-Time**.
8. Specify the date range during which the employee will be considered part-time.

For example, an employee that had an average of less than 30 hours per week, from January 1 to December 31, 2016, may be set to part-time from January 1 to December 31, 2017 for the purposes of ACA. For more details, see <https://www.irs.gov/instructions/i109495c>.

9. Click **OK**.
10. Verify that the date range that the specified employees will be set to part-time status is correct in the 2016 Part-Time Status column.
11. Click **OK**.

The contact set up as the default recipient for ACA notifications receives an email message after the changes have been applied. For more information, see [Setting Up a Default Recipient for ACA Notifications](#).

To make changes, click **Edit Hours** from the ACA landing page.

## Creating an ACA Offer of Coverage Plan

An offer of coverage plan contains the details about the health coverage that is offered to employees. You can define multiple offer of coverage plans to assign to employees. After creating the offer of coverage plans, you assign them to individual employees from the employee record, or to multiple employees from the pre-filing section of the ACA landing page. For more information on how to assign an offer of coverage plan, see [Assigning an ACA Offer of Coverage Plan to an Employee](#) and [Assigning an ACA Offer of Coverage Plan to Multiple Employees](#).

### To create an ACA offer of coverage plan:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. If you have a NetSuite OneWorld account, select the specific subsidiary from the **View** list.
3. Click **Add Coverage**.
4. In the **Name** field, enter a unique name for the offer of coverage plan. The name specified here appears wherever you are required to select an offer of coverage plan.
5. If there is a specific carrier who is providing coverage for this plan, enter the name in the **Carrier** field.

6. If this offer of coverage plan is self-insured, check the **Self-Insured** box.

 **Note:** When a plan is self-insured, you are required to enter the covered individuals on the employee record. For more information, see [Adding Covered Individuals to an Employee](#).

7. Select the applicable offer of coverage code from the **Code** list. These codes specify the type of coverage, if any, that is available to the employee, their spouse, and dependents. For more information about coverage codes, go to <https://www.irs.gov/instructions/i109495c>.

The list of coverage codes includes:

- 1A — Qualifying Offer: Minimum essential coverage providing minimum value offered to full-time employee with employee contribution for self-only coverage equal to or less than 9.5% mainland single federal poverty line and at least minimum essential coverage offered to spouse and dependent(s).
  - 1B — Minimum essential coverage providing minimum value offered to employee only.
  - 1C — Minimum essential coverage providing minimum value offered to employee and at least minimum essential coverage offered to dependent(s) (not spouse).
  - 1D — Minimum essential coverage providing minimum value offered to employee and at least minimum essential coverage offered to spouse [not dependent(s)].
  - 1E — Minimum essential coverage providing minimum value offered to employee and at least minimum essential coverage offered to dependent(s) and spouse.
  - 1F — Minimum essential coverage NOT providing minimum value offered to employee; employee and spouse or dependent(s); or employee, spouse and dependents.
  - 1G — Offer of coverage to employee who was not a full-time employee for any month of the calendar year (which may include one or more months in which the individual was not an employee) and who enrolled in self-insured coverage for one or more months of the calendar year.
  - 1H — No offer of coverage (employee not offered any health coverage or employee offered coverage that is not minimum essential coverage, which may include one or more months in which the individual was not an employee).
  - 1J — Minimum essential coverage providing minimum value offered to employee and at least minimum essential coverage conditionally offered to spouse; minimum essential coverage not offered to dependent(s).
  - 1K — Minimum essential coverage providing minimum value offered to employee; at least minimum essential coverage offered to dependents; and at least minimum essential coverage conditionally offered to spouse.
8. If 1B, 1C, 1D, 1E, 1J, or 1K is selected as the offer of coverage code, enter the employee's lowest monthly premium for self-only minimum essential coverage in the **Lowest Cost of Employee Coverage** field, a **Start Month**, and a **Start Year**.
9. Click **Add**.
10. If the premium changed throughout the reporting year, add additional lines. Dates cannot overlap.

 **Note:** Maintain this information as it changes, to accurately report the data on a monthly basis.

11. Click **Save**.

After the offer of coverage plan is saved, employees can be assigned to it. For more information, see [Assigning an ACA Offer of Coverage Plan to an Employee](#) and [Assigning an ACA Offer of Coverage Plan to Multiple Employees](#).

## Making an ACA Offer of Coverage Plan Inactive

You can make offer of coverage plans inactive to prevent them from appearing in lists. If an offer of coverage plan is assigned to an employee, and you make it inactive, it is still assigned.

### To make an ACA offer of coverage inactive:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. Click the **Coverages** link beside Set Up & Assign Coverage.
3. Click **Edit** next to the plan you want to make inactive.
4. Check the **Offer of Coverage Inactive** box.
5. Click **Save**.

## Deleting an ACA Offer of Coverage Plan

If you no longer need an offer of coverage plan, you can delete it, as long as it is not assigned to an employee. If you cannot delete the plan, but do not want it to appear in lists or assign it to employees, you can inactivate it instead. For more information, see [Making an ACA Offer of Coverage Plan Inactive](#).

### To delete an ACA offer of coverage plan:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. Click the **Coverages** link beside Set Up & Assign Coverage .
3. Click **Edit** next to the plan to delete.
4. Select **Delete** from the **Actions** menu.
5. When prompted to confirm the deletion, click **OK**.

## Assigning an ACA Offer of Coverage Plan to Multiple Employees

After an offer of coverage plan has been set up, it can be assigned to a group of employees from the ACA landing page. The information entered here is used to generate the 1095-C forms to be filed for each employee. For more information, go to <https://www.irs.gov/instructions/i109495c>.

### To assign an ACA offer of coverage plan to multiple employees:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. If you have a NetSuite OneWorld account, select the specific subsidiary from the **View** list.
3. Click **Assign Coverage**.
4. By default, employees who were not full-time or not employed for the entire reporting year are excluded. The list of employees that are displayed in the list can be controlled using the filters.
5. From the list, select the employees to assign this coverage to.
6. Click **Assign Coverage**.
7. Select the offer of coverage plan, from the **Plan** list.
8. Enter a start date when the coverage plan is offered to the selected employees.

9. To record that coverage was offered after the employee's limited non-assessment period, instead of the specified start date, check the **Override start date with employees eligibility date** box. This will only be implemented when the eligibility date is later than the specified start date.
10. Check the **Auto-assign Safe Harbor Code 2C** box if each employee that was offered health coverage was enrolled in the coverage offered.
11. Click **Assign**.
12. Make sure the information displayed in the Plan column, and the Coverage column are correct.
13. If you have multiple plans that are assigned to different groups of employees, repeat the above steps.
14. Click **Save**.

The contact set up as the default recipient for ACA notifications receives an email message after the changes have been applied. For more information, see [Setting Up a Default Recipient for ACA Notifications](#).

## Setting Up Employer Information

You use the Employer Information page to enter information about the ALE member, which is used to file the 1094-C form at year end. ACA employer setup includes entering information for all ALE members of an aggregated group.

For example, company A is the parent of company B and company C. Combined, these companies have 100 full-time employees. Each separate employer in an ALE aggregated group is subject to the employer shared responsibility provisions, and each is subject to the associated information reporting requirements. Each separate employer must file its own 1094-C form, using its own Employer Identification Number (EIN).

**Note:** Section 4980H provided several forms of transition relief for 2016. No Section 4980H transition relief is available for 2017. For more information, go to <https://www.irs.gov/instructions/i109495c>

### To set up employer information:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. If you have a NetSuite OneWorld account, select the specific subsidiary from the **View** list.
3. Click **Set Up Employer**.
4. NetSuite automatically inserts information from the company or subsidiary record. To make changes, you can edit the information here.
5. Enter the name and contact number of the person who is responsible for answering questions from the IRS regarding the filing.
6. If there is a parent company, each separate employer is subject to the employer shared responsibility provisions, and must be entered under the **Other ALE Members** subtab. Select the months that the company was a member of the same ALE group, enter the company names, and unique EIN numbers of each affiliated ALE member.
7. Click **Add**.
8. If your employer is eligible for transition relief, select the certifications that apply from the **Certifications of Eligibility** subtab:
  - **Qualifying Offer Method** — If a qualifying offer was offered to one or more full-time employees, for every month during the year that the employees were considered full-time.

- **98% Offer Method** — If affordable health coverage, providing minimum value to at least 98% of your employees, and minimum essential coverage to those employees' dependents was offered.
  - 9. On the **Preferences** subtab, from the **Employee Count Based On** list, select the day of the month to use for determining the monthly employee count on the 1094-C form.
- For example, when you select **First Day of Each Month**, and an employee leaves the company in the middle of the month, they are still included in the monthly count.
- 10. In the **Limited Non-Assessment Period Override** field, enter the number of days (0-90) for which the Limited Non-Assessment Period can be overridden. This number is added to the employee's hire date or date of exclusion from ACA to determine the Limited Non-Assessment Period End Date, unless you have chosen to set this date manually.
  - 11. Click **Save**.

## ACA Filing

When the reporting year is done (for 2016, January 1, 2017; for 2017, January 1, 2018), the required health coverage forms (1094-C and 1095-C) can be electronically filed to the IRS. When you file your company's ACA files, the data is examined by Ceridian, your payroll partner. If it passes validation, Ceridian forwards your files to the IRS.

**Important:** For the 2017 reporting year, the deadline for filing is January 5, 2018.

## Filing for ACA

### To file for ACA:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. Click **Generate** from the Ready to File section of the ACA landing page.
3. To preview the 1094-C and 1095-C forms, click **Preview**, or click the **View Audit Log** link to open a file that can be viewed in Microsoft Excel.
4. When you are ready to transmit, click **File**. The File section shows the filings you have sent, with a filing number and date and time.

## Checking for ACA Filing Errors and Refiling

### To check for ACA filing errors and refile:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. On the ACA landing page, the Ready to File section shows the status of your filings, along with the filing number and date and time of your transmission. If your filing did not pass the Ceridian validation, an Errors button appears beside the filing. Click the **Errors** button to view the errors returned by Ceridian. A popup window appears showing the errors that occurred.
3. Correct the errors as indicated in the popup window. For assistance resolving these errors, contact Technical Support.
4. For any employees who had errors in the filing, edit the employee record and clear the errors.

5. When you have corrected the errors, return to the ACA landing page and click **Re-Generate**.
6. Click **Preview** and **View Audit Log** to confirm that your data is ready to be sent.
7. Click **Refile**.

## Removing Ineligible Employees from ACA Reporting

After you have already transmitted your ACA filing to the IRS, you can remove employees from ACA reporting. For example, you would remove an employee from reporting if they become ineligible or if you added them in error. To do this, you void their 1095-C form on their employee record and then refile. If you have not filed your ACA information with the IRS and you want to remove an employee from reporting before filing, you can exclude them. For more information, see [Excluding an Employee from ACA Reporting](#).

### To remove ineligible employees from ACA reporting:

1. Go to Payroll and HR > Lists > Employees (Payroll Manager).
2. On the Employees list, click **Edit** next to the employee you want to remove from reporting.
3. Click the **Affordable Care Act (ACA)** subtab.
4. Check the **Void 1095-C Form** box.
5. Click **Save**.
6. Refile your ACA data. For more information, see [Checking for ACA Filing Errors and Refiling](#).

## Updating Employee Records for ACA

When the ACA Reporting SuiteApp is installed, the Affordable Care Act (ACA) subtab appears on the employee record. From this subtab, you can assign an offer of coverage plan, add any covered individuals who are included in the plan, and apply a safe harbor code.

These topics detail the ACA setup tasks you can complete on the employee record:

- [Assigning an ACA Offer of Coverage Plan to an Employee](#)
- [Adding Covered Individuals to an Employee](#)
- [Adding Safe Harbor Codes to an Employee](#)
- [Excluding an Employee from ACA Reporting](#)

## Assigning an ACA Offer of Coverage Plan to an Employee

Before an ACA offer of coverage plan can be assigned, one must be created first. For details on how to create a plan, see [Creating an ACA Offer of Coverage Plan](#).

To assign a plan to multiple employees at one time, go to the ACA landing page. For more information, see [Assigning an ACA Offer of Coverage Plan to Multiple Employees](#).

The Limited Non-Assessment Period End Date is calculated as the end of the employee's third full calendar month of full-time employment, based on the employee's hire date, or the end of their exclusion from ACA. It is used to report when the employee is considered full-time for the purpose of ACA reporting. We recommend that you use the calculated Limited Non-Assessment Period End

Date, but you can override it. For example, if your employees are eligible for benefits after 30 days of employment, you could choose to set this date manually to 30 days after the hire date for each employee.

### To assign an ACA Offer of Coverage Plan to an employee:

1. Go to Payroll and HR > Lists > Employees (Payroll Manager).
2. On the Employees list, click **Edit** next to the employee who was offered coverage.
3. Click the **Affordable Care Act (ACA)** subtab.
4. Click the **Offer of Coverage** subtab.
5. From the **Plan** list, select the offer of coverage plan. If there is no offer of coverage plan shown, check to make sure one was created. For more information, see [Creating an ACA Offer of Coverage Plan](#).
6. Enter the **Start Month** and **Start Year** for this offer of coverage plan. Only enter an **End Month** and **End Year** when the employee has left the company, or if they changed to another offer of coverage plan.
7. Click **Add**.
8. Add additional lines if the employee was offered more than one coverage plan during the reporting year.
9. To set a different Limited Non-Assessment Period End Date, check the **Override Limited Non-Assessment Date** box and enter a different date.
10. Click **Save**.

## Adding Covered Individuals to an Employee

On the Covered Individuals subtab, in the Affordable Care Act (ACA) subtab on the employee record, you add the employee after you have assigned an offer of coverage plan to the employee. The employee's name and date of birth (if included on the employee record) are sourced from the employee record automatically, since this information is an IRS requirement. You also add the employee's spouse, dependents, or both, who are covered under the offer of coverage plan. Covered individuals are only required when the offer of coverage plan is self-insured. When a coverage plan is self-insured, it indicates that the employer assumes the financial risk of providing health care benefits to its employees. The individuals entered on the Covered Individuals subtab should meet the criteria of the coverage that is set up on the plan.

For example, if the coverage plan code is 1C, be sure to only add dependents to the list, not the employee's spouse. For more information on the types of coverage, see [Creating an ACA Offer of Coverage Plan](#).

**Note:** On the Covered Individuals subtab, you must list the employee first and then list the spouse, dependents, or both as applicable.

### To add covered individuals to an employee:

1. Go to Payroll and HR > Lists > Employees (Payroll Manager).
2. On the Employees list, click **Edit** next to the employee to add covered individuals to.
3. Click the **Affordable Care Act (ACA)** subtab.
4. Click the **Covered Individuals** subtab.

5. If you have not added the employee to the covered individuals list, then click **Add Employee**. The employee's name and date of birth (if included on the employee record) are populated. Confirm or enter the employee's **Date of Birth** and the **Start Month** and **Start Year** for the coverage. Optionally, enter the **End Month** and **End Year**. Click **Add**.
6. For each of the employee's spouse, dependents, or both, enter the **First Name** and **Last Name**, **Date of Birth**, and the **Start Month** and **Start Year** for the coverage. Optionally, enter the **End Month** and **End Year**. Click **Add**.
7. Add additional lines for each individual that is covered under the plan.
8. Click **Save**.

## Adding Safe Harbor Codes to an Employee

Safe harbor codes are applied when an employee qualifies for an exemption from the assessable payment. This section outlines the procedure for manually adding safe harbor codes. Manual entry is not required for employees that were not considered full-time, terminated, excluded from ACA, or in a limited non-assessment period. In these cases, the applicable safe harbor code is automatically added when generating the ACA filing. Manual entry is only required when safe harbor codes 2E, 2F, 2G, or 2H are applicable or if an existing code needs to be overridden. You can apply multiple safe harbor codes to an employee, but they cannot overlap.

For more information about safe harbor codes, see <https://www.irs.gov/instructions/i109495c>.

## Automatically Applied Safe Harbor Codes

Automatically applied safe harbor codes include:

- Safe harbor code 2A — Automatically added for any months that an employee was not employed on any day of the calendar month. This includes employees who were not yet hired, excluded from ACA, or terminated before the first day of the reporting month.
- Safe harbor code 2B — Automatically added for any months that an employee was not considered full-time. This includes employees who were excluded from ACA or terminated during the reporting month.
- Safe harbor code 2C — Can be applied automatically when assigning an ACA offer of coverage plan to multiple employees. For details, see [Assigning an ACA Offer of Coverage Plan to Multiple Employees](#).
- Safe harbor code 2D — Automatically added for any months that an employee was in a limited non-assessment period.

### To add safe harbor codes to an employee:

1. Go to Payroll and HR > Lists > Employees (Payroll Manager).
2. On the Employees list, click **Edit** next to the employee that you want to add a safe harbor code to.
3. Click the **Affordable Care Act (ACA)** subtab.
4. Click the **Safe Harbor Codes** subtab.
5. From the **Code** list, select the applicable safe harbor code.

The safe harbor codes include:

- 2A. Employee not employed during the month — This safe harbor code is automatically applied during filing. For more information, see [Automatically Applied Safe Harbor Codes](#).

- 2B. Employee not a full-time employee — This safe harbor code is automatically applied during filing. For more information, see [Automatically Applied Safe Harbor Codes](#).
- 2C. Employee enrolled in coverage offered — Use this code for any month that the employee enrolled for each day of the month in health coverage offered by the ALE member, regardless of whether or not any other code in Code Series 2 might also apply. For example, the code for a Section 4980H affordability safe harbor.

Do not use this code:

- For any month in which the multi-employer interim rule relief applies. Instead, enter code 2E.
- If code 1G is entered in the **Code** list on the ACA offer of coverage plan. For more information, see [Creating an ACA Offer of Coverage Plan](#).
- For any month that an employee is enrolled in COBRA continuation coverage or other post-employment coverage. Instead, enter code 2A.
- For any month that the employee enrolled in coverage that was not minimum essential coverage.

Code 2C can be applied automatically when assigning an ACA offer of coverage plan to multiple employees. For details, see [Assigning an ACA Offer of Coverage Plan to Multiple Employees](#).

- 2D. Employee in a Section 4980H (b) limited non-assessment period — This safe harbor code is automatically applied during filing. For more information, see [Automatically Applied Safe Harbor Codes](#).
  - 2E. Multi-employer interim rule relief — Use this code for any month for which the multi-employer arrangement interim guidance applies for that employee, regardless of whether any other code in Code Series 2 (including code 2C) might also apply.
  - 2F. Section 4980H affordability from W-2 safe harbor — Use this code if the ALE member used Section 4980H Form W-2 safe harbor to determine affordability for purposes of Section 4980H(b) for this employee for the year. If an ALE member uses this safe harbor for an employee, it must be used for each month of the calendar year for which the employee is offered health coverage.
  - 2G. Section 4980H affordability federal poverty line safe harbor — Use this code if the ALE member used Section 4980H federal poverty line safe harbor to determine affordability for purposes of section 4980H(b) for this employee for any month(s).
  - 2H. Section 4980H affordability rate of pay safe harbor — Use this code if the ALE member used Section 4980H rate of pay safe harbor to determine affordability for purposes of Section 4980H(b) for this employee for any month(s).
6. Enter the **Start Month** and **Start Year** of the period when the exemption was in effect for the employee. You can also enter the **End Month** and **End Year** if this code applied for a short period of time. Note, that this date cannot be before the employee's hire date.
  7. Click **Add**.
  8. Add more safe harbor codes as necessary. The periods of multiple safe harbor codes cannot overlap.
  9. Click **Save**.

## Excluding an Employee from ACA Reporting

Unless otherwise specified, all employees are included in ACA reporting. They can be excluded from the Exclude from ACA subtab on the employee record for all or part of the reporting year, if they were

not considered full-time, as defined under Section 4980H, or are not considered an employee for the purpose of ACA reporting. For example, a contractor, a sole proprietor, or a partner may not be an employee for the purposes of ACA reporting.

### To exclude an employee from ACA reporting:

1. Go to Payroll and HR > Lists > Employees (Payroll Manager).
2. On the Employees list, click **Edit** next to the employee to exclude from ACA reporting.
3. Click the **Affordable Care Act (ACA)** subtab.
4. Click the **Exclude from ACA** subtab.
5. From the **Reason** list, select why the employee is excluded from ACA reporting.
6. Enter the **Start Month** and **Start Year** for the exclusion.
7. Optionally, enter the **End Month** and **End Year** for the exclusion.
8. Click **Add**.
9. Click **Save**.

## Viewing ACA Filing History

If you have used the ACA Reporting SuiteApp to report compliance for previous years, you can view your filing history on the ACA landing page.

### To view ACA filing history:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. On the ACA landing page, in the Filing History section, click **View** beside the year for which you want to view the filing.

# Government-Issued ID Tracking

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Government-Issued ID Tracking feature enables you to track a variety of government-issued identification information about your employees so that you can ensure that you have accurate documentation for your employees' travel, driving qualifications, and tax compliance.

For more information on this feature, see the following topics:

- [Government-Issued ID Tracking Overview](#)
- [Managing Government-Issued ID Types](#)
- [Managing Basic Government-Issued ID for Employees](#)
- [Managing Advanced Government-Issued ID for Employees](#)

## Government-Issued ID Tracking Overview

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

You can use the Government-Issued ID Tracking feature to track a variety of government-issued identification information about your employees so that you can ensure that you have accurate documentation for your employees' travel, driving qualifications, and tax compliance.

For each employee, you can enter information about their passport(s), driver's license(s), and several other government-issued IDs, such as tax identification numbers.

Many other government-issued IDs are only relevant in particular jurisdictions, so you can make some ID types inactive if you are not going to use them. When you make them inactive, they do not appear in the list of available types when you are adding IDs to an employee's record.

Before using Government-Issued ID Tracking, enable one of the two features: Basic or Advanced.

**Note:** If you have one of these features enabled and you enable the other one, NetSuite warns you that any custom scripting you have created will no longer function and will have to be changed.

## Basic Government-Issued ID Tracking

The Basic Government-Issued ID Tracking feature enables you to track:

- Passport Number
- Driver's License Number

## Advanced Government-Issued ID Tracking

The Advanced Government-Issued ID feature provides several ID types by default. It also allows you to create, edit, and delete your own custom types of ID to match your company's employee identification policies. By default, the feature includes:

- Passport Number
- Driver's License Number
- Individual Taxpayer Identification Number (ITIN)
- Inland Revenue Department Number (IRD)
- National Insurance Number (NINO)
- Social Insurance Number (SIN)
- Social Security Number (SSN)
- Tax File Number (TFN)

You cannot delete the standard government-issued ID types that are included in NetSuite by default. However, you can make them inactive (except for passport and driver's license) so that they do not appear in the list of available types when you are adding IDs to an employee's record.

## Roles and Permissions

For details about the permission requirements for Government-Issued ID Tracking, see [Advanced and Basic Government-Issued ID Tracking Permission Requirements](#).

## Managing Government-Issued ID Types

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

If you are using the Advanced Government-Issued ID Tracking feature, NetSuite has several ID types included by default, such as driver's license, passport, and tax identification numbers. If you need additional government-issued ID types, you can create custom ones to match your company's employee identification policies.

You cannot delete the standard government-issued ID types that are included in NetSuite by default. However, you can make them inactive (except for passport and driver's license) so that they do not appear in the list of available types when you are adding IDs to an employee's record.

**Note:** This is only available if you are using Advanced Government-Issued ID Tracking.

### To add a custom ID type:

1. Go to Setup > HR Information System > Government-Issued ID Types > New or click **New Government-Issued ID Type** on the Government-Issued ID Types page.  
To modify the details of an existing custom type, go to Setup > HR Information System > Government-Issued ID Types and click **Edit** next to the name of the type.
2. In the **Name** field, enter a name for the type.
3. In the **Description** field, enter a short unique description for the type.
4. If you want to be able to record more than one instance of this type for a particular employee, check the **Multiple Instances Allowed** box.
5. If you want this type to be inactive, select the **Inactive** box. This affects how the type appears on the Government-Issued ID Types list.

6. Click **Save**.

### To view the list of government-issued ID types:

1. Go to Setup > HR Information System > Government-Issued ID Types.
2. To see all inactive types, select the **Show Inactives** box.
3. To view an individual type, click **View** next to the name of the type.

### To delete a custom ID type:

1. Go to Setup > HR Information System > Government-Issued ID Types.
2. Click **Edit** beside the custom type you want to delete.
3. On the **Actions** menu, select **Delete**. Note that you cannot delete any standard ID types included by default with NetSuite.
4. When prompted to confirm the deletion, click **OK**.

## Managing Basic Government-Issued ID for Employees

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

If you have the Basic Government-Issued ID Tracking feature enabled, you can enter information for employees about these types of ID:

- Passport Number
- Driver's License Number

You enter only the numbers for these two types of ID. To enter more detailed information, you must enable the Advanced Government-Issued ID Tracking feature. You enter this information in two ways: from the employee record or from list page for the type of ID you are entering.

Make sure that you enter information exactly as it appears on the original documents.

### To add or edit passport information:

1. Go to Lists > Employees > Employees and click **Edit** beside the employee whose information you want to add or edit.
2. On the **Human Resources** subtab, enter the employee's passport number in the **Passport Number** field.
3. Click **Save**.

### To add or edit driver's license information:

1. Go to Lists > Employees > Employees and click **Edit** beside the employee whose information you want to add or edit.
2. On the **Government-Issued ID** subtab, enter the employee's driver's license number in the **Driver's License Number** field.
3. Click **Save**.

# Managing Advanced Government-Issued ID for Employees

**Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

If you have the Advanced Government-Issued ID Tracking feature enabled, you can enter information for employees about these types of ID:

- Passport Number
- Driver's License Number
- Individual Taxpayer Identification Number (ITIN)
- Inland Revenue Department Number (IRD)
- National Insurance Number (NINO)
- Social Insurance Number (SIN)
- Social Security Number (SSN)
- Tax File Number (TFN)

With the Advanced feature, you can also add information for custom types that you have created. Make sure that you enter information exactly as it appears on the original documents.

You enter this information in two ways: from the employee record or from list page for the type of ID you are entering.

## To add or edit passport information:

1. Go to Lists > Employees > Employees and click **Edit** beside the employee whose information you want to add or edit.
2. On the **Government-Issued ID** subtab, under **Passport**, click **New Passport**.
3. In the Passport window, enter the **Nationality**.
4. Enter the **Date of Issue**.
5. Optionally, enter a **Description**, especially if you are entering more than one passport for this employee.
6. Enter the employee's **Name As It Appears On Document**.
7. Enter the **Date of Expiration**.
8. Enter the **Issuing Authority/Region**.
9. Enter the **Passport Number**.
10. Click **Save**.

## To add or edit driver's license information:

1. Go to Lists > Employees > Employees and click **Edit** beside the employee whose information you want to add or edit.
2. On the **Government-Issued ID** subtab, under **Driver's License**, click **New Driver's License**.
3. In the Driver's License window, enter the **Date of Issue**.
4. Optionally, enter a **Description**, especially if you are entering more than one driver's license for this employee.

5. Enter the employee's **Name As It Appears On Document**.
6. Enter the **Date of Expiration**.
7. Enter the **Class/Level** of the license.
8. Enter the **Issuing Authority/Region**.
9. Enter the **Driver's License Number**.
10. Click **Save**.

#### To add or edit other ID information:

1. Go to Lists > Employees > Employees and click **Edit** beside the employee whose information you want to add or edit.
2. On the **Government-Issued ID** subtab, under **Other Government-Issued IDs**, click **New Government-Issued ID**.
3. In the Other Government-Issued ID window, select an ID type from the **Government-Issued ID Type** dropdown list. If the ID type you want to add is not shown in the dropdown list, you can add custom ID types. For more information, see [Managing Government-Issued ID Types](#).
4. Click the **Number** field and enter the ID number.
5. Click the **Name As It Appears On Document** field and enter the employee's name. Make sure that you are entering the name exactly as it appears on the document.
6. Optionally, click the **Description** field and enter a description for this ID.
7. Optionally, enter the **Date of Expiration**.
8. Add any more IDs for this employee.
9. Click **Save**.

# Benefits Tracking

The Benefits Tracking SuiteApp enables you to track your company's benefits plans so that both Human Resources and employees can access the details of plans within NetSuite instead of using the benefits carriers' websites. This SuiteApp also enables you to track and report on the costs paid by your company and your employees. This SuiteApp provides the following features:

- HR administrators can view the benefit plans of individual employees.
- HR administrators can view the costs of benefits plans that they can track the financial impact.
- Employees can view their own benefits plans through a Benefits Tracking portlet that they add to their dashboard.
- HR administrators can import benefit plan information directly from carriers into NetSuite instead of entering it manually.

For more information about Benefits Tracking, see the following topics:

- [Setting Up the Benefits Tracking SuiteApp](#)
- [Configuring Benefits Tracking](#)
  - [Assigning the Benefits Administrator Role](#)
  - [Confirming that Benefits Tracking Scripts Are Running](#)
  - [Creating Benefit Carriers](#)
  - [Creating Benefit Types](#)
  - [Creating Benefits](#)
  - [Assigning Benefits to an Employee](#)
- [Benefits Tracking Reports](#)
- [Importing Benefits Information from Carriers](#)

## Setting Up the Benefits Tracking SuiteApp

### Prerequisites for the Benefits Tracking SuiteApp

To install the Benefits Tracking SuiteApp, you must have the following features enabled:

- Custom Records
- Server SuiteScript
- Client SuiteScript

### Installing the Benefits Tracking SuiteApp

Install the Benefits Tracking SuiteApp:

- Bundle Name: **Benefits Tracking**
- Bundle ID: 181105

This is a managed bundle and is automatically updated whenever there are updates. These issue fixes and enhancements are available after the SuiteApp is updated in your account.

For more information about installing SuiteApps, see the help topic [Installing a Bundle](#).

## Configuring Benefits Tracking

After you install the Benefits Tracking SuiteApp, you have a series of steps to perform to configure benefits tracking:

- [Assigning the Benefits Administrator Role](#)
- [Confirming that Benefits Tracking Scripts Are Running](#)
- [Creating Benefit Carriers](#)
- [Creating Benefit Types](#)
- [Creating Benefits](#)
- [Assigning Benefits to an Employee](#)

### Assigning the Benefits Administrator Role

When you install the Benefits Tracking SuiteApp, a Benefits Administrator role is created in your account. You should assign the Benefits Administrator role to employees who oversee your benefits programs. For more information, see [Assigning Roles to an Employee](#).

### Confirming that Benefits Tracking Scripts Are Running

**To confirm that scripts are running:**

1. Go to Customization > Scripting > Scripted Records.
2. On the Scripted Records page, click **Edit** beside Employee.
3. On the User Event Scripts tab, make sure that the **Deployed** box beside the **Benefits - Employee UE** script is checked.
4. On the Client Scripts tab, make sure that the **Deployed** box beside the **Benefits - Employee Client** script is checked.
5. Click **Save**.

## Creating Benefit Carriers

A benefit carrier is a third-party company that provides benefits to your employees, for which your company or your employees, or both, pay premiums. For each benefit that you create using the Benefits Tracking SuiteApp, you can specify a carrier to track these benefit providers.

**To create a benefit carrier:**

1. Go to Setup > Benefits > Benefit Carriers > New.
2. On the Benefits Tracking — Carrier page, in the **Name** field, enter a unique name for the carrier.
3. Optionally, enter the following additional information for the carrier:
  - Address
  - Contact Email

- Contact Phone
- Website

4. Click **Save**.

## Creating Benefit Types

A benefit type is a category of benefit provided to an employee by a carrier, such as medical, dental, disability, or life insurance. When you install the Benefits Tracking SuiteApp, several default benefit types are populated for you:

- Life Insurance
- Accidental Death & Dismemberment (AD&D)
- Medical
- Dental
- Vision
- Long-Term Disability (LTD)
- Short-Term Disability (STD)
- Health Spending Account (HSA)

You can edit or delete these types or create your own to match your organization's situation.

### To create a benefit type:

1. Go to Setup > Benefits > Benefit Types > New.
2. In the **Name** field, enter a unique name for the type.
3. Click **Save**.

## Creating Benefits

A benefit is a specific, non-wage compensation item provided to an employee. When you create a benefit, you associate it with a benefit type, carrier, and coverage. You also specify the monthly employer and employee costs for the benefit so that you can track these figures for your company.

If you are using NetSuite Payroll, you can also associate the benefit with a payroll deduction and employer contribution so that the appropriate deductions and contributions are reflected on employees' paychecks. In this case, before you create benefits, you should create the payroll deduction items and the payroll employer contribution items that you plan to associate with those benefits. For more information, see the help topics [Creating Payroll Deduction Items](#) and [Creating Payroll Employer Contribution Items](#).

**Note:** You should create new payroll items for use with benefits only, and not use those payroll items for other uses. If you add a benefits-related payroll item to an employee from the Payroll tab for another reason, the payroll item will be added to the employee's benefits. This could produce inaccurate results. Also, you should not associate a benefit with a payroll item which is derived from another payroll item.

### To create a benefit:

1. Go to Setup > Benefits > Benefits > New.

2. In the **Name** field, enter a unique name for the benefit.
3. Optionally, enter a description in the **Description** field to help distinguish this benefit from others.
4. Select a type from the **Type** dropdown list. To add a new type here, click the **Add** button. For more information about adding a benefit type, see [Creating Benefit Types](#).
5. Optionally, select a carrier from the **Carrier** dropdown list. To add a new carrier here, click the **Add** button. For more information about adding a carrier, see [Creating Benefit Carriers](#).
6. On the Coverage tab, add a coverage with the following steps:
  - a. Enter a name for the coverage in the **Benefit Coverage Name** field.
  - b. In the **Monthly Employer Cost** field, enter the amount that your company will pay for the benefit per employee every month.
  - c. In the **Monthly Employee Cost** field, enter the amount that the employee will pay for the benefit every month.

Note that the **Monthly Total Cost** field is updated with the sum of the two monthly cost fields.

 **Note:** If you change either of the monthly cost fields after you have assigned this benefit to an employee, you are prompted to choose whether or not to apply this change to the affected employees.

7. If you use NetSuite Payroll, on the **Deduction** tab, select the payroll item to associate with this benefit. This represents the deduction that will be applied to employees' paychecks. You can only add one payroll deduction item to a benefit. Before setting up benefits, you should create the required payroll deduction items. For more information, see the help topic [Creating Payroll Deduction Items](#).
8. If you use NetSuite Payroll, on the **Employer Contribution** tab, select the payroll item to associate with this benefit. This represents the employer contribution that will be applied to employees' paychecks. You can only add one payroll employer contribution item to a benefit. Before setting up benefits, you should create the required payroll employer contribution items. For more information, see [Creating Payroll Employer Contribution Items](#).
9. Click **Save**.

## Assigning Benefits to an Employee

A benefit is a specific, non-wage compensation item provided to an employee. When you create a benefit, you associate it with a benefit type, carrier, and coverage. You also specify the monthly employer and employee costs for the benefit so that you can track these figures for your company. After you have defined the benefits that employees in your organization can have, you assign them to employees.

### To assign a benefit to an employee:

1. Go to Lists > Employees > Employees.
2. Click **Edit** beside the employee you want to assign a benefit to.
3. Click the **Benefits** tab.
4. Select a benefit from the **Benefit** dropdown list.
5. Select a type of coverage from the **Coverage** dropdown list. The items here are the ones associated with the selected benefit.
6. When you select a coverage, the **Monthly Employer Cost** and **Monthly Employee Cost** fields are automatically populated with the values from the selected coverage. To override those values,

click one or both of the fields and enter new values. When you change those fields, the **Monthly Total Cost** field is updated automatically.

7. Click **Add**.
8. Click **Save**.

## Benefits Tracking Reports

The Benefit Tracking SuiteApp includes three reports that you can use to retrieve, present, and analyze your benefits data:

- [Employee Benefit Coverage Report](#)
- [Employee Benefit Cost Report](#)
- [Employees Without Benefits Report](#)

You can also customize these standard reports in the Report Builder by clicking **Customize** on the results page. For more information, see the help topics [Report Builder Interface](#) and [Report Customization](#).

### Employee Benefit Coverage Report

The standard Employee Benefit Coverage report shows the benefit type, benefit, carrier, and coverage for each employee across all classes, departments, locations, and subsidiaries. You can use this report to quickly see an employee's benefits coverage.

To view the Employee Benefit Coverage report, go to Reports > Benefits > Employee Benefit Coverage.

The standard Employee Benefit Coverage report shows the following columns:

- Name (sorted ascending by default)
- Job (if you are using the Job Management feature)
- Supervisor
- Class
- Department
- Location
- Subsidiary
- Country
- Benefit Type
- Benefit
- Carrier
- Coverage

To customize this report and display it in the Report Builder, click **Customize**. For more information, see the help topic [Report Customization](#).

### Employee Benefit Cost Report

The standard Employee Benefit Cost report shows the benefit type, benefit, carrier, employee cost, employer cost, and total cost for each employee across all classes, departments, locations, and

subsidiaries. You can use this report to quickly see how much an employee's benefits are costing both the company and the employee.

To view the Employee Benefit Cost report, go to Reports > Benefits > Employee Benefit Cost.

The standard Employee Benefit Cost report shows the following columns:

- Name (sorted ascending by default)
- Job (if you are using the Job Management feature)
- Supervisor
- Class
- Department
- Location
- Subsidiary
- Country
- Benefit Type
- Benefit
- Carrier
- Employee Cost
- Employer Cost
- Total Cost

To customize this report and display it in the Report Builder, click **Customize**. For more information, see the help topic [Report Customization](#).

## Employees Without Benefits Report

The standard Employees Without Benefits report shows the employees who do not have benefits assigned to them. To appear in this report, employees must:

- Be Active
- Have a Termination/Release Date in the future or blank
- Have no benefits assigned

To view the Employees Without Benefits report, go to Reports > Benefits > Employees Without Benefits.

The standard Employee Benefit Cost report shows the following columns:

- Name (sorted ascending by default)
- Job Title
- Supervisor
- Class
- Department
- Location
- Subsidiary
- Country (from Subsidiary)

To customize this report and display it in the Report Builder, click **Customize**. For more information, see the help topic [Report Customization](#).

# Importing Benefits Information from Carriers

You can import benefits information from benefits carriers using the CSV Import feature. For more information, see the help topic [Importing CSV Files with the Import Assistant](#).

## To import benefits information from a carrier:

1. Go to Setup > Import/Export > Import CSV Records.
2. On the Import Assistant page, select **Custom Records** from the **Import Type** dropdown list.
3. Select the benefits-related record you want to import from the **Record Type** dropdown list. Select one of:
  - Benefit
  - Benefit Carrier
  - Benefit Coverage
  - Benefit Deduction
  - Benefit Employee Contribution
  - Benefit Type
  - Employee Benefit
  - Staging
  - System Propagate Cost
4. Select the **One File to Upload** radial button.
5. Click **Select** and locate the file you want to upload.
6. Click **Next**.
7. On the Import Options page, select **Add or Update**.
8. Expand the Advanced Options and check the **Run Server Suitescript and Trigger Workflows** box.
9. Click **Next**.
10. On the Field Mapping page, confirm that the fields in your CSV file are mapped to the correct fields in the custom record. Click **Next**.
11. On the Save mapping & Start Import page, you can optionally enter a map name, description, or script ID. To save the mapping, enter at least a map name and click **Save & Run**. To run the import without saving, click **Run**.
12. On the Job Status page, click **CSV Response** to view the results of the CSV Import, including any errors.
